Or you can spend two grand on a radio and an antenna.

Big cities have repeaters and the reception is very FM-like.

From: FCC <noname@hotmail.net>
Message-ID: <em4lc1l69v1hqt34mcd9h12s6r5jph1ee9@4ax.com>
Source record: 26372

How noble! WORDS do sound noble. I think we have a mixture of truth
and fiction below. Both deserve to be considered fairly...

I think it is a bit puffy to say that 1776 was all about religion and
revolution when a lot more of it had to do with MONEY!

The Pilgrims may have come here partly to seek religious freedom, but
the revolution was ALSO about avoiding paying taxes to pay off
LOANS from the banks for funding the war to kick the FRENCH out
of most of North America. The Colonials didn't want to PAY.

England didn't have the money. Bottom line - up the taxes.
It seems kind of naive to say that they didn't think there would
be a war!
Call it rebellion or call it revolution, it amounted to the same
thing.
Oh - and many historians believe that at least 55% of the Colonials
here were Loyalists at the time!

Some things are changing here too:
"In America, we hold our founding documents, the Declaration of
Independence

>In America, we hold our founding documents, the Declaration of Independence
>and the Constitution, to be above any person or party."

Are you sure we ALL do? Many Republicans now openly accuse anyone
who is from another party of being against the USA or against the
Constitution. Using that " L word" etc.

YMMV

Don't be absurd!

The President frequently refers to USA as "America."
Most Europeans know what they are talking about when they say
"America."
It's not usually taken as such a big insult by the Brazilians as you
may think.

Words have meaning, but a lot is understood by how you use them.

People who are old enough probably have a different
opinion of the term "Goldwater conservative" than
people to whom Goldwater was lovable old maverick
senator in his last decade in the senate.

Yesterday, my wife and I took the family to go see the new IMAX film in our area, on the International Space Station (ISS). The film was well done (with the exception of listening to Tom Cruise narrating while his well publicized mid-life crisis is ongoing), and there was an interesting amateur radio component as well.

It's probably well known in ham circles that you can talk to the astronauts from time to time in a special ham session, but one was actually shown on the IMAX film. I'm sure that it surprised some people who will see the film that you can actually do that.

It's actually nice to see kids using amateur radio for a change, instead of what we've been subjected to (old farts, a dying hobby, etc.) for the past age or so.

Tell you what, Tony -- you go up to any Canadian, Mexican or Brazilian
you happen to meet, and call them "American." See if they're insulted
by that.

<< It's probably well known in ham circles that you can
talk to the astronauts from time to time in a special
ham session, but one was actually shown on the
IMAX film. I'm sure that it surprised some people
who will see the film that you can actually do that >>

back when the MIR was still orbiting earth, I and several friends had a
few QSO's with them on Packet radio, nothing like getting to talk via
keyboard to our russian friends in space. I lost the copies I had of
these, but one friend still has the text file of his and my "talks"
with MIR...

It was in real life. It happened during the first crew
stayover in the ISS.

>USA. Thanks for any tips/advice.

The sad fact is that the BBC has, in just the last year or two, cut out
shortwave broadcasting aimed at North America and you can't get reliable
reception of a lot of the programs in their schedule.

For example, the only time I can pick up their "World of Music", a
half hour of world music by Charlie Gillett is in the dead of
night on a frequency (15360 kHz, from Singapore, aimed at Japan) that
will quit working as the seasons change.

Ja, aber vee ver diskossing se Shermann ekvipment.

I am from Denmark, so my homepage and my email is Danish. But I do believe that I can write about German equipment on my Danish homepage? Maybe even in English? You see, my German is a bit rusty, I have not got a .de (sub)domain and I cannot imagine you learning Danish just to look at my page ;-)

Oh, one more thing: LC filters has hardly been cutting edge technology since the 19th century - I think even the Americans had heard of them at the time of WWII :-)

Good point Mark, but if THAT isn't the case, we will think of some
other way to categorize them as terrorists, which justifies ANY
torture we want to give them. If those were Americans we would
be thumping the table really hard... or WOULD we?

Pragmatically, the guy must submit an explanation because somebody reported
him to FCC, most likely via ARRL. No, "they" are not listening on 11 meters
nor apparently on 75. But I'd be willing to bet that if you recorded some
of this activity so that the 'culprits' could be identified then reported it
to your ARRL Official Observer Coordinator that they too could get a note
from the FCC.

Actually, the Supreme Court simply refused to make a blanket rule stating that "economic development" is never a "public purpose." They were being asked to interpret the "public purpose" clause in the Fifth Amendment to take away all discretion concerning "economic development" and, thank goodness, they refused to do so. It is up to local governments to make their own policies concerning eminent domain for economic development. So, just as it has been for over 200 years, it is up to citizens to participate in the process, not just bitch about what happens when they don't.

Hello, John

Well, I had an interesting discussion in another group. Too bad one news article has disappeared or I'd send you the URL where a black guy got 35 years for stealing a black and white television set.

That aside, I can fairly safely assume you lean towards the French.

Here is part of the discussion I had, along with a URL from a friend in England:

********** begin copy *********
Hmmmm, Jim you're right, and the way this afternoon has unfolded; international tact and diplomacy wouldn't appear to be high up on my list of assets either! Mind you Jacques Chirac has been very rude about Finnish food too!
http://www.theaustralian.news.com.au/common/story_page/0,5744,15835185%255E2703,00.html
Simon

********* end copy *********

So happy to understand that your, along with the French, believe your thoughts are higher and more important than everyone else's.
:)

Too bad I hadn't seen your post to get my dander up a bit earlier or the person that insulted Simon would have been toast in that group. Instead, I waited to see if the thread would cool down. Fortunately, the thread cooled and the woman who insulted him is still a member.

Don't worry; you're not alone. Here in Rochester, NY, christian (and I use the lower case as I don't believe their beliefs lie along the lines of that left-leaning guy that was crucified 2000 years ago - you know the guy; the one who threw the money changers out of the temple.) churches are now asking their congregations to dress in camouflage and have a missile in their sanctuary!

Here is that URL:
http://www.wokr13.com/news/local/story.aspx?content_id=DD427162-B871-4F38-A532-6ACBD4CA684D

I send that information to you so that you know that I and many others truly understand what you and your ilk are about.

73 from Rochester, NY
Jim

Jim:

You got me sized up alright. Too bad the guy only had to do 35 years
in prison, too bad it was not life (but, only if he had priors--which
I would almost be certain he did!)

John

Can anyone tell me if the 2005 WRTH lists urls and email addys for the worldwide broadcasters?

Thanks.

katman

you freaky-deeky

i would beat you silly if you just looked sideways at a child of mine

if i lived in your community i would be outside your house with a
warning sign right now

Shit is in the dictionary. I found shit in the American Heritage
Dictionary, 1975. Shit means: To deceive or mislead, among other
things.

Why is everybody so uptight about shit?

If you had been born in China you would understand that the Chinese
Communist Party
has long discarded any adherence to Marxist ideology. The CCP writes the
rules
to suit itself and nothing more. Your argument carries no analogy.

I don't know if he was talking live on air or if it was a rebroadcast from another frequency, but yesterday 7/4/2005 I heard Bro. Stair on WWCR 5070 say he'd not be on "this frequency after this month" - unless I'm badly mistaken.

I *think* he is ONLY ON 5070 with WWCR right now. If his contract with them expires at the end of July he just may be leaving WWCR for good. He'd deny it, but he's a bit miffed because they sold some of the other time he had to others who were willing to pay a higher price. He'd had it at a great discount for a looonng time.

I had tuned to 5070 for David J. Smith who comes on at 07:00 EDT / 11:00 UTC so it was probably about 06:45 EDT / 10:45 UTC when this was heard. If it is correct he'll probably repeat it a number of times before this month is up. The idea was to be sure and get a list of the other frequencies he could be found on.

I suppose we'll know for sure in about a month.

I've resigned myself to listening to Stair on WWRB. 9320, daytime, hasn't been coming in very well for quite some time. 6890, evenings, is probably doing best. 5085 and 3185, overnight, have been very sporatic. I've neglected to check 5070. When I need to hear Stair, and the reception just isn't there, I've been utilizing the Windows Media Player, via his website.

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio.

Who do you think attacked you? It sure wasn't Hussein. It wasn't Afghanis, either. The alleged kidnappers were from Saudi Arabia and a surprising number of THEM are showing up alive and well.

(Lord, forgive me for responding) but Gen. 12:2 says "a great nation" (goi gadol in the Hebrew). Unless you have another source.

And I would conjecture that it's not J-hating going on, but concerns about the various atrocities committed in his name. Doesn't seem a bad fellow in my book, but that dang Paul came along and all Hades broke loose.

I couldn't resist. I will get back to talking about SW.

you should be looking Heterosexuals or men that can't deal with being
bi or or gay, not those who are comfortable with theier sexuality

Meaning in term of statitstics you are more like guilty of those
molestations than I

Yeah, the ergonomics and weird face layout turn some people off. I know
that I'm happier with the 1102.

You're right - partially! :-)

Gen. 12:2 says, "...a great nation"

Gen. 17:20 says the same for Ishmael. He's talking to Abraham and says that Ishmael will also be A GREAT NATION. BUT (v. 19) Sarah is to bear a son [after passing the time of child bearing by many years] whose name shall be called Isaac and "...I will establish my covenant with him for an everlasting covenant, and with his seed after him."

20 And as for Ishmael, I have heard thee: Behold, I have blessed him, and will make him fruitful, and will multiply him exceedingly; twelve princes shall he beget, and I will make him a great nation.

21 But my covenant will I establish with Isaac, which Sarah shall bear unto thee at this set time in the next year.

Ge 21:18 Arise, lift up the lad, and hold him in thine hand; for I will make him a great nation.

Ge 46:3 And he said, I am God, the God of thy father: fear not to go down into Egypt; for I will there make of thee a great nation:

To Moses God said,

Ex 32:10 Now therefore let me alone, that my wrath may wax hot against them, and that I may consume them: and I will make of thee a great nation.

NOW:

Abraham begat Isaac and Isaac begat Jacob whose name was changed to Israel. Jacob/Israel begat Joseph who was sold into Egyptian slavery where be became a great ruler and saved Egypt, and his own family, from starvation.

In Genesis 48 Jacob/Israel blesses the two children of Joseph and this is what is said. Pay close attention to verse 19. Some believe that Joseph's two children became the nations of the United States of America and Great Britain.

14 And Israel stretched out his right hand, and laid it upon Ephraimï¿½s head, who was the younger, and his left hand upon Manassehï¿½s head, guiding his hands wittingly; for Manasseh was the firstborn.

15 And he blessed Joseph, and said, God, before whom my fathers Abraham and Isaac did walk, the God which fed me all my life long unto this day,

16 The Angel which redeemed me from all evil, bless the lads; and let my name be named on them, and the name of my fathers Abraham and Isaac; and let them grow into a multitude in the midst of the earth.

17 And when Joseph saw that his father laid his right hand upon the head of Ephraim, it displeased him: and he held up his fatherï¿½s hand, to remove it from Ephraimï¿½s head unto Manassehï¿½s head.

18 And Joseph said unto his father, Not so, my father: for this is the firstborn; put thy right hand upon his head.

19 And his father refused, and said, I know it, my son, I know it: he also shall become a people, and he also shall be great: but truly his younger brother shall be greater than he, and his seed shall become a multitude of nations.

There is MUCH more that could be said here like who really discovered America and why in New Mexico there's a stone with the Ten Commandments on it in beautiful flowing ancient Hebrew - not the square boxy letters currently used.

One might even look up the word Caucasian and see where it came from.

One might also consider the names of many of the places where the "lost" tribes traveled, their sailing ability, and why someone else might pretend to "find" America in 1492, many hundreds of years after the white man was already hear.

Look up "Ica Stones."

Look "Pillar Stone"

Better still, Look up "Pillar Stone" & coronation.

Even better yet, maybe. :-) Look up "Lia Fail Stone" & coronation

Did you know that the Kings & Queens of England have been able to trace their lineage all the way back to king David, and thus to Jesus Christ? A study of the above just might reveal that -- and prove the Scriptures which say that David will not cease to have someone on the throne until the return of Jesus Christ. For this reason, I predict that Great Britain will NOT join the EU, because that would probably

require that they relinquish their headship of the country. ....But I could be wrong. They *may* be able to join the EU and still retain title to the throne. I just don't see exactly how that can be done.

Goood day!

Darren,

This my not exactly be promoting SWLing but you could get off some of that old rusty money you're hiding and get one of his satellite dishes and be able to get him - and Pastor Peters - crystal clear! :-)

I think he was "giving for an offering" them away for about $175 at one time. Pastor Peters is requesting $185. Seems Bro. Stair was requesting just over $200 last time I heard, which was not very recently. Perhaps he has a different supplier now. Best check with him first. It could be on his web site. I could easily be wrong! :-(

I'll say! We have a mainland Chinese guy at work. He spends half the day photocopying oil field equipment blueprints and schematics, which he then takes home nightly. He NEVER brings anything back.

This is a real moral dilemma. Should I borrow fifty bucks from him before I turn him in to the Feds? Having just learned that there are over a thousand communist Chinese spies in North America, the odds are pretty good that he is one.

I think I'll make it hundred bucks...

Message-ID: <11cmm4gangfm2e5@corp.supernews.com>
Source record: 26644

Amplified Bible, Gen 48:3-5, "3 ☐And Jacob said to Joseph, God Almighty appeared to me at Luz [Bethel] in the land of Canaan and blessed me☐

4 ☐And said to me, Behold, I will make you fruitful and multiply you, and I will make you a multitude of people and will give this land to your descendants after you as an everlasting possession. ☐[Gen. 28:13-22; 35:6-15.]

5 ☐And now your two sons, [Ephraim and Manasseh], who were born to you in the land of Egypt before I came to you in Egypt, are mine. [I am adopting them, and now] as Reuben and Simeon, [they] shall be mine.☐

Verse 4: Amplified, "...multitude of people"

V.4, NASB, "...company of peoples..."

v.4, KJV/AV, "...a multitude of people..."

v.4, Young's Literal, "...an assembly of peoples..."

v.4, Septuagint, "make thee a multitude of nations..."

v.4, Ferrar Fenton Bible, The Holy Bible in Modern English, "...an assembly of nations..."

Actually, the Ferrar Fenton Bible says, v.3, "...and Jacob said to Joseph, 'The ALMIGHTY GOD appeared to me on my departure from the land of Canan, and blessed me (v.4) and said to me; 'I will make you flourish, and increase your family, and make you an assembly of nations; and I will give this land to your race after you as a possession for ever!'...

Now's a good time to mention it! July 4, 1776, AMERICA became a nation in a day, just as Israel became a nation in a day back in 1948.

America has an eastern sea and a western sea as described in Zechariah 14.

America has UNWALLED villages - at least in most places.

3009. Degen news

Newsgroup: rec.radio.shortwave
Date: 2005-07-06 04:14:42 UTC
From: Conan Ford <conanford@com.hotmail>
Message-ID: <Xns968AE24B123C7conanfordhotmailcom1@24.71.223.159>
Source record: 26647

From www.radiointel.com

1) Apparently the Degen DE-1106 will not be sold as such, it has been sold to a foreign company. I assume that this means Degen will produce it and sell it to a company like Eton.

2) The Degen DE-1104 has been announced, analog tuning, dual conversion, with a numeric frequency counter. Supposedly the same performance of the DE-1103 but with analog tuning.

I am surprised that a radio with "4" in the name would be produced, since the word for "4" in both main Chinese dialects sounds the same as the word for "death," and thus is considered unlucky. However, it sounds like such a radio is most suited for the mass Chinese market, more so than a radio like the 1103, which is probably quite expensive by Chinese standards.

Selling the rights to the DE-1106 to someone like Eton makes sense, they can probably profit more from it that way. I know, maybe it will replace the E1!

Propagation for the last week or so since 6/25 has been pretty good.
Sometimes to good as co-channel interference has been strong on the 9
and 11 MHz bands at times.

Wish I had more time to listen but I have been busy with family events.

I was listening to radio China's business update on the 9 MHz band this
morning and they did not sound so strident. I think oil and China are
going to become a bigger issue for us than Iraq and the war on terror.

The opening shot has been buying our debt of which they are the majority
holder.

This is just the second shot on us using the piles of US dollars they
have accumulated.

More to come just keep buying Chinese made stuff.

(Bit more info from www.radiointel.com)

1. DE1104 is unique with a lot of functions - analog and digital
(PLL).
2. Performance claimed to be the same as DE1103 but with a lower price
than the, DE1102, DE1103, DE1105, and only more expensive than DE1107.
Hence it has a high cost/performance ratio.
3. DE1104 will go to market the same time as it does in the U.S.

The U.S. version will have additional Air Band and Weather band
function and will not sell on the China market. From now on new Degen
radios will go to U.S. market at same time as in China.
4. Development of the DE1104 is complete and will go into production at
this time.

If your thinking of buying an HP computer product....DON'T !

HP has gone to India for all it's telephone Customer
Support and they all speak bad English and you can't
understand a word they are saying.

Buy an HP....
Have a problem...
Call up their Tech Support hotline....
You'll get "Pasheesh-from-Punjab" who talks like
he's got a mouthfull of marbles and can't understand
a word your saying because he'e been trained to
read from a script like a trained spider monkey....

(HINT: You'd be better off calling Habib at the local Dunkin-Dounutz for
tech support..)

---> F*CK Hewlett-Packard!! (another formerly great USA company that's
now frigged it's historic reputation for great customer service by
going to half-ass
overseas tech support in)

Buy someone else's product instead and tell HP (..and Aglient Technologies
too!)
to go do somehing with themselves and their crap products and support.

Signed: a former HP Business/Commercial customer.

Technically, and scientifically, it would probably be quite correct to say
that virtually all of his large intestinal volume really is 100% full of
real shit. Possibly a large fraction of his small intestins, too,
depending on your definition of shit. After death, you ain't worth shit
anyway (except maybe a dollar's worth of calcium, iron, etc.).

There are exceptions (eg. just before colonoscopies, sigmoidoscopies,
situations of that nature, etc.)

I think everyone's shit stinks. So does everyone's gas. Bad breath is not
too nice, either. We all get BO sooner or later, too.

;-)

ACTUALLY.......I hear that his wife caught him in bed with another woman
recently. Now she wants a divorce, and is in
a good position to take him thru the ringer, because Maine is a community
propery state, which means half of everything
they got after getting married is hers. I hear also he my try and sell the
radio station because of this.

First time that WRTH has mentionned url was in the 1996 edition. But the email
are not mentionned.

The latest WRTH 2005 is full of URL's and e-mail addresses, even for the
smallest and remotest little countries and stations.
It is the most comprehensive source of info for serious DXer's hunting down
the rarest of catches.

It is going to be tough boys, you are going to have to tighten your belts for your country, we have to provide excessive profits for out buddies in the large corporations and the friends of our noble families who need a standard of living approaching that of royalty (did you ever notice my dad was president too, we are the beginning of a blue-blood line of royalty, respect that.)

We just have to outsource these jobs to the people of the world who are left to take advantage of, your fellow americans have become too educated to work as slaves and live in poverty.

If things really get tough for you here, catch a boat to india or china, we will have a job for you there, just tell them george sent you.

Have you ever been to mexico, you might want to try there, it is closer and they have great tacos there for lunch... although smuggling drugs across the border is highly dangerous, it does provide big lucrative returns if you do not get caught.

Don't be afraid to try something new...

3050. lumped balun

Newsgroup: rec.radio.shortwave
Date: 2005-07-06 21:28:42 UTC
From: balajisu <bsubrama@gmail.com>
Message-ID: <1120685321.956363.288360@z14g2000cwz.googlegroups.com>
Source record: 26488

hi guys

i'm trying to characterise a Minicircuits balun from 10ohz to 40mhz.
and also trying to design a lumped elements balun with similar
performance of the characterised balun from MiniCircuits.

I'm trying to synthesis the balun using Genesys tool.
I have ocme to a conclusion that i won't be able to achieve the balun
for the whole range.

I jus have a crazy thought.. if incase i design three balun
corresponding to these bands -100hz to 1mhz , 1mhz to 10mhz and 10mhz
to 40mhz. Is there anyway i can combine these three structures to
achieve a balun which would from 100hz to 40mhz..

if you guys think the above idea is really crazy do pour in valuable
suggestions regardng this issue.

thanks

balaji

HB-4544, As Passed House, May 17, 2005

SUBSTITUTE FOR
HOUSE BILL NO. 4544

A bill to amend 1931 PA 328, entitled

"The Michigan penal code,"

by amending section 508 (MCL 750.508), as amended by 2002 PA 672.

THE PEOPLE OF THE STATE OF MICHIGAN ENACT:

Sec. 508. (1) Any person who shall equip a vehicle with a radio receiving set that will receive signals sent on frequencies assigned by the federal communications commission of the United States of America for police purposes, or use the same in this state unless the vehicle is used or owned by a peace officer, or a bona fide amateur radio operator holding a technician class, general, advanced, or extra class amateur license issued by the federal communications commission, without first securing a permit so to do from the director of the department of state police upon application as he or she may prescribe, A person [shall not carry or have in his or her possession in the commission or attempted commission
of a crime a radio receiving set that will receive signals sent on a frequency assigned by the federal communications commission of the United
States for police, fire fighting, or emergency medical purposes.]

(2) A person who violates subsection (1) is guilty of a crime as follows:
(a) If the underlying crime is a misdemeanor with a maximum term of imprisonment of less than 1 year, the person is guilty of a misdemeanor punishable by imprisonment for not more than 1 year or a fine of not more than $1,000.00, or both.

(b) If the underlying crime is a misdemeanor or a felony with a maximum term of imprisonment of 1 year or more, the person is guilty of a felony punishable by imprisonment for not more than 2 years or a fine of not more than $2,000.00, or both.

(3) (2) This section does not apply to the use of radar detectors.

Enacting section 1. This amendatory act takes effect 90 days
after the date it is enacted.

I've had good experiences lately with a HP PC problem and a HP printer
problem using the on-line chat option. Both problems were taken care of,
and quickly.

Anybody else getting the BBC on a regular basis? Especially in the midwest?
I am interested in news and general interest type programming.

Mark, is west coast SWL difficult anyway? That's what I've heard.

It sure does, looked at the 5 day projection, doesn't look good. I just hope it comes ashore before I have to go into work at Keesler AFB. The EMCS bunker is a nuthouse when hurricanes hit. They forget everything they learned the year before. I spent 26 hours straight in there last year during Ivan. I'm on high ground and far enough inland that I don't worry too much about my house. It has withstood everything since 1968 and that includes Camille. But, all it takes is one of those tornadoes inside the hurricane and it is all over. If it turns into a cat 4 or 5,

I'm outta here, heading north and find a motel/hotel for a few days.

Working people frequently ask retired people what they do to make their days interesting. I went to the store the other day. I was in there for only about 5 minutes. When I came out, there was a cop writing out a parking ticket. I went up to him and said, "Come on, buddy,how about giving a senior a break.

He ignored me and continued writing the ticket. I called him a Nazi. He glared at me and started writing another ticket for having worn tires. So, I called him a piece of dog sh*t. He finished the second ticket and put it on the windshield with the first. Then he started writing a third ticket. This went on for about 20 minutes. The more I abused him, the more tickets he wrote.

Personally, I didn't give a damn. My car was parked around the corner. I try to have a little fun each day now that I'm retired. It's important at my age.

Tesla built his remote controlled boat while living in US in the late 1800's. It certainly contained LC resonant circuits. However, finding resonant LC componenents in a linear power supply is highly unusual-especially in the ground side.Never seen this concept before.

Well, I'm not sure if it still matters what with the Global
Positioning System but if you're trying to navigate using accurate
time it helps to have atomic UTC and solar GMT co-ordinated and part
of the co-ordination is that they're kept within 7/10 second of each
other using leap seconds.

I can usually hear 9825 from Ascension aimed at SAm here in California
on my Yaesu, although it can be quite noisy at times. 9825 at 0200 has
world news. You might be able to get the Asian stream on 9740 in the
morning and on 15280/15360 for a few hours in the afternoon. Timing is
different though, with world news at 0000. 15280/15360 tends to fade out
by 0300 during the winter.
>
> Mark, is west coast SWL difficult anyway? That's what I've heard.

Depends on your definition. We can't get Africans. We can't get DW in
English. But we get lots of Asians, even clandestines like Sound of Hope
from Palau aimed at China. I got a Burmese clandestine once. We can get
the Middle East for a couple hours around sunrise their local time (0300
or so). I would think that places like Australia and up north where
Uncle Arnie is (northern Canada, Alaska, and other northern climes)
would be hardest.

3080. Al-Jazeera Launching All-English Channel

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 02:16:41 UTC
From: SWLer <Reply_Here@nowhere.com>
Message-ID: <X56dnQRlsP8UDVHfRVn-2Q@comcast.com>
Source record: 26568

Al-Jazeera Launching All-English Channel

By JIM KRANE, Associated Press WriterMon Jul 4, 1:41 PM ET

Al-Jazeera is nothing if not bold. It has fought repeatedly with Washington, which says its exclusive broadcasts of Osama bin Laden speeches show an anti-American, pro-terrorist bias. Its freewheeling broadcasts have decimated state-run TV stations across much of the Arab world, leading some countries to close its bureaus down. So what does such a network do next? Plan a massive expansion.

By March, the network will launch Al-Jazeera International, a satellite channel that will beam English-language news to the United States ï¿½ and much of the rest of the world ï¿½ from its base in tiny Qatar.

The ever-contentious Middle East will be its specialty. And the news, including coverage of Israel, will be served up from an Arab perspective, Al-Jazeera executives say.

With a touch of the evangelist, perhaps, the station's executives say their mission is nothing less than reversing the dominant flow of global information, which now originates on TV channels in the West.

"We're the first news channel based in the Mideast to bring news back to the West," said Nigel Parsons, managing director of Al-Jazeera International. "We want to set a different news agenda."

The station's research shows some of the world's one billion English speakers, including Americans, thirst for news from a non-Western perspective.

Outside America, the station plans to compete with CNN International and BBC World, the two chief English-language satellite news channels. The new station will be headquartered in Doha and operate broadcast newsrooms in London, Washington and Kuala Lumpur, Malaysia.

But breaking into the U.S. market, with its established channels, might be more difficult. The station's anti-American reputation may win some early "curiosity" viewers, Parsons said.

Overall, Al-Jazeera executives contend negative American opinions are based on "irrational and erroneous information." For instance, Parsons said, Defense Secretary Donald H. Rumsfeld lambasted the station for showing beheadings by Iraqi insurgents. Actually, Al-Jazeera has aired portions of insurgent videos but never a beheading, he said.

Another irritant is Al-Jazeera's often-gory coverage of Iraq from both perspectives. Before it was banned, the network embedded reporters with both Iraqi insurgents and with U.S. troops.

Nevertheless, Americans have shown curiosity. Al-Jazeera's English-language Web site gets most of its traffic from U.S. visitors, Parsons said.

In the end, Al-Jazeera might coax viewers from an elite segment of American TV watchers, perhaps those who tune into the BBC, some observers say.

But most Americans want to be comforted by the news, not challenged by it, said Jon Alterman, who heads the Middle East program at the Center for Strategic and International Studies in Washington.

If Al-Jazeera is a tough sell in the United States, it has natural audiences elsewhere. The world counts 1.2 billion Muslims, most of whom don't speak Arabic. That means Al-Jazeera stands to find quick popularity in countries like Pakistan, Indonesia and Malaysia.

Alterman believes Al-Jazeera will help integrate the world's far-flung Muslim communities, giving them a common news source.

That's not necessarily what the station is after. "We're not a Muslim channel," said Parsons, a Briton who, like many Al-Jazeera International staff, does not speak Arabic.

Indeed, the station is even less popular with governments in Muslim countries like Saudi Arabia, Iraq, Iran and Tunisia, which currently ban it.

Those countries' rulers suggest it incites violence by giving airtime to opposition politicians and radical clerics.

At one time or another, Al-Jazeera has had bureaus closed in 18 countries and its signal blocked in 30. Its revenues still suffer under an advertising boycott, believed to originate from Saudi government pressure.

The station has had three bureaus destroyed by bombings, two by the U.S. military.

Two staff in Iraq have been killed. Two others were locked in Iraq's Abu Ghraib prison and released without charge. A third is being tried in Spain on charges of working for the al-Qaida terrorist group.

Yet because it is based in Qatar, an energy-rich Persian Gulf country of less than a million, the station has little opportunity to upset its home government.

"They're in a unique position," said Mustafa Alani, director of security and terrorism studies at the Gulf Research Center in Dubai. "They can criticize everybody."

Arab viewers who previously had only staid state-run broadcasters to watch have apparently liked that, flocking to the station since its 1996 debut.

It now reaches more than 40 million viewers, and if it weren't for the advertising boycott, Al-Jazeera's network would bring in some $35 million in yearly ad revenue, enough to wean it from Qatar government money, said managing director Wadah Khanfar.

The station is expected to be privatized in a few years. But as long as it remains close to the Qatari royal family, the boycott poses few funding worries.

Yet despite its protests to the contrary, Al-Jazeera is already softening its aggressive coverage of Saudi Arabia and other countries, Alani believes. The reason? It must regain access to those countries to boost its English broadcasts, Alani said.

"If you're banned from half the Arab world, your ability to break news is limited," Alani said.

Mark Helmke
Senior Professional Staff Member
U.S. Senate Foreign Relations Committee
Richard G. Lugar, Chairman

Dear Mr. Helmke,

Your recent speech misstates the Congressionally-determined purpose of the Voice of America, and what it has "long been about," which you refer to simply as "promoting U.S. foreign policy." I refer you to the Voice's charter, a public law enacted by Congress in 1976.*

On a practical level, I don't think that anyone who wants to advance American interests can seriously believe that the way to do this is by redefining VOA's mission into State Department-run broadcasts "promoting" U.S. foreign policy.

This is because actual human beings, including those in unfree societies, find propaganda obnoxious and boring. And they find propaganda-dressed-as-"news" obnoxious, boring and dishonest. In either case, they will react to it instantly by tuning out -- and into anything else, from Al Jazeera to BBC.

Actual human beings do enjoy, however, the sound of a free press, fascinating features, reliable, impartial news of the world and their regions, and free music of all kinds -- the best of America -- coming at them from the United States. That's the way to capture people's interest and liking. They enjoy this enough that they'll even listen to short editorials, too.

A program of State Department vanity broadcasts might stroke a few Washington egos, but it wouldn't do a whit to help America abroad.

Sincerely,

Carolyn K.A. Weaver

*The VOA Charter

To protect the integrity of VOA programming and define the organization's mission, the VOA Charter was drafted in 1960 and later signed into law (Public Law 94-350) on July 12, 1976, by President Gerald Ford. It reads: The long-range interests of the United States are served by communicating directly with the peoples of the world by radio. To be effective, the Voice of America must win the attention and respect of listeners. These principles will therefore govern Voice of America (VOA) broadcasts.

1. VOA will serve as a consistently reliable and authoritative source of news. VOA news will be accurate, objective, and comprehensive. 2. VOA will represent America, not any single segment of American society, and will therefore present a balanced and comprehensive projection of significant American thought and institutions. 3. VOA will present the policies of the United States clearly and effectively, and will also present responsible discussions and opinion on these policies.

3082. PLEASE Support Uncensored Broadcasts to China

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 02:19:57 UTC
From: NTDTV <feedback@ntdtv.com>
Message-ID: <11cp4cark7eub57@corp.supernews.com>
Source record: 26570

We started the NTDTV satellite channel http://www.ntdtv.com because we believe that anyone, anywhere has the right to communicate with anyone, anywhere. We believe that especially people of Chinese origin need a forum for dialogue as never before, just as the citizens of China need free flow of information with the rest of the world. We have worked hard to use digital and satellite technologies to enlarge the communication space among Chinese people everywhere.

What Happened?
http://www.ntdtv.com/xtr/eng/eutelsat/what_happened.htm
[Please click links on the left side column for complete details]

One year ago, NTDTV made a business partnership with Eutelsat to transmit NTDTV's signal to Asia and China. Since then, NTDTV is the only non-governmental TV that broadcasts to China uncensored and in Mandarin. Working closely with Eutelsat, we opened a historic "open satellite window" in the great wall of information control that is forcibly maintained by Beijing. Through that open window we have broadcast a wide variety of programs, including the European Union debate about China policy as well as many messages sent expressly to our Chinese viewers on the Eutelsat W5 Asia Beam by dozens of elected European leaders. We broadcast, "live" and in simultaneous translation, the US Presidential debates which had an immense response from our viewers in China. We broadcast programs on human rights in China, Article 23 in Hong Kong, economic development and corruption, traditional Chinese culture, and so much more.

Now we are just days away from Eutelsat stopping NTDTV's transmission to Asia and China. Eutelsat is preparing to slam shut the "open satellite window" this week. Instead of expanding the historic opening of the world's largest society to the free flow of broadcast information, Eutelsat is choosing to help Beijing reassert full content control over satellite broadcasting. In fact, Eutelsat's Chairman, Mr. Giuliano Berretta has recently signed what Eutelsat called a "historic partnership agreement" with the same agency of the Chinese Government that instructed Eutelsat to remove NTDTV from the W5 Asia Beam. And Mr. Berretta is primed for still more favors from Beijing, in return for putting Eutelsat's Inter-Governmental Convention as well as various European and international conventions in the company shredder.

One year ago, when NTDTV started making a business partnership with the European satellite industry, we took seriously Europe's largest satellite company, Eutelsat, when its leadership assured us that they would not cancel NTDTV's transmission to Asia -- no matter how strong the political pressure from the Chinese or other authorities, and no matter how large the economic incentives. We were honestly impressed last April when Eutelsat's Chairman,

Mr. Berretta, gave the NTDTV Board his personal guarantee that hewould never remove our channel from his company's satellites. The European values of pluralism and fairness are embedded in the legal Convention that governs Eutelsat, he said. Respect for pluralism is a vital factor that distinguishes Eutelsat from the rest of the satellite industry, he said. It would need an order of the highest court in France to make him remove our channel, he said.

Eutelsat has been under tremendous political and economic pressure from the Chinese Communist government since it began NTDTV's Asia broadcast last year. Under this pressure, Eutelsat decided not to renew NTDTV's Asia broadcast transmission contract this year.

Your help carried us through the first termination deadline and brought Eutelsat to the negotiating table. Your help carried us again though the first month of negotiations and another shutdown threat.

Your continuing help is still absolutely essential to carry us through the rest of the negotiation until an agreement that can protect NTDTV's long-term and uncensored Asia broadcast is reached.

You can support NTDTV in many ways, including:
-- Sign the on-line petition (or hard-copy version circulating in your community) to President Bush
http://www.ntdtv.com/xtr/eng/eutelsat/petition.htm

-- Contact your elected representatives to ask their support
http://www.ntdtv.com/xtr/eng/eutelsat/eutelsat_public.htm

-- Contact Eutelsat investors and board to support continuation of NTDTV's Asia broadcast: http://www.ntdtv.com/xtr/eng/eutelsat/eutelsat_board.htm

-- PLEASE CONTRIBUTE to the NTDTV satellite fund so that we can purchase our own platform:
Online Credit Card http://www.ntdtv.com/xtr/donation/ccpayment.htm

OR by Check: http://www.ntdtv.com/xtr/eng/eutelsat/Funding/fund_overview.htm
Please make checks payable to "New Tang Dynasty TV."
Please mail your checks to NTDTV headquarters:

New Tang Dynasty TV
Suite 1200, 229 W. 28th Street
New York, NY 10001

For donations that do not specify "NTDTV Broadcasting Fund," NTDTV will allocate them as general-purpose donations. Please clearly note your name and address, so NTDTV can mail you a receipt for tax return purposes.

Wire Transfer:

To: Citibank, N.A.
AA/23rd Financial Center
717 Avenue of the Americas
New York, NY 10010

Account Name: New Tang Dynasty Television
Account Number: 74426741
ABA Routing Number: 021000089

Anonymous Donations:

Please submit a money order (available at banks or post offices) for anonymous donations (for relatively small amounts). Please use Bank Check or Cashier's Check if the amount is relatively large. For donations that do not specify "NTDTV Broadcasting Fund," NTDTV will allocate them as general-purpose donations. Please clearly note your name and address, so NTDTV can mail you a receipt for tax return purposes.

Please mail your money order, bank check or cashier's check to:

New Tang Dynasty TV
229 W 28th St. Suite 1200
New York, NY 10001

For security purposes, donors in Mainland China, please use the anonymous donation method or donate through overseas channels.

If you have any questions, please call the pledge hotline: 1-888-260-6221.

NTDTV will acknowledge donors (except for anonymous donors) on its web site, where it will periodically publish donors' names and amounts of their donations.

THANK YOU FOR YOUR SUPPORT OF FREEDOM IN CHINA!

IMPARTIAL BROADCASTS? - (LETTER TO THE EDITOR, NEW YORK TIMES, JULY 3):

"The Armstrong Williams NewsHour," by Frank Rich (column, June 27) by deploying the word "propaganda," does a great disservice to the more than 140 million people worldwide who look to entities operated by the bipartisan Broadcasting Board of Governors -- the federal body that supervises all nonmilitary international United States media outlets, Voice of America included -- for their reliable news and information.

Steveo:

Ever since my buddy ronnie regan closed down the mental wards (nut houses) in california you have been harassing people at random. Give them a bit of a break son, do it for your president, your congress, your supreme court, your country and your fellow citizens.

I know you are a bit peeved about the lack of resources to handle you particular condition. Be patient, as soon as rummy and me can wrap up our little "death for oil" business venture in the middle east, perhaps we can squeeze out a few bucks and take care of you.

Just concentrate on holding together that declining mental condition of yours for another decade or so and we will get to you son.

Read my lips, "We will leave when we have the oil."

Sent: Friday, July 01, 2005 4:22 PM
Subject: WINNING THE WAR OF IDEAS WITH POP MUSIC (SURE) - ROBERT SCHADLER

WINNING THE WAR OF IDEAS WITH POP MUSIC (SURE) - ROBERT SCHADLER, FORMER CHIEF OF STAFF, U.S. INFORMATION AGENCY, WASHINGTON (LETTER TO THE EDITOR, WALL STREET JOURNAL, JULY 1): "Your page-one article 'Propaganda: Sparking Debate, Radio Czar Retools Government Media' (June 20) [PDPR, June 20] got nowhere near the real crux of the controversy over Norman Pattiz's leadership in transforming U.S. government broadcasting into pop music stations. It isn't a matter of AM or FM frequencies, or of reforming a supposedly sclerotic government agency, the VOA, or of his munificence to the Democratic Party. It is about the conception of the mission of U.S. public diplomacy. Mr. Pattiz is widely quoted as saying that 'MTV brought down the Berlin Wall' -- not Solzhenitsyn, not John Paul II, not Vaclav Havel, not Lech Walesa, not Ronald Reagan, not the ideas and ideals they represented. Based upon this curious assumption, Mr. Pattiz eliminated the content from VOA's Arabic and Farsi programming and replaced it with pop music nearly all the time. Is transforming the war of ideas into the "battle of the bands" a winning strategy? Your article points to the high listening rates Radio Sawa claims (and others dispute) in countries like Morocco. But it neglects to mention that the approval rating of the U.S. is at historic lows, with some key countries such as Jordan and Egypt registering in single digits. There are surely other, larger causes for this, but whether Radio Sawa is itself a source of unfavorable views of the U.S. is more plausible than the contrary. In 1987, the Hezbollah abductors of American journalist Charles Glass were listening to Michael Jackson and Madonna during their depredations. Does Mr. Pattiz think that Brittney Spears and Eminem, both staples of Radio Sawa, can succeed where Madonna failed? We don't teach civics to American teenagers by asking them to listen to pop music, so why we expect Arabs to learn about America or democracy this way defies reason."

This is ..... "the slightly larger version that was submitted with a good sentence at the end that they cut out."

Best,

Bob Schadler

To the Editor:

Neil King?s story (WSJ 6/20) got nowhere near the real crux of the controversy over Norman Pattiz?s leadership in transforming US government broadcasting into pop music stations. It is not a matter of AM or FM frequencies, or of reforming a supposedly sclerotic government agency, the VOA, or of his munificence to the Democratic Party. It is about the conception of the mission

of US public diplomacy.

Mr. Pattiz is widely quoted as saying that ?MTV brought down the Berlin Wall? ? not Solzhenitsyn, not John Paul II, not Vaclav Havel, not Lech Walesa, not Ronald Reagan, not the ideas and ideals they represented. Based upon this curious assumption, Pattiz eliminated the content from VOA's Arabic and Farsi programming and replaced it with pop music (in Radio Sawa, 50 minutes of the hour).

Is transforming the war of ideas into the "battle of the bands" a winning strategy? Mr. King points to the high listening rates Radio Sawa claims (and others dispute) in countries like Morocco but neglects to mention that during the same period, the approval rating of the US is at historic lows with some key countries such as Jordan and Egypt registering in single digits! There are surely other, larger causes for this but whether Radio Sawa is itself a source of unfavorable views of the U.S. is more plausible than the contrary.

No one disputes that music can help attract an audience, but can a close to all-music format do anything more than that?

In 1987, the Hezbollah abductors of American journalist Charles Glass were listening to Michael Jackson and Madonna during their depredations. Does Pattiz think that Brittney Spears and Eminem, both staples of Radio Sawa, can succeed where Madonna failed? We don't teach civics to American teenagers by asking them to listen to pop music, so why we should expect Arabs to learn about America or democracy this way defies reason.

Wars of ideas are won by ideas. In a war of ideas, performing a lobotomy on your enemy might be a good move. But bragging about the expensive lobotomy you performed on yourself is unheard of until now.

3087. CPB Liberal Bias Study Flawed, Critics Say

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 02:25:16 UTC

CPB Liberal Bias Study Flawed, Critics Say
Consultant's Report Under Investigation

By Paul Farhi
Washington Post Staff Writer
Friday, July 1, 2005; Page C01

A consultant who monitored news and talk programs on public radio and TV found that liberal and anti-administration views were widespread, but critics said the consultant's work was itself biased and riddled with errors.

The consultant, Frederick W. Mann, was secretly hired last year by Kenneth Y. Tomlinson, chairman of the Corporation for Public Broadcasting, the agency that disburses about $400 million in federal tax funds to public broadcasters. In recent months, Tomlinson has criticized National Public Radio and the Public Broadcasting Service for an allegedly liberal bias and has pushed PBS to add programs with a more conservative tone.

-- he Washington Post)

CPB hasn't released Mann's $14,000 study, which is the subject of an investigation by the CPB's inspector general as a possible abuse of taxpayer funds. It's still not clear what the purpose of the study was, although its conclusions comport with Tomlinson's view that liberal comments and ideas dominate news shows on public broadcasting.

Tomlinson, who was unavailable for comment yesterday, has never mentioned Mann's work in any of his public statements about public broadcasting. Mann, who reportedly lives in Indiana, remains something of a mystery; efforts by news organizations to reach him have been unsuccessful for weeks.

Mann's work was released yesterday by Sen. Byron Dorgan (D-N.D.), who had requested a copy from the CPB. It details the views of guests on four public radio and TV programs -- "Now With Bill Moyers" and "Tucker Carlson: Unfiltered" on PBS, "The Diane Rehm Show" and "The Tavis Smiley Show" on NPR -- that aired between October 2003 and June last year.

The report labels guests on these programs "liberal," "conservative" or "neutral," or categorizes them by such descriptions as "pro-Bush," "anti-Bush," "support administration," "oppose administration." It found "Now" (hosted by Moyers and in part by David Brancaccio) to be rife with liberal views; of 136 segments reviewed, it said 92 "clearly opposed" administration policy, while the balance were "neutral" or "not about policy." It also found that when "conservatives/Republicans" were guests, they "mostly opposed" the administration. Tomlinson has often cited the Moyers show in his public critiques.

Of 46 guests on Rehm's program, "liberal" viewpoints outnumbered "conservative" viewpoints by 22 to 5, according to Mann.

But Mann never explains his labeling criteria or indicates in any detail which specific comment or comments earned a guest a particular characterization.

Dorgan pointed out that "red-blooded" conservatives such as Sen. Chuck Hagel (R-Neb.) and former congressman Bob Barr (R-Ga.) were classified as "liberal" and "anti-administration" apparently for briefly expressing views that differed from administration policy. Dorgan called the report "kind of a nutty project" and an "amateurish attempt to prove a liberal bias," noting Mann had apparently faxed his findings to Tomlinson from Mary Ann's Hallmark, a card store in Indianapolis.

People in public broadcasting and some of those mentioned in the report expressed both indignation and confusion yesterday.

Rehm called Mann's findings "unprofessional and simplistic." She added, "I've been booking shows for 25 years. I don't think they have any idea what it takes to achieve the professionalism and expertise and the right people to express a variety of points of view. . . . What he's doing, I think, is trying to scare public broadcasters" into presenting a more one-sided and favorable view of the administration.

Tomlinson himself was a guest on Rehm's program on May 18. During that appearance, he said, "I'm a longtime admirer of you and this program."

Kevin Klose, president of NPR, said he found the report "impulsive" and asserted there was no evidence of systematic bias on NPR's news programming. "If there are questions and concerns about what we do, the first place to start is with a thoughtful, respectful and substantive discussion with [us]," Klose said. "We have yet to have that conversation."

Mann labeled as "liberals" three Washington Post reporters -- Dana Priest, Robin Wright and Walter Pincus -- who had appeared at various times on Rehm's show to discuss their news articles. Each said yesterday that he or she had reported aggressively on several administrations, both Democratic and Republican, and did not play favorites. "I stand on more than 30 years of reporting on U.S. foreign policy, in which I have traveled to 140 countries," said Wright. "I have criticized both Republicans and Democrats equally."

Said Priest, "My mission as a journalist is to hold this administration, like the Clinton administration, accountable for what it says it's doing, and I don't think that has a label."

Pincus likened the CPB report to the Nixon administration's efforts to pressure newspaper columnists. "I don' t think it's about labeling a political philosophy," he said. "What they were really doing is determining, 'Are you with us or are you against us?' "

The CPB issued a statement yesterday saying it could not comment on Mann's study while it is being investigated.

Subject: MOLLY IVINS REBUTTED
VOA is independent

I write with some concern about a recent column by Molly Ivins which I happened to see in the June 19 Salt Lake Tribune.
In the column Ms. Ivins addresses some of the controversies regarding Kenneth Tomlinson and his actions as chair of the Corporation for Public Broadcasting. She also correctly notes that Mr. Tomlinson chairs the Broadcasting Board of Governors, with duties she describes incorrectly as ï¿½oversees the Voice of America, Radio Free Europe and other official arms of the government's propaganda machine.ï¿½
The VOA is not a propaganda organ of any kind, and it is hurtful to see such a term applied. Far from it; the journalists who work at VOA (I am one of them) often risk their lives to bring more than 100 million listeners around the world the most objective, accurate and comprehensive coverage of global events. If she had consulted our congressional mandate and charter, or perhaps just tuned in or read online (http://www.voanews.com), she would have discovered yet more interesting stories about the VOA, and more accurate ones as well.

3093. Lobbyists' Role for Public TV Is Investigated

June 16, 2005
Lobbyists' Role for Public TV Is Investigated

By STEPHEN LABATON

WASHINGTON, June 15 - Investigators at the Corporation for Public Broadcasting are examining $15,000 in payments to two Republican lobbyists last year that were not disclosed to the corporation's board, people involved in the inquiry said on Wednesday.

One of the lobbyists was retained at the direction of the corporation's Republican chairman, Kenneth Y. Tomlinson, they said, and the other at the suggestion of his Republican predecessor, who remains on the board.

The investigators, in the corporation's inspector general's office, are also examining $14,170 in payments made under contracts - which Mr. Tomlinson took the unusual step of signing personally, also without the knowledge of board members - with a man in Indiana who provided him with reports about the political leanings of guests on the "Now" program when its host was Bill Moyers.

While the amounts of the contracts are relatively small, the issues they pose are part of a broader examination by the inspector general of Mr. Tomlinson's efforts to bring what he says is more political balance to public television and radio and what critics say is political interference in programming.

It comes as Republicans in Congress are threatening to cut support for public broadcasting sharply, and as a number of crucial staff members at the corporation have quit and privately cited concerns on Mr. Tomlinson's leadership.

The people who described the inquiry and the declining morale include officials unhappy with the corporation's course under Mr. Tomlinson. Concerned about retribution, they spoke on condition of anonymity.

Mr. Tomlinson, a former editor of Reader's Digest appointed to the board by President Bill Clinton in 2000, said on Wednesday that he would not comment on details of the investigation but was certain that he had done nothing improper.

"We are confident that the inspector general's report will conclude that all personnel arrangements were and continue to be made in accordance with the statutes and rules governing CPB's use of funds," he said in an e-mail message.

Corporation officials said the two lobbyists did not approach lawmakers but provided strategic advice on handling a bill last year that would have given public radio and television stations more representation on the corporation's board. The measure, which died, was opposed by the White House and Mr. Tomlinson but was supported by stations.

One of the lobbyists, Brian Darling, was paid $10,000 for his insights into Senator Conrad Burns, a Montana Republican who sponsored the provision. This year, he briefly served as a top aide to Senator Mel Martinez, Republican of Florida, but resigned after the disclosure that he had written a memorandum describing how to exploit politically the life-support case of Terri Schiavo.

Mr. Darling did not return a telephone call seeking comment.

The other lobbyist, Mark Buse, a former top aide to Senator John McCain, Republican of Arizona, said he provided advice on the legislative process over a month and did not talk to any lawmakers. Mr. Buse, who was paid $5,000, said he was hired at the suggestion of Katherine M. Anderson, a former chairwoman of the corporation and a current board member.

The corporation is financed entirely by taxpayer dollars and is supposed to be a political buffer between lawmakers and public television and radio. For years, it has told groups representing the stations that federal law prohibits it from retaining lobbyists to approach lawmakers or push for legislation.

Mr. Tomlinson has said in recent interviews that he has no desire to impose a political point of view on programming, and that his efforts are intended to help public broadcasting distinguish itself in a 500-channel universe and gain financial and political support. His critics, who include top officials at the Public Broadcasting Service and at National Public Radio, say his actions pose a threat to editorial independence.

The inspector general is looking at contracts signed by Mr. Tomlinson with a man named Fred Mann to monitor the political leanings of "Now." The inquiry was requested by two Democrats, Representatives John D. Dingell of Michigan and David R. Obey of Wisconsin, after they learned about the monitoring.

Officials said the inspector general was examining whether Mr. Tomlinson, as chairman of the corporation, had the authority to approve the contract or the payments.

Mr. Mann, who was listed in the contracts as living in Indianapolis, could not be located, and officials at the corporation said they knew nothing about him.

The inquiry comes as Mr. Tomlinson finds himself at the center of a political battle that threatens to reduce the corporation's budget significantly, and internal turmoil that has sharply eroded morale and recently prompted significant staff defections. The corporation's general counsel, Donna Gregg, left the corporation this month. Last week, Nancy R. Rohrbach, the senior vice president for corporate and public affairs, submitted her resignation.

Ms. Rohrbach has told friends that Mr. Tomlinson repeatedly ignored her advice. She and other officials were described as being upset last week when Mr. Tomlinson rejected a proposed statement by senior officials at the corporation denouncing a vote by a House appropriations subcommittee that would slash the corporation's budget by 25 percent, or $100 million, to $300 million.

The House Appropriations Committee is expected to approve that measure on Thursday.

Officials said that after the panel's vote last Thursday, staff members confronted Mr. Tomlinson about his refusal to approve a statement condemning

the Congressional action.

While public television and radio groups denounced the subcommittee vote and called the corporation to seek a similar statement, late in the day Mr. Tomlinson issued a milder response, saying that the corporation was "concerned" and would "be joining with our colleagues in the public broadcasting community to make the case for a higher level of funding as the appropriations measure makes its way through Congress."

The corporation's Democratic and independent members, meanwhile, are preparing to urge the Republican-controlled board to delay the appointment of a new president of the corporation at its regularly scheduled meeting next week. The former president, Kathleen Cox, left in April after her contract was not renewed.

Mr. Tomlinson has said that his top choice is Patricia Harrison, an assistant secretary of state and a former co-chairwoman of the Republican National Committee.

Freebanders should stay the hell out of the 10 meter band, unless they have
the ticket to transmit there.

What's the big attraction, anyway?

SWLer:

Shhhhh!

Sure the USA has had to setup a bit of a disinformation program. You can't blame us, the russians did that to us for years, now it is our turn.

Don't believe anything you hear unless our news medias tell you it is true. It is unamerican to expect your government to explain it's actions, we are empowered by liberals, lesbian, loonies and humanism, we don't have to answer to anyone but our peers (fellow government bureaucrats here.)

Don't let your president down here, close your ears to the other countries disinformation programs, our disinformation is the true disinformation.

I know you will do the right thing.

Your president,
G.W.B.

Hey W, is it true that Laura sneaks down to the basement to
operate Freeband with her linear and TS-2000? Those hams
had better watch out when Laura comes freebanding on 10m.

Steveo:

Now, now son, there is one hell-of-a-lot more freebanders and cbers
than hams.

Think about it like this, company is coming and you are going to have
to give up your room for a bit.

Do what is right for the country son, standing their sniveling in your
pink skirt you just look foolish, get a hold on yourself son, take it
like a man!

Here in america, son, people are empowered by their creator. We the
government have no right taking away the radio bandwidth which their
creator bestowed upon them.

I am afraid you are just going to have to learn to play well with the
other children and get along. Perhaps a freeband tech will help you
set up a station and get on the freebands and learn the ropes.

Do what is right for your country son. Your president is counting on
you to be a team player now, remember that.

You miss Burr, Don't you mike? Here, let me play a little song for ya. Hit
it soft drummer!

1 ,2, 3

There's a place where lovers go to cry their troubles away and they call it
lonesome town, where the broken hearts stay. You can buy a dream or two to
last you all through the years and the only price you'll pay is a heart full
of tears.....

Ah. That's a sad one. Tissues for everyone bartender!

LOL!!!!!!!

B.H.

Laura, bless her little heart, has a bad addiction to freebanding.
Jenna gets together in that whitehouse basement with that 50KW collins
linear and I don't see them for days. Like mother, like daughter I am
afraid.

Almost scarred the secret service to death with the stealth antenna
they were using (the whitehouse flagpole) melted and caught fire when
it shorted and heated up the coils with the 50KW. Just thank goodness
it is not against the law to burn a flag, yet. No one would like to
see their presidents first lady in prison (however, I do have a second
and third in the oval office, just in case :)

But hey, everyone has to have a hobby.

Ronald Reagan drew snickers from Americans when he described the Soviet
Union as an evil empire. Russians, however, were overjoyed that the US
President was finally telling the truth. Most Russians could not get
MTV. However, VOA-the old version-was widely listened to.
>
> Is transforming the war of ideas into the "battle of the bands" a winning

> of unfavorable views of the U.S. is more plausible than the contrary.

I think that Pattiz must be the commercial radio mogul mentioned in
Passport 2005 who has taken over VOA and who is concerned more about
audience share than about information or even presenting the USA's
views.
>
> No one disputes that music can help attract an audience, but can a close to
> all-music format do anything more than that?

All the VOA suits are concerned about is audience share. It's the same
philosophy as the idea in the late 90s that "eyeballings" of a web site
was more important than profits or business model viability. The
dot.coms eventually failed, but the evidence of the failure of
Sawa/Farda may not come until it is too late.
>
> In 1987, the Hezbollah abductors of American journalist Charles Glass were

> succeed where Madonna failed? We don't teach civics to American teenagers by
> asking them to listen to pop music, so why we should expect Arabs to learn
> about America or democracy this way defies reason.

But to Pattiz all that's important is audience share. It's the same
concept that has five stations at a time in one city playing the same
turgid format that is currently hot among the marketing wunderkinds in
pursuit of the top slot on the Arbitron ratings. But success in
shortwave radio has nothing to do with ratings, something the VOA, BBC,
and DW seem to have forgotten. It's really the same concept that drove
invading Iraq-make Big Things happen, get the people there, and the rest
will take care of itself. But the devil really is in the details, and
details rarely take care of themselves.

>
>
> Wars of ideas are won by ideas. In a war of ideas, performing a lobotomy on
> your enemy might be a good move. But bragging about the expensive lobotomy you
> performed on yourself is unheard of until now.

The US has a government of stupid people, elected by a stupid populace.
The president can barely speak English, which is his native language. He
can't seem to think, and neither can the rest of those bozos. But the
people who put them into office can't think either, thanks to the
gutting of public education. Now Norquist wants to shut the schools down
completely, and control the media completely, so that the people will
only be capable of thinking preapproved thoughts. As long as the people
are forced to let the elite do all their thinking for them, the elite
can do as they please.

3110. Re: Enjoying my retirement (nrc)

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 03:31:15 UTC
From: Burr <pitz2@verizon.net>
Message-ID: <7m1ze.1631$VN3.745@trnddc01>
Source record: 26597

Oh Mike,
You don't rest do you?

I haven't gone anyplace yet but hope to soon!!!!

Just think, when you grow up and learn to vote you to can vote three times.

OH Mike, I didn't know you missed so much???

You know Bust is a very smart man, here is a little story from the onion about him.

Enjoy my friend!!

WASHINGTON, DC-President Bush delighted an intimate gathering of White House dinner guests Monday, regaling the coterie of dignitaries, artists, and friends with a spirited, off-the-cuff discussion of the Roman poet Virgil's lesser-known works.

"Ah, W. was in top form tonight," Spanish foreign minister Josep Pique Camps said. "We were all held captive by his erudition and charm. First, a brief history of the opium trade, then a bit of Brahms on the piano, then a rousing discussion of Virgil. That boy is a wonder, isn't he?"

According to guests, the subject of Virgil arose serendipitously, when a servant opened a window in the Red Room, to which the group had retired for after-dinner drinks. Noticing the breeze, Bush raised his glass and delivered a toast to the changing of the seasons. He then apologized to "lovely Winter," explaining that he "meant no slight against her."

"The first blush of Spring always reminds me of Virgil's words," Bush said. "In early spring-tide, when the icy drip / Melts from the mountains hoar, and Zephyr's breath / Unbinds the crumbling clod, even then 'tis time / Press deep your plough behind the groaning ox / And teach the furrow-burnished share to shine."

"Book One of The Georgics, of course," Bush added.

Bush arranged the small, informal dinner in honor of Camps' unexpected arrival in America.

"It had been too long since I'd heard one of W.'s anecdotes, so I simply got on a plane," Camps said. "I showed up at his doorstep with a watercolor by Ignat Bednarik, whom I know he adores, just to make sure he'd let me in."

Bush confessed that he has "long held a fascination with the classical world," noting that his love of Roman history influenced his decision to

enter politics.

"Virgil was born in the year 70 B.C.-let's see, that would be during the consulship of Gnaeus Pompeius The Great and Marcus Licinius Crassus, if I'm not mistaken," Bush said. "It is said that while Virgil's mother was with child, she dreamt she gave birth to a laurel branch, which, upon touching the ground, sprang up into a full-grown tree, its branches laden with ripe fruits and flowers. The next morning, she gave birth to Virgil. The legend goes that Virgil was born without crying, so mild was his countenance."

According to White House regulars, it is not uncommon for Bush to engage guests in discussions of whatever subject strikes his fancy, from the symphony playing in the background to the history of a style of jewelry a guest happens to be wearing.

"I love to hear George hold court on this or that," said Bush family friend and world-renowned physicist Norberta M&#65533;nter. "I tell him he is such a spoiled brat, the way he demands our attention, but I must confess I can't take my eyes off him when he does."

As the group sipped apple martinis and, in Bush's words, "recovered" from the Chilean sea bass, the president continued.

"Most primarily associate Publius Vergilius Maro with The Aeneid," Bush told guests. "Yet so much pleasure is to be found in his lesser-known works-The Eclogues, completed in 37 B.C., and The Georgics, in 30 B.C., both of which praise the idyllic rural life."

"You have to remember I'm a bit of a farm boy myself," chuckled Bush, referring to his 1,600-acre ranch in Crawford, TX.

"The Bucolics are my personal favorite," Bush said. "They were basically a thank-you to Asinius Pollio for preventing the seizure of Virgil's land by the Triumvirate when they ordered the lands on the far banks of the river Po distributed to veterans of the victory at Philippi. They are so sublime, so inspirational. But why should I speak, when Virgil can do so himself? And far more eloquently, I might add."

Bush then recited a selection from The Bucolics in the original Latin, pausing occasionally to translate into French out of respect for his friend Am&#65533;lie du Maurier, a young Parisian concert violinist in attendance. Earlier in the evening, a blushing du Maurier admitted to Bush that she did not know Latin. Bush eased the young woman's embarrassment with a joke.

"I wouldn't be surprised if your father forbade you from learning Latin, out of sheer distaste for res publica," said Bush, alluding to du Maurier's ancestors' place in the ousted French aristocracy.

Despite urging from dinner guests to continue his Bucolics recitation, Bush declined.

"I have already taken up far too much of your valuable time with my classical nattering," Bush said. "I dearly wish I could give you back this

hour during which you so graciously indulged my dilettantism, but, as Plautus said, 'Factum est illud, fieri infectum non potest.' Done is done, it cannot be made undone."

3111. In search of BBCWS "Bow Bells" interval signal in MP3 (44.1 khz, 16 bits, mono or stereo) -- possibly from Carillon recordings...

In search of BBCWS "Bow Bells" interval signal in MP3 (44.1 khz, 16 bits, mono or stereo) -- possibly from Carillon recordings...

I need to add the MP3 as embedded audio on one of my webpages.
MP3 file sizes under 512kb preferred, 128kbs MP3 data reduction (non-VBR preferable).
Would consider AAC also, except for lack of browser player support.

ok assbite. You crossed the line!!!

I just sent my net logs to my isp and had a rep on the phone.

Buddy, you just screwed up BIG TIME! This is my corporation's net, do
you even understand the implications of that? ROFLOL

Start hoping you proxyed though a bunch of isp's in third world
countries. Spoofing is one thing, using my corporations network
WITHOUT it's permission is a whole 'nother ballgame friend. That IS a
computer crime!

And, let'us hope you didn't do it across state lines huh? You really
don't need a felony on your record, do you? <grin>

Oh, and by the way, I just happened to find a little email bomb. Now
I wonder who put that there? And, where a net-trace on that mail will
end up. Oh well, maybe my people can help with that, huh? SEE YA!

Warmest regards,
John

Every ham I know in the area is either inactive, retired, or
disabled. The others moved out of the state when the Microdyne plant was
moved to Pennsylvania.

On the other hand, If I had charged them for repairs to their radios
over the last couple years that I was able to work I would have the
money to pay for a new roof.

It will happen, I just have to be patient. In the mean time I will
try to work in the 10' X 10' office in the back corner. I managed to
put the undamaged parts and tools in there. Now, if I can just arrange
it enough to set up a workbench.

One thing I learned in the electronic repair business was to never
take a check from a ham, cash only. Hams will always stiff you, but
I never met a freebander whose check did not clear. A Frebander's
check is always good.

I got some bad checks from CBers when I did 2-way radio and
commercail sound systems about 20 years ago in Ohio. I got even with
one jerk. He would put just enough in his checking account to pay his
rent and utilities so I waited till the first of the month to resubmit
the check. It cleared, and his rent check bounced. Boy, was he pissed!
;-)

After that, it was cash only, unless it was a commercial account.
Most of my customers were schools, churches and factories who didn't pay
in cash, but wouldn't write a bad check because you could file papers to
seize assets to cover a check and they weren't returned till the payment
was made.

>

I know what you mean. I made the circuit (with just one LC) at a power supply course during 2nd semester at my newly passed electronics engineering class. My teachers were highly spectical and failed to grasp the idea behind it, but they had to give me an A for that one, seeing how well it actually worked. No need telling them were the idea came from - haha.

Maybe I should improve this design; in many applications you just need a pure voltage, not necessarily a regulated voltage. Maybe I'll use it for some of my radios.

3123. Chiming bell on 5744 kHz...

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 08:58:11 UTC
From: Mark <NoSpam@all.thanks>
Message-ID: <1120726599.482295@ftpsrv1>
Source record: 26512

Hi...

Right now, at 08:46 July 7 2005 UTC, I hear a "bell" chiming on 5744 kHz,

USB.

There are about seven "chimes" every five seconds or so. The pitch of the

chime is a 'G' below middle 'C'. There's a reasonable amount of fade on this

signal, and its not very strong here in Auckland.

A WUN search reveals nothing significant.

Any ideas?

Mark.

Auckland

New Zealand.

At least 6 explosions on the subway & one double-decker bus, now CNN says a number of (3) explosions on buses. Unofficial reports of unexploded bombs found, but haven't seen verification yet. Lots of confusion still, even from "official" sources. Are noe admitting possible terror attack, instead of power surges as claimed in first reports. All underground/subway trains shut down, as well as busses in "Zone 1" (some reports now say city wide). Cell phone network has been shut down (can be used for remote detonation). Live news feeds cutting off (overload of communication network due to panic?). Land lines also overloaded having problems. Buckingham Palace sealed off, police on streets with weapons and rooftops with biniculars. At least 2 confirmed dead, 90+ casualties. Anyone getting reliable up to date info on SW or net please advise.

I pointed out one anomaly on the list and it has been corrected, along with a couple of other updates. The revised version has now been posted.

I have a feeling this is NOT an Arab based terrorist attack even though they claimed they did it. I think this is a Euro anti-gov group protesting the destruction of the planet's environment and big corporate energy entities. The fact that this coincides with the G8 tells you a lot.

Hope you guys in the U.K. are OK.
Good luck mates.

Lucky

1) While I was able to listen to BBC Radio 4 (the talk station) on line with my saved Real Audio .ram file, the normal way to listen is via a pop up window on their website and I was unable to connect to their web site.

So for most people, BBC radio on line was NOT reachable.

Here is the pointer for realaudio:

rtsp://rmlivev8.bbc.net.uk/farm/*/ev7/live24/radio4/live/r4_dsat_g2.ra

2) I notice that BBC America, a cable/satellite TV network, seemed to be running their normal schedule with news at 1000 GMT (6 A.M. EDT) followed by "Talking Movies" at 1030 GMT and then two more alternations of news and movies.

Perhaps they should have been more flexible and just stuck with the news? On the other hand, maybe at this point there isn't that much news to report.

Source record: 26523

Zenith Trans-Oceanic Royal "3000"

I'm looking for replacement bulbs for the band scale illumination on the above listed shortwave receiver. The bulb is an older screw-in type that is powered by a single "D"-Cell battery. I've looked high and low for a single-cell (1.5V) bulb, but have come up empty handed. The only thing I have found in the 1.5V category is the "spot" style bulb, which would be useless in this application.

Anybody else have one of these units that has found replacement bulbs? Perhaps you made a slight modification to the unit and somehow arranged something using LEDs? Any advice or thoughts on the matter would be greatly appreciated.

Details: The bulbs looks like the one pictured here:
http://www.topbulb.com/images/bulbs/50.jpg
According to the sight is a "G"-type bulb, although another sight identified it as an "E"-type? Bulb is 1.5V (or thereabouts), and has "123" printed on the side, and "*** USA ***" is stamped into the side of the bulb base.

Thanks!

I (and I'm sure others) have found time and time again that webfeeds of various broadcasters fail, when listening counts most --- during a national emergency. Being able to quickly scale up to handle a large number of listeners is very important. Of course, shortwave doesn't have such fan-out issues...

I tried both the BBC website and the URL you listed to no avail.

Near the end of the previous message I stated, "I predict that Great Britain will NOT join the EU, because that would probably require that they relinquish their headship of the country."

That should have read, "I predict that Great Britain will not ratify the EU Constitution...."

You may wish to do a Google search for ["EU Constitution" & Britain] - without the brackets - which should produce hundreds of thousands of hits.

3141. TAXES in the LAND of the FREE

Newsgroup: rec.radio.shortwave
Date: 2005-07-07 14:42:12 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <11cqfq98pobb87@corp.supernews.com>
Source record: 26530

This is a cut and paste, at least after we pass the double line - not mine, but interesting:

How long before we get a short wave listening tax? :-)

Oh, This morning's Daily Dispatch (Henderson, NC) has a front page article, "Water costs could skyrocket" - http://www.hendersondispatch.com/articles/2005/07/07/news/news02.txt - or http://tinyurl.com/cwfop - which might be of interest. The Corps of Engineers wants to charge a "storage fee" for water in the lake, built with taxpayer money, that is over 10 times the previous contract with the city.

It brings to mind a scripture reference: Re 13:16, " And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads:"

Some have said the new world order will use WATER and FOOD to starve the world into submission to their plans. .... Not unlike the other communist governments have done over the years - creating a holocaust far greater than ever happened in Israel.

We're living in VERY INTERESTING times. Watch the news. Read the Word!

:-)

This doesn't directly answer your question, but for my 3000-1, I
pulled a white LED out of my stray parts box and soldered it into
the base of the burned out bulb. I put a thin white paper cover
around the element to disperse bright but narrow beam thoughout
scale tube. Screwed the new piece into the socket and it's brighter
and whiter than the original, with no heat, and lower draw. And
with 100,000 hour life of the LED, there will be no replacement
necessary in my lifetime.

Obviously, this is not the best option for meticulous
restorations, but for daily users, it's a practical improvement.

fascinating. its rather funny. you don't have to be a ham to bounce checks (seen plenty of them from the likes of: little old ladies, young couples, professionals and even freebanders and regular cb'ers AND hams. doesn't matter which group you are in, a check bouncer comes in any form.

perhaps you should reconsider your overgeneralization?

You could try some of the frequencies that we don't get here very well.
12095 kHz perhaps, or some of the african or european targeted ones.
(But the Beeb also chopped their European shortwave schedule). For both
Europe and the Americas, the big broadcasters have decided that the
shortwave audience isn't worth covering in the same areas that they are
providing satellite TV and audio transmissions.

Start with the BBC web site and you can find the transmitter schedules
for each region. They're in two forms, a text web page, and a graphic
bar chart showing the transmitter times for each frequency, and a location
of the transmitter.

>Mark, is west coast SWL difficult anyway? That's what I've heard.

Not difficult, but not convenient. At Noon here, it's 2-6 AM for the
other side of the Pacific, so they just don't bother transmiting. Stuff
starts to come on in the late afternoon when it's breakfast time there.
And the evening news comes on at 4 AM here. (I do a lot of my radio
listening on a tape recorder). As you're two or three hours ahead,
you may find it more convenient, if the signals get there.

Hold it right there - somebody go get Mr. Davies.

Sounds like we finally have a real live kazaharharhar here.

Hey Bro. Lawrence - let's ask him if he really rules the world ! ! !

I bet he does.

And I bet he owns all the banks, too.

I wonder if he controls WWCR behind the scenes.

Lw,

I wouldn't bet on Mongolloyd Davies owning the clothes he is
wearing....., much less any business.

I tried to reply to your request for spare SP-600 parts, your aol
mailbox was closed.

No parts anymore. I see you might have one headed your way, SP-600 that
is.

I listened to it...it is kind of weird. I know a lot of times USB signals with Spanish speakers at night are Mexican or Carribean fishermen or workers, so maybe that is what this is. Maybe speaking in code to have fun, or some odd form of communication? I doubt it's anything more insidious than that.

Was this the Weill-Brecht song from the Three Penny Opera in which the maid at an el cheapo hotel dreams about how the town is going to be taken over by pirates and she is going to be in charge and give the order to kill everybody?

http://www.boscarol.com/nina/html/where/piratejenny.html

Version of the lyrics in English

Or does it have to do with the musical group whose web site is

http://www.piratejenny.ca

which is, presumably, named after the Weill-Brecht song?

http://cbc.svserver.com/ -- new broadcasting website

[Text selections follow]

Power Broadcasting, a multi-denominal religious broadcaster, needs your assistance in the construction of a shortwave broadcasting station in Papua New Guinea (PNG).

Our broadcasting station will be capable of reaching 2.5 billion (*) potential listeners when completed. Listeners in Indonesia, Burma, Pakistan, Afghanistan will be able to hear the word.

-=-=-=-=-

Indonesia and South East Asia, post 911

Indonesia has become a paradise for extremist organizations.
Australians, New Zealanders & US nationals have been killed in recent terrorist attacks in Bali Indonesia.
More may be killed in future attacks.

There are future attacks against Europe and the US being planned in Indonesia.
Extremists in will be pursuing terrorist actions for decades to come in Indonesia.
These extremist organizations threaten global democracy, justice and the rule of law -- and will use any possible advantage given to them.
What can I do about it?

There are ways to lessen the influence of these dangerous militants. As the current situation stands, the Indonesian populous has almost no moral willpower to resist these foreign militants.

However, we [nor anyone in the Indonesian populous] can't just confront these militants without adverse negative political and security repercussions. All of these problems can be sidestepped by moral religious broadcasting.

International radio broadcasting is one of the few ways that allow the local populous to be helped, without directing their loyalty to the militants or upsetting local government structures.
Indonesians depend on international shortwave broadcasting : Indonesia consists of hundreds of scattered islands without substantial telecommunications infrastructure. Reliable telephone service only exists in about 20 large cities, but not in the 30,000 small villages where most of the population lives.

Poor telecommunications helps shortwave broadcasters by providing many listeners in need of news from nearby islands and nations listening to news via shortwave.

As of this time there are no broadcasters in the region that are capable of helping the local inhabitants to morally resist the persuasive power of the foreign militants.

Einstein used to say, "God may be sophisticated, but He's not plain mean." What Einstein meant was that if you're playing against nature and trying to discover a new principle of physics -- it may be a tough problem, but there's nobody trying to outwit you. In war and terrorism there is always someone who is not only trying to make it harder, but is trying to kill you.

-- R. James Woolsey, Strategic Analyst

-=-=-=-=-==-

What are the costs for not helping?

The Indonesian people (and other Islamic peoples in Southeast Asia) must be persuaded to move their loyalties from the extremists to those of western pluralism.

The Indian Ocean tsunami relief effort may have provided temporary goodwill. This goodwill cannot last, and the extremists know this. They will be preparing to attack, and will succeed unless we can stop them by any means possible.

Without using the tools of moral persuasion -- the following incidents may become reality.

!!!! More Text !!!!

-=-=-=-=-=

Advantages of the ALLISS transmission technology not shown here: other parts of the world can be targeted at will.

Very few religious broadcasters target Pacific Islands nations individually, but this precise targeting is possible with ALLISS technology.

The Russian Far East can be reached easily from PNG.

-=-=-=-=-=

I'm not familiar with the 3000. But, if you need to disperse the light from an LED you can "frost" the plastic lens by lightly scuffing it with a piece of fine sandpaper.

New Latin-Focused TV Channel Backed by Venezuela

Venezuelan President Hugo Chavez has given strong financial backing to the project, saying it is an important step in giving South America a voice independent[?] of traditional media conglomerates. Chavez's propaganda minister, Andres Izarra, is the station's president.
...
Telesur director Aram Aharonian strongly denied accusations by Venezuelan government critics that the channel would carry left-wing "propaganda."
...
The station has its headquarters in Caracas, in a building adjacent to Venezuelan state television, and is setting up bureaus in Argentina, Brazil, Uruguay, Bolivia, Mexico, Colombia, Cuba and Washington.
...
http://www.newsmax.com/archives/articles/2005/5/24/222420.shtml

---

Instead of moving over, Al Jazeera may be moving in, with Telesur that is.

As Telesur gets set to launch, the Arab-language news program Al Jazeera, which is funded by oil-rich Qatar, is expanding into Latin America, opening a bureau in Caracas and possibly creating logistical ties with Telesur.

An article posted on a Venezuelan government web site http://www.minci.gov.ve/noticiasnuev.asp?numn=6256 refers to Al Jazeera's expansion into South America as "being framed within the Telesur-Al Jazeera project."

A spokesperson for Al Jazeera said he could not confirm that the two networks have signed any deals between them but said it is possible that the two state-funded enterprises could be cooperating logistically. Kozloff says it is his understanding that Telesur has entered a deal to extend office space to Al Jazeera in Telesur's headquarters.

Which works well in most cases. Not so well in this case, because
of the narrow angle of the emitted beam and the fact that the LED
is at right angles to and behind the surface to be illuminated. Even
after frosting, most of the emission is still wasted on the left
inside of the radio.

Now, for an LED that radiates head on, like a pilot, or in the
case of my Marantz 2218 stereo beacon, yeah, buffing the LED with
light sandpaper or steel wool does a nice job.

3167. Euthanasia

Newsgroup: rec.radio.shortwave

Dear Whatever

A Good Idea might be to do what this poster did on Raduio NEWS Foum

Hi all radio Junkies. I think one of you may be able to help me. I am
looking for contact details of NSW / National radio producers. Does
anybody have a contact sheet they could share with me? Many thanks and
happy radio listening.
Name : Angela

I cant give you my list

Just ring the stations and ask their names

In the mean time Id love to see if you get a reaction on the Aussieseek
Political Messageboards.

You enter via the Home Page at

http://www.aussieseek.com

I lost about 100.,000 visitors this month down from 400,000 where its
been stuck for the last 4 Years to 300,000
So your Item might help my depression.

Messageboards are just like Talkback Programs

2 of the regulars are Talkback Producers

Your Topic is finite

I had to allow the Hospital to turn off my mothers life support system

So Euthanasia exists

Hope this helps

Keith

Never buy a HP or Compaq as you will not get any tech support. When I had to
restore my system I found one of the disk in the restore set was bad. Never
able to receive help needed to fix problem and HP didn't have the correct
replacement CD. Ended up scraping system although it was only over a year
old. NEVER BUY HP PRODUCTS.

British Medical Journal 09 July 2005 MInerva column

Minerva -- 331 (7508): 118 -- BMJ (p2 of
5)

Minerva is unsurprised by the findings of an inquiry into the^ effects of music on preoperative sedation and the hypnotic effects^ of anaesthetics (Anesthesia and Analgesia 2005;101: 103-6[25][Abstract/Free Full Text]).^ It reports that listening to music during premedication with^ midazolam is associated with increased sedation level and lower^ bispectral index values (indicating greater hypnotic effects)^ in the preoperative period. Participants were invited to bring^ in their favourite selection of music, and the psychological^ basis for the observed effects may include issues of control^ and distraction during an otherwise stressful time.^

A historical foray into the benefits of music is found in the^ American Journal of Public Health (2005;95: 1106-9)[26][Abstract/Free Full Text]. The positive^ link between music and happier workplaces has long been recognised.^ Music has been shown to increase efficiency, lift spirits, and^ even bind otherwise disparate groups of people together. The^ now defunct BBC radio programme Music While You Work may well^ have contributed to a reduction in the number of accidents at^ work. It was scheduled at mid-morning and mid-afternoon, the^ times when lapses of concentration were most likely to happen.^

Back in the 1950's,there was a family that lived next door to me and the guy owned a Zenith Transoceanic radio,it was one of the original old Zenith Transoceanic radios.He kept that radio stored in a room in his garage where they used to have their clothes washing machine and some other stuff.I was only about nine years old back then and I never did pay too much attention to that radio.Honestly,I was more interested in his daughter.I am not lieing either,it is the truth.

There were no references to the Three Penny Opera other than P.J.'s name. I tuned-in in the middle of the piece, there was a woman describing her collection of 20 or so old radios and some of their qualities, and this drifted into her thoughts on the nature of radio and the way it affects the listeners. This morphed into what sounded like a late night pirate broadcast. There were a lot of different sound clips nicely put together. Kind of like KIPM meets Negativeland. When I went to the RCI website I caught the last 5 minutes of it again on the" listen live" section but then it was gone. The www.piratejenny.ca website looked like the most likely source after a couple of Googles. I sent an inquiry and a "hats off", but haven't heard back.

There's a report in this thread that the phone system was shut down,
since cell phones are used as detonator timers. If the internet lines
were shut down, that would explain why BBC online was unreachable. Maybe
after having four bombs go off in central London near Bush House, BBC
management will start beefing up shortwave BBCWS and other over the air
BBC services? I hope they're getting a firsthand lesson on how
unreliable their much vaunted internet technology is when it's needed
most. It's hard to believe that the original purpose of the internet was
to create a communication network capable of surviving a nuclear war. A
few guys with bombs can overload it. Imagine what blowing up the
buildings housing the root servers could do.

Cell phones systems can be "shutdown" independant of landline phone systems
if that is so desired.

> If the internet lines
> were shut down, that would explain why BBC online was unreachable.

It is more likely that they were simply overwhelmed.

The TCP/IP network is the most robust communications network in wide use
today.
It was designed to be able to automatically route traffic around "damaged"
fabric. If
servers need to be "bomb proof" they are mirrored and located at
geographically
diverse locations so that if one server takes a hit the other(s) will
survive. That is the
idea. Whether or not the now "public" non-military internet practices such
mission
critical diversity is another matter.

Apologies if anyone was offended by my quoting the above musings from another NG. No bad intent was meant or implied as it is an example of x-treme sarcasm which I recognized and read which others obviously do not. (just try and not take things so seriously just like that which is spoken on shortwave on a daily basis) ;)

In retrospect this is rather interesting:

"08:46 UTC"? What time did the London bombings begin?

"about seven 'chimes' every five seconds" Seven/Seven = Date 7th July?

Hmmm, I wonder if the frequency "5744" can be made to fit this coincidence?

Has anyone received their new password from ILGRado lately? I re-applied for mine last week, but haven't heard from them. The one I had from last year has expired. I like ILGRadio because it works so well with my ERGO 4 control program. If I can't get ILGRadio anymore, what other free databases are available for download?

Hey, I was just throwing out a theory. Your idea is better though, the
always ubiquitous gremlin of "net congestion". Net congestion happens
all the time on normal days. Of course, if your connection suffers from
net congestion, your feed will abruptly cut off for "buffering" and/or
it will gradually degrade until it starts sounding like BBs rattling
around in a soup can. In the worst case scenario, the feed will simply
shut down and refuse to function completely. Over the air radio doesn't
have these problems, of course.

A very big if. BBC suits have shown absolutely no glimmer of sense.
Neither has the VOA, which is run by a guy who thinks that Eminem can
win the war on terror. The utter failure of Sawa/Farda in preventing
terror attacks should be enough reason to can Pattiz.

Your robust communications network may work fine overall, but if too
many people try jamming on to one site that area quickly goes down. The
network is only as robust as the servers which comprise it, and those
servers keep going down in times of greatest need. Radio Australia's
webfeed went down after the tsunami hit, and RA was playing cricket
matches as the horror unfolded.

Roger that. I finally gave up on my HP S20 Photosmart scanner after sending it in for out of warranty repair (to take care of any hardware problem) and have it sent back with note that there isn't anything wrong with it. I also paid for and went through their tech support line with no success. I finally tossed it and bought a much nicer Epson Perfection 4870 that does double duty as a document scanner. My other HP flatbed scanner is gathering dust on a shelf. HP? Never again!

It may not neccessarilly have been net congestion, although it likely
contributed.
The server may have simply run out of available "sockets" from so many
requests. In which
case you won't be able to make any connection. It is somewhat akin to
repeatedly
dialing a call-in telephone number where there are only 10 lines available
and 1000
persons are calling. Everyone can get a dialtone to dial the number but
the other end doesn't have enough incoming lines - busy signal.

See my "sockets" explaination above. It would require one hell of a lot of users attempting a simple "connect" to jam up the internet. The bandwidth required
for a single users' browser to request a simple connect is smaller than miniscule.
Consider NASA's web site on July 4th with 1 billion requests - a record! Server survived and
people were served. Plenty of internet bandwidth and robustness. What is important
is the servers' capability and its subscribed bandwidth to its internet provider. Once the
"packets" reach the internet backbone its whooooooosh - light speed baby!

> I'm no musician. What note does "Big Ben" in London play?
>

Mr. Panopticon,

For an explanation of the pitch of the note played by "Big Ben", please see
http://www.hibberts.co.uk/strike.htm

For your convenience, an extract of the pertinent information follows:

"Big Ben has a nominal [pitch] of about 335Hz (it is doubletted) which in
musical notation is E + 27 cents. Actually, the dominant note we hear with
this bell is a secondary strike of about 440Hz, i.e. an A, based on a
partial above the octave nominal with a frequency of 883Hz"

I'm listening on 5744 kHz again this evening (local). I had hoped to hear the chiming bells again and record them this time.

No luck. No chiming bells.

However, the frequency has been active with phone patch traffic this evening (local). I've seen mention of phone patch traffic on this frequency, in a WUN archive search. But the archive mentioned only Russian phone patches. This was either Australian or New Zealand accents.

Specifically, at 11:11 July 8 UTC, 5744 USB, I heard a telephone ringing sound. I could hear one side of the conversation but the other station was just barely audible. And the one I could hear was very weak.

There was male speaking. He took two phone calls within ten minutes. He seemed to be experiencing propagation problems too: "Yeah, receiving, over." "Could you repeat that?, over"

I believe he said, at one point "Great to hear you're enjoying the yabbies!". (A yabby is a fresh-water shell fish, much like a miniature lobster, I suppose. Quite a delicacy.) This is what makes me think the stations are in Australia, with such talk of "yabbies".

I then heard a series of five tones, all the same pitch. Then a short series of multi-tones. The phone line is quite at the moment (11:31 July 8 UTC).

Has anybody else ever managed to tap this phone line?

Mark.

Yes, a few $$$ for fast, reliable service and frequent updates would be ok.
I'd bet my few $$$ service would be the same though.

I can see it now...

"Dear R.R.S... I paid my few $$$ for an ILG password, but it's been 2 weeks
and I haven't heard from them. Anyone else get theirs?"

Of course I'm saying this after getting my post 1/1/05 password, so I'm not
in the bind others are.

I remember 'Music While You Work'. It started during WW II and continued
for some years afterwards. I started work as an Engineering Apprentice
in 1949

The sound of a whole factory singing along to the music was amazing!

It was certainly looked forward to, to break up a noisy shift.

If you got a HRO-500 for $25 you got a steal. They typicly sell for over
$500 in good shape and upwards of a $1000 in excellent condition.

Yes, I think it was a pretty good deal <vbg>. Powered right up. Kind of fiddly to use and the 4 filters were a bit sloppy by todays standards, but it was fun to play with for a while. That HRO knob was pure pleasure to spin - sort of like a combination lock on a bank vault.

I got it at an estate auction for $25.00 and someone else got a Kenwood TS830 for $45.00. The radios were not advertised so all the antique people showed up but no hams.

Hi

I think I saw 3amp fuses at Rat Shack a couple weeks ago. Go to an
electronics store in your area or order them over the net.

There was a growing pacifist movement afoot.

3230. Re: Kenwood R-1000 vs Yaesu FRG-100

Newsgroup: rec.radio.shortwave
Date: 2005-07-08 16:40:39 UTC
From: Ron <ron@nowisconsin.com>
Message-ID: <049tc1505duf4ot5jgvdj7efb4ae9d454g@4ax.com>
Source record: 26919

Interesting thread..
A virtual trip down memory lane for me. I had the FRG 7, FRG 7700, Kenwood R-1000 and now the FRG 100B.

Hands down the FRG 100 has been the best by far. Ease of operation, rock stable and frequency accurate.
Audio for me has not been objectionable though I use headphone most of the time and a nice communications external speaker other wise.

There are many user selectable settings and functions that make the FRG 100 a snap to use....but you REALLY DO NEED TO READ THE MANUAL to put those functions to task.

For me the FRG 7 was not even as good as my portable Panasonic RF-2800. The selectivity was poor on both FRG 7's I owned. Sensitivity was OK but stability was another propblem.

The R-1000 I had would drift a little until it had warmed up for about 1/2 an hour. Only a slight problem if you were listening to SSB or exhaulted carrier transmissions. After 30 minutes though it was fine and drifted only 10 to 20 cycles per hour . Quite usable for copying an AM signal on SSB mode.
The only other thing I encountered with the R-1000 was a bit of muliplexer noise from the display. I was using a short random wire without a proper rf ground. I expect that if I had a proper RF ground or used un-balanced line to feed an antenna out doors this noise would not have been heard.
I always felt that for the money it was a good buy and still is at $100-$200 on the used market.

Also had an R-2000 that had a lot of spurs and constant problems with the push buttons on it. Sold down the road quickly.

My FRG 7700 was only slightly better to use than the FRG 7. The 7700 had teritble audio and was not a lot of "fun" (try to define fun!). I sold it pretty quickly too.

For dedicated SW use the FRG 100 is a great value. Lots of features and technology. The one I presently use on my night stand is my third one. This one has the Temp Compensated Crystal Oven making it the best yet.
However SWLing for me does not hold the magic that it did when I started in the early 60's. The FRG 100 is relegated to listening to a local broadcast AM station that hosts "Coast to Coast AM". Pretty much a waste of a fine receiver I admit. (Some would argue that using any radio to listen to Coast To Coast constitutes waste in itself...that

would be a different thread!)

In fact after writing this reply post I have decided to sell the
FRG-100

Source record: 26920

I have decided to sell my FRG 100 receiver. It is in excellent
condition and is from a non-smoking enviroment.
It is surplus to my needs now. I have a TS 850 that will be used here
for shortwave listening if I ever get that urge again.

I have owned this FRG 100 for about two years and am the second owner.
Incredible dial accuracy and stability due to the TCXO ($129 option)
Includes users manual and power supply. (manual is complete but has
signs that it was used. Lots of user features on this radio that are
descibed in the manual).

Don't let the lack of keyboard entry discourage you. When set up
properly you can engage one button, and rotate the main tuning dial
about 6 revolutions to go from 500KC to 30,000KC Pretty slick. The
tuning rate is compley user addressable as well as a lot of other
parameters.

USA buyers only.
E-mail to ron@onwisconsin.com
Thank you.

Ron

You got a better one than I have. It's prone to 50 Hz jumps at
any old time. Made narrowband RTTY and TOR monitoring a babysitting
operation.

Strange. Given all the stuff in there, I'm amazed that I can't pick up
anything except the 3.2768 MHz clock for the counter, a few spurs in the
15 MHz band (1/3 the first IF, I think) , and some 1 MHz harmonics in
the 20-30 MHz range. On the other hand, if you fire up a low band VHF
scanner next to it, there's an amazing amount of crap. It would make
a good 6 meter transmitter VFO if you tapped into the first LO.

Mark wrote:

For an explanation of the pitch of the note played by "Big Ben", please
see
http://www.hibberts.co.uk/stri ke.htm

For your convenience, an extract of the pertinent information follows:

"Big Ben has a nominal [pitch] of about 335Hz (it is doubletted) which
in
musical notation is E + 27 cents. Actually, the dominant note we hear
with
this bell is a secondary strike of about 440Hz, i.e. an A, based on a
partial above the octave nominal with a frequency of 883Hz"

Mark.
Auckland
New Zealand.

As a long time guitarist I found the link fascinating.
I attended a Christmas service with hand bells, and
thought they sounded "odd". Odd as in I noticed
the bells didn't sound like "pure" notes. I now understand,
to some degree at least, why.

I also found it interesting that Rayleigh also made breakthroughs
in understanding how light "waves:, and thus radio, behaves.

You know,

the number one thing we have to do, is get the big oil corps of the U.S.A.
to see that we must give up our dependence on oil for energy. We will ALWAYS
be caught in the middle of trouble if we continue to rely on foreign
countries for oil to run our country.

Without oil we shut down. Most of the countries that supply us with oil are
our enemies. China is NO FRIEND of ours.
We should cease trading with them completely or place a very high tax on
their goods to destroy their low value currency and slave labor techniques.

WE are supporting them and their military. They are doing everything they
can to make sure they can come out on top one day. Like I've always been
saying, if the Congress and Senate and others in top noches places in gov't
don't stop taking bribes from lobbists and other off shore bullshit, they
will sell out this country until there is nothing left to sell out.

We should **STOP giving money and aid to ALL these foreign countries that
hate us and use it to build up our own military.
I sure hope these higher ups realize what they are doing but allowing China
to keep growing at this amazing pace. Surely we understand we must maintain
a superior military bias in our favor and once another country can "take"
us, we're in trouble.

What I'm afraid of is China, Russia, North Korea and Iran all ganging up on
us at one time to destroy us. If they all colluded to attack us at the same
time, we would have a hard time trying to fight off a nuclear attack of
several missles at once. I don't think this is paranoid thinking. They ALL

want us out of the way.

Also, since Russia has shifted it's "gov't" back towards a communistic way of thinking and running things, they are in closer parallel to China and becoming better buddies.

Now, we have the Latin countries conspiring against us. Now, all these Latin countries will get loads of false propaganda and instill hate towards us all while we have wide open borders. If the people who run this country don't wise up real fast and give up their greed and power, I'm afraid our country won't be our country one day.

Never ever think the worst can't happen.
Stop all aid to these foreign countries and use that money to build up the best most superior military and technical defense we can.

Lucky

INSIDE THE RING

By Bill Gertz and Rowan Scarborough
July 8, 2005

Pentagon officials say an internal political battle has been under way in the Bush administration over the forthcoming annual report on China's military power.

The report was due for release several weeks ago, but was then held up and portions have been removed and modified, said officials familiar with the internal debate.

It is now set for release in the next week or two.

The draft report had included tough assessments of China's arms buildup and a stark conclusion that the military balance of power across the Taiwan Strait was shifting in Beijing's favor. The shift is because of a sharp increase in China's arms purchases and deployments, that include new missiles, warships, aircraft and communications gear.

Pentagon spokesman Larry Di Rita gave no clue to the behind-the-scenes wrangling over the report when asked about it this week. He acknowledged that other agencies are reviewing the report before its release.

Mr. Di Rita said the Pentagon report "is going to build on the knowledge of other agencies and departments" and that "we are trying to make sure that everybody has the opportunity to weigh in on it, to understand it."

The interagency battle over the report reflects the internal debate within the administration between those who do not view China as a near-term threat and those who are alarmed over China's recent weapons deployments and statements.

For example, in the early draft of the Pentagon's four-year defense review, China was not even included in the "terms of reference" for the review. The exclusion of China was later rejected by senior Pentagon and military officials as unrealistic.

Among those who do not regard China as a near-term threat are Thomas Fingar, the former State Department intelligence analyst who is now the U.S. intelligence community's top analyst under Director of National Intelligence John D. Negroponte. Mr. Fingar recently hired former Defense Intelligence Agency (DIA) analyst Lonnie Henley, who during his career at DIA developed a reputation as someone who played down China's military developments.

North Atlantic Ocean Temps Hit Record High

Email this Story

Jul 8, 10:00 AM (ET)

ST. JOHN'S, Newfoundland (AP) - Ocean temperatures in the North Atlantic hit an all-time high last year, raising concerns about the effects of global warming on one of the most sensitive and productive ecosystems in the world.

Sea ice off the coast of Newfoundland and Labrador was below normal for the tenth consecutive year and the water temperature outside St. John's Harbor was the highest on record in 2004, according to a report released Wednesday by the federal Fisheries Department.

The ocean surface off St. John's averaged almost two degrees Fahrenheit above normal, the highest in the 59 years the department has been compiling records.

And bottom temperatures were also one degree higher than normal, according the report.

"A two-degree temperature anomaly on the Grand Banks is pretty significant in the bottom areas, where temperatures only range a couple of degrees throughout the year," said Eugene Colbourne, an oceanographer with the Fisheries Department.

Water temperatures were above normal right across the North Atlantic last year, from Newfoundland to Greenland, Iceland and Norway.

The Newfoundland data is another wake-up call on climate change, say environmentalists.

Anchorage, Alaska, has seen annual snowfall shrink in the past decade, high river temperatures are killing off millions of spawning salmon in British Columbia and northern climates around the world have noticed warming.

Meanwhile, ocean temperatures have risen around the globe, and species are already dying, said Bill Wareham, acting director of marine conservation for the Vancouver-based David Suzuki Foundation.

"I don't think there's a question about whether these changes are happening," Wareham said.

But "everyone's quite shocked at the speed at which these things are changing."

Air temperatures in the Newfoundland region were also higher than normal, but Colbourne said the results are not conclusive.

Water temperatures in the cold Labrador current were actually below normal levels. And while the other temperatures were record highs, a similar warming trend occurred in the 1960s, Colbourne said.

"We really can't say for sure if what we're seeing in Newfoundland waters is a consequence of global warming, when we've only got 50 years of data or so," Colbourne said.

"It may be related to global warming but, then again, it may be just the natural cycle that we see in this area of the world."

The prices have stayed about the same-I think that the Drake R8B was going for US$1800 when it was discontinued-it's just that the dollar has depreciated. Since that ad was printed, the dollar has lost over 90% of its real value. For example, when the gold standard was discontinued in 1971, an ounce of gold was $35 IIRC (the fixed price under the Bretton Woods system). Now it's $440 an ounce, and certain to go higher. Even when the price of gold reached a 20 year low in 2001, it was $280 an ounce.The 2001 price was 8 times the 1971 price, which I think means an 80% drop in purchasing power for the dollar. ALL paper money has been greatly devalued since the gold standard was scrapped, since without a tie to gold paper money could be printed at will, and the governments of the world have done exactly that.

Hello All,

I applied for my ILG password shortly after it was announced that I would need one. I did not use my Yahoo! address as it is stated that such sites (Yahoo!, Hotmail, etc.) are sources of "Spam" and therefore no passwords will be sent to any e-mail addresses at these locations. (I cannot understand how not sending passwords to a Yahoo! address will lessen the "Spam" sent to him.) I used the address supplied by my ISP and I received the password in one day.

Later on, I wrote to him asking about the possibility of paying for his "premium" updates. After two months, he replied saying that it was not possible.

You have to follow his instructions TO THE LETTER, hope that he "likes" your ISP's name, and then have a little bit of luck.

I find that the hurdles are worth it, however, as the ILG database seemlessly integrates with the RxWINGS Computer Control Program I use with my AOR AR7030 Plus receiver.

There are two other databases which are very good as well:

http://www.primetimeshortwave.com/

and the PDF file available for downloading at:

http://www.wrth.com/

Both are free and excellent.

I hope this is of some use to you.

Best,

Joe

If you think that one was good...click on over to his other auction
listings.

Just about all of them have "private listing - bidders' identities
protected"
in the running bid history! (now what does THAT tell you boys & girls?)

This guy should be selling pre-owned cars! He'd make a heck of
alot more $$$ plus he'd be a 'natural'.

It's highly unusual to have cat 4 hurricanes so early in the season. You
see these things pop up in Spetember and October, but were still in July.

On another note, the waters around LI are unusually cool. Looks like the
flow is screwed up.

So, your logic is...you (Australia) do not want to get involved, so we'll blow you up. You (UK) did get involved, so we'll blow you up. You (Spain) used to be involved, so we'll blow you up. WTF?

Brad.

I was taught at school that we were still coming out of the last ice age,
only 50,000 years ago. Until we start heading into the next one, I'm not
going to panic. I'm not going to panic. I'm not going to panic.

Brad.

As I understood in geography class in jr. high, it seems to me that English, Scots and Irish were all British, and that the Scots and Irish tended to distinguish themselves from the English. And then there were the Welsh.

Simple, he's putting the blame for all of them onto the current US
administration. i.e. 'You're not with us, so you must be against us'.

Sure there's a variable of time in how the Earth behaves with temperature.
But you cannot re-introduce billions of tons of CO2 that have been trapped
for millions of years and not expect a change in the atmosphere and Earth's
temperature.

> On another note, the waters around LI are unusually cool. Looks like the
> flow is screwed up.

Unusual. Perhaps. But now outside the realm of possible. Just another outlyer on the statistical curve. Nothing more. All it does is add another data point to the process. What it does do is give the tree huggers and environmental sky-is-falling alarmists something to point to.

And IF I'm wrong.....I'll adapt. That's science you can count upon.

bill

They're terrorists. They kill civilians, including children. And you support them.

http://www.fas.org/irp/world/para/ira.htm

"IRA traditional activities have included bombings, assassinations, kidnappings, punishment beatings, extortion, smuggling, and robberies. Before the cease-fire in 1997, bombing campaigns had been conducted on various targets in Northern Ireland and Great Britain and included senior British Government officials, civilians, police, and British military targets. In October 2003, the IRA conducted a third act of arms decommissioning that the Independent International Commission on Decommissioning (IICD) called "considerably larger" than the previous IRA move. The group disposed of light, medium, and heavy weapons, ammunition, and explosives. The IRA retains the ability to conduct paramilitary operations. The IRA's extensive criminal activities reportedly provide the organizations with millions of dollars each year."

3307. U.S. Citizens Targeted for $Trillion$ U.N. Taxation Plan

Newsgroup: rec.radio.shortwave
Date: 2005-07-09 01:26:09 UTC
From: BagLady <LiChangchun@ccp.gov.cn>
Message-ID: <11cu9vfap6gae52@corp.supernews.com>
Source record: 26895

Shocking Truth Uncovered About U.N. Taxation Plan; U.S. Citizens Targeted for Trillions of Dollars by the International Bureaucrats and Insider-Trader George Soros

http://www.usasurvival.org/

Barbara Olson, author of Hell to Pay. The Unfolding Story of Hillary Rodham Clinton (Regnery Publishing, Inc. 1999), is a prominent Washington attorney who served as a congressional investigator and as a general counsel in the United States Senate. She was interviewed by Cliff Kincaid, president of America's Survival, on December 8, 2000. What follows is an edited transcript of that interview.

Q: Do you believe that Hillary Rodham Clinton is a Marxist?

A: I believe she has a political ideology that has its roots in Marxism. In her formative years, Marxism was a very important part of her ideology...But when you look at her ideas on health and education, you see more government and less individual control. You see very little regard for families...

Q: Do you see Hillary as in favor of Socialist-style thinking at the global level?

A: ...She spoke at the Beijing conference on women. She was very active in organizations and conferences that seem to be concerned about human rights but which are also directed toward a centralized governmental view. That is, one world. I looked at her travels and saw what she was doing. I always assumed Hillary was going to run for president. And I assumed that these international travels and her work with the Beijing women's conference and the U.N. were going to be her way into the White House; that she was going to have a foreign policy platform that not many women have...
...
She believes her ideology to the core. She believes in a true leftist, Socialist kind of government.

Q: She portrays her causes such as children's rights and women's rights in such an attractive manner. She has put conservatives on the defensive once again.

A: She has. That's the central focus of her public relations campaign...But her ideas about health care and education have very little to do with women and children. They are the lever she uses to bring the government into the family.

Q: She's been pushing treaties such as the Convention on the Rights of the Child and the Convention on the Elimination of All Forms of Discrimination

against Women. Isn't she promoting global government?

A: Yes.We all know about her book, It Takes a Village. She says the future is not family but the larger village of teachers, pediatricians and social workers. She talks about raising children as less of a parental task than a social one...You have the destruction of the family unit. That's very basic when you study Socialism and Marxism.
...
Much more

3318. China Warns Global Warming Will Become Extreme!

Newsgroup: rec.radio.shortwave
Date: 2005-07-09 02:12:01 UTC
From: Li`Changchun <LiChangchun@ccp.gov.cn>
Message-ID: <11cucl8ta26o571@corp.supernews.com>
Source record: 26704

China's gross domestic product is between 400 and 1,000 US dollars per capita, but its pollution levels are similar to those in western countries with a GDP per capita of between 3,000 and 10,000 dollars.

Unprecedented pollution in China's seas
http://www.asianews.it/view.php?l=en&art=3661
...
Sixteen out of the world's 20 most polluted cities are found in China.
Much of the pollution comes from the use of coal to produce energy; coal stations produce 75% of necessary energy.
...
http://www.asianews.it/view.php?l=en&art=3568

Do the math:

In the US there are about 745 vehicles per 1,000 persons.
In China there are about 8 vehicles per 1000 persons.

Today
China pop. 1,300,000,000 * (8/1000) = 10,400,000 cars
US pop. 296,555,646 * (745/1000) = 220,520,000 cars

FUTURE Year 2025 (est. pop.)
China pop. 1,500,000,000 * (745/1000) = 1,117,500,000 cars
US pop. 349,000,000 * (745/1000) = 260,000,000 cars

[not incl. motorcycles, buses or lawnmowers...]

Stick your Kyoto Treaty up your ass!

We simply don't know. We don't really know if this is part of a natural warming cycle-we were in a cold period from 1200-1800 AD-or greenhouse gas induced. It is known that at Lake Tahoe in the California mountains, forests covered areas that are now underwater. The desert southwest in the US has had 200 year long droughts in the past. At the other extreme, glaciers once covered what is now the US as far south as northern Mexico. Clearly, the earth has had major shifts in climate and weather patterns before, in times when auto emissions were not a factor.

The accompanying article doesn't seem to be about a "UN taxation plan" at all, but rather another rant against Hillary. I've never understood the absolute rage against Hillary present in the far right. Yes, she was a student radical, yes, she is probably in favor of Big Government, but so are many other politicians. But the blind hatred of Hillary goes beyond her positions or her philosophy. I have been forced to conclude that it's PERSONAL, that they hate Hillary because she's Hillary, not because she's a radical leftie or because she's for government regulation. Why conservatives hate Hillary the person, instead of Hillary the politician or Hillary the radical, I can't say, and they probably would be hard pressed to say as well. My best guess is that they hate her because she's a strong, independent woman. Conservatives, especially males, like their women to be barefoot, pregnant, and demure, not forceful and strong and intellectual. Hillary is living proof that some women will never go back to the 50s and be content with being housewives and mothers, and the far right wing men HATE that fact. Hillary is the most famous embodiment of it in today's America, so they target her.

> used to be involved, so we'll blow you up. WTF?

Actually, I would say that's pretty accurate. If you're not a jihadi Muslim, you're an evil infidel, so you're fair game. The terrorists even blow up Muslims who they deem to be insufficiently devout. When the terrorists ran Afghanistan, they hacked men's heads off for playing cards or owning pets, both of which were deemed to take away from pure devotion to Islam, and women's heads off for showing their ankles. They killed people for not praying at mosque seven times a day (traditional Islam demands only five prayers a day). Anything other than absolutely pure, 100% devotion to their form of Islam makes you an infidel who deserves to be killed. The terrorists want people to think only pure Muslim thoughts and act in pure Muslim ways, 100% of the time, 24-7. It's the kind of absolute devotion that Christians imagine of Jesus. It is also literally impossible for 99% of humanity.

I understand that Maine Power and Light has
raised the Electricity base KWH rate by about
20% this Summer. Plus add to that the fact that
Brother Stair has pretty much gone over to WWRB
means the cash ain't gonna roll in or go as far
as it used to do.

Stair may be a crackpot, but he still has listeners in
Europe and Africa who still think he's the best thing
since sliced bread, and will send him money that is now
going to WWRB.

y'all know how crazy kids are on bicycles.When I was a kid,I pedaled my bicycle for about six or seven years.I fell off only two times.One time was in the mud,the other time was when that girl who was riding on the handlebars stuck one of her feet into the front wheel,we went head over tails.I haven't pedaled a bicycle in a million years now,but I bet I can get on one (bicycle,that is) right now and not fall off.

Silicon Engines is moving especially slow on the project since I left the company, so I decided to do a stripped down version of the receiver as a baseline to compare the final unit to.
I had three prototype boards made.....one of them is for Jeff Woods, who wrote the DDS code for my general coverage receiver that I had up on my website for awhile (I still need to get that up again).
The other two are for myself.....one of them to play around with, and the other one for use as a design example at job interviews.
First impressions of this unit are quite good.....this experimental version has a balanced loop amplifier that is tuned with an NTE-618 varactor diode. The receiver is quite hot; the way it handles signals and the gain of the unit reminds me of a Collins 75A-4 receiver.
I will check it tomorrow to see how it does with daytime reception, but I am quite optimistic in my expectations.
I will let all of you know how it works out.

Pete

"East Germany and East Germany's economy was in shambles. "

Excellent point. Reagan didn't cause E. Germany nor Russian GNP to be so low, and it was economic realities which ultimately toppled communist Europe, not politics.

Most Islamic countries have terribly low income, too. Ditto for Latin America who are all Catholic. Protestant countries, like Scandinavia, the U.K., Germany, U.S.A., the Dutch, seem wealthier. But so are non Christian Japan, Taiwan, and then too China is making great progress. On the other hand Hindu India has rock bottom standard of living.

What makes some nations wealthy, some not? Religion, economic system? Not education because India are full of the educated poor. Not music either, witness the tone dead skree skraw atonal noise of Japanese theatre, whose nation is fabulously wealthy.

I have no answers, but somehow perhaps it occurs to me that religion or tradition or values seem to be most important to the ultimate economic success of a people, a nation, a culture.

Now I don't think that it's no walk down by the river bank finding no such a girl. They ain't knowing how to talk or write in that "language". Hell, they even think that a reversifying glass is called a "mirror". We all knows there ain't no such word. They do know how to milk, though. And it is not milking the cows I am thinking of.

I'll see what I can do. :-)

FO&A,
.
- -
.
Dear DXers,

We are happy to announce the creation of the SWL
Section in the Mediterraneo DX Club (MDXC).
<http://www.mdxc.org/swl/index.htm>

The goal of the Section is to group SWLs from all over
the world, for a better information & skills exchange,
and it's an opportunity for them to support
DXPeditions. We should be active.

The web site is now on line at
<http://www.mdxc.org/swl/index.htm>

All of you are invited to join us, to support us, for
the best of our hobby, SWLing..

Best 73's,

Steven FE05-DX, MDXC#236 (SWL Section Creator)
Achraf 3V4-002, MDXC#235 (Web design)
.
- -
.
Shortwave Listener (SWL) Section in the Mediterraneo DX Club (MDXC)

450 Sheep Jump to Their Deaths in Turkey

ISTANBUL, Turkey (AP) - First one sheep jumped to its death. Then stunned Turkish shepherds, who had left the herd to graze while they had breakfast, watched as nearly 1,500 others followed, each leaping off the same cliff, Turkish media reported.

In the end, 450 dead animals lay on top of one another in a billowy white pile, the Aksam newspaper said. Those who jumped later were saved as the pile got higher and the fall more cushioned, Aksam reported.

"There's nothing we can do. They're all wasted," Nevzat Bayhan, a member of one of 26 families whose sheep were grazing together in the herd, was quoted as saying by Aksam.

The estimated loss to families in the town of Gevas, located in Van province in eastern Turkey, tops $100,000, a significant amount of money in a country where average GDP per head is around $2,700.

"Every family had an average of 20 sheep," Aksam quoted another villager, Abdullah Hazar as saying. "But now only a few families have sheep left. It's going to be hard for us."

"According to myth gypsies crafted five nails for Christ's
execution not four. The fifth nail was meant to pierce his
heart, but the gypsies hid the fifth nail from the roman soldiers.
In some stories the gypsies were punished by God for
prolonging Christ's suffering, and in others they were
rewarded for attempting to protect him. The fifth nail is
said to have been a real religious artifact with miraculous
powers. Its existence today is somewhat
questionable, unless you consider the metaphor."

Perhaps your rant below simply reveals that you find Marxist-Socialist idealogy to be compatible with your "personal" view. Perhaps that "personal hatred" that you seem to perceive is a reflection of your "personal hatred" for conservatives.
I have found little evidence that shows Hilary Clintoon is nothing but a Marxist-Socialist. In which case, yes I have a "personal hatred" towards her. Just as so many of the Millions of families whose relatives were murdered by hineous leaders with that oh so famous "personal charisma" of Marxism-Socialism.

> but rather another rant against Hillary. I've never understood

Seems that no matter how I do this, people complain.
I'd like to thank the folks that offer suggestions to those who complain
about nothing.
Also, to thos to send me E-Mail with nothing in them, they are easy enough
to delete, 100's at a time if need be!

3388. Where I stand on the move

Newsgroup: rec.radio.shortwave
Date: 2005-07-09 14:41:10 UTC
From: Burr <pitz2@verizon.net>
Message-ID: <amRze.1393$Zy6.898@trnddc04>
Source record: 26826

This is where I stand right now. The closing of the loan on the house is on hold because of late paper work getting to the loan company. Looks about like two weeks from the 5th.

I was working as hard as I could trying to get boxes packed and shipped to the Philippines, getting the house repaired and selling my business and cars. I ran myself down to the point where I got sick, very sick. I also took a malaria pill and it just made things worst.

When the word came that they were not going to close on the 5th I stopped and went to bed. I think I went into pneumonia and I was one very sick person. My wife sat beside me as I sleep in a chair and beat the phlegm out of me every time I started coughing so I could breathe. I would have gone to the hospital if she had not helped me.

I got better Tuesday and a lot better by Thursday. I have done nothing but sleep and surf the net as I felt like it the last few days. I think I'll get back to packing and cleaning a little today as I feel like it. I am still weak.

They just found "Bird Flu" in the area of the Philippines where I am going so; I may take a month or so in the motor home and just "ride around" until the area is clear.

I'll say more when I know for sure that the house thing is going to happen. They are cutting me up on the house and there is nothing I can do but shut up, pay and wait, they have me over a barrel.

Burr

Barbara Olson died on September 11, 2001 aboard the plane that crashed
into the Pentagon.

Your credibility is shot. Maybe you and Rickets ought to get together
for a name-calling contest.

Right Telamon. The second time I ever heard them (about 2 years ago)
they played a whole billie holliday album straight through.
When I posted the above I was hearing beautiful Celtic music which
they followed with Jean Luc Ponty (or someone who sounded similar)
and jazz guitar.

No, it means that I am still learning to function, in spite of my physical disabilities. I spent two years that I couldn't walk without help, and didn't have the strength in my hands to hold on to tools or lift anything over about a half pound. I have made a lot of progress WRT my recovery, but it appears that you will always be a useless pain in the ass. Just pray that you don't reach a point in your life where you would welcome your own death.

Anytime.....I just got through running it through its paces this
afternoon. As I suspected, it is more sensitive than anything else I have
ever seen.
For this version, I am tuning the VCO with a 10-turn pot. Coverage is from
approximately 200kHz to 2.0MHz.
I did some measurements on the spectral purity of the VCO.

2nd harmonic is -45dBc
3rd harmonic is -65dBc
All other harmonics are below -80dBc

It would be better if it moved more quickly. That is the reason I had these prototypes made. I wanted to check the performance of the unit with this board layout. Results are very encouraging.

Please explain how you light a white LED when you only have a single
1.5 Volt cell and white LEDs take 3 volts or more?

That's a good question. I didn't really look into it any further than pulling an LED out of the parts box, putting it across a single cell, and seeing what happened. It lit, so I used it.

Someone last year asked for part numbers. I don't have any. I bought a box of LED's at a hamfest for a buck. Most of them light with a single cell.

As far as the 3v lower limit goes...I've noticed Digi-Key's LED's require at least 3v. Most of the LED's out today will light at much less than that. In fact, even Parts Express lists their superbright whites at 1.7-2.2 forward volts, with significant variation within and outside those numbers.

Information on and discussion of synchronous AM demodulators is scattered widely. There are sporadic discussions on a couple of Usenet news groups but they are restricted to text messages and it's hard to find the wheat in the chaff. This new group can accommodate schematics and pictures and provides a filtered view focussed on this one subject. In time, I hope that its collected files and discussions will make a strong starting or reference point for all with an interest in Sync AM.

Please join if you have ever designed or experimented with sync AM demodulators or intend to start. Visit the web site at http://groups.yahoo.com/group/Synch_AM/ to subscribe and then check out the Links section for some answers to What, Why and How. Your designs, experiences and participation in the on-topic discussions to ensue will be welcomed.

2104 GMT/2204 BST

Police evacuate Birmingham centre
Police in Birmingham are evacuating large parts of the city centre amid a security alert.

West Midlands Police said people were being asked to leave the centre, particularly Broad Street, as a "precautionary measure".

No vehicles are being allowed past the inner ring road into the city centre, and there have also been reports of controlled explosions by police.

Police said it was in response to intelligence the force had received.

"It's quite tense," said BBC journalist Toby Brown.

No vehicles are being allowed to be moved, he added.

Birmingham resident Kenneth Kelsall told the BBC: "There is a lot of confusion, there appears to be no chance of anyone moving back into the city - but people are remaining quiet."

West Midlands Police announced they had received intelligence of a possible threat to the area around 2015BST.

Initially people were told to be on their guard and that bars and restaurants were being searched. Motorists were also told not to come into the city centre.

Around 2100BST the police announced that the city was to be evacuated.

Hillary may be a commie, but you've got to admit that she's got charisma and guts. That can be either good or bad-both FDR and Hitler had it. I don't have a personal hatred for conservatives. I don't agree with the far right's extremist worldview, but they have a right to have that view as long as they don't try to force it on me. For too many on both the left and the right, politics has turned into a game of personal hatred-they hate the person because the person has a certain viewpoint, instead of disagreeing with the viewpoint but respecting the holder's personal integrity. You seem to agree with the idea that life should be a game of personal grudges, in which case I feel sorry for you. Most of us outgrew the grudge stage a long time ago, but people like you seem to be kept alive by your specific grudges against specific people, or against whole groups of people. You seem to think that everybody who doesn't agree with your specific views is evil. Sadly, you're not the only one who thinks this way-many evangelical Christians feel the same way, and they're running the country. In the Muslim world, such people are called jihadin, and they are out to kill everybody who doesn't agree with their "pure" devotion to Islam. Considering the history of Christianity, I would bet that the evangelicals would do the same if given half a chance. You can't argue with the type of religious devotion that demands the murder of all heretics, meaning all those who are insufficiently devout, even if they are from the same religious tradition.

3483. (OT) : Fatal Flaw in the Kyoto Environmental Accords

Newsgroup: rec.radio.shortwave
Date: 2005-07-09 23:29:42 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1120951782.702837.75990@o13g2000cwo.googlegroups.com>
Source record: 27070

RL,
.
And there is the Fatal Flaw in the Kyoto Environmental Accords :
Both China and India are exempt from the Standards that the USA
and Europe whould have to meet.
.
By the Year 2020 the Nation of China (PRC) will become the
Major World Wide Environmental Polluter in the World with
India being #2 or #3. With China's Total Environmental
Pollution from all sources exceeding both North America
(USA-Canada-Mexico) and Europe.
.
By the Year 2035 the Nation of India will become the Primary
World Wide Environmental Polluter in the World; and China
will be the second largest. The combined Total Environmental
Pollution from both the nations of India and China will be
greater than the all sources from 'The-Rest-of-the-World'.
.
FWIW in 2020 and 2035 the per capita Environmental Pollution
in the USA will still exceed the levels in both India and
China : But their ever increasing Amounts of Pollution
coupled with a Population that is still growing at a much
greater rate then the USA or Europe.
.
A very real Health Fact of the Future : At some point in time
(15 to 30 years out) more Americans and Europeans will Die
Each Year from China's and India's Environmental Pollution;
then from Cigarette Smoking and Auto Accidents.
.
now there is something to think about ~ RHF

I'd like to know who makes it and what the chemistry is. Standard white LEDs are blue and use a phosphor to convert it to white light. I have data sheets on over 100 different types of white LEDs and none are under 3 volts.

Clearly you don't believe me. So the back and forth isn't getting
either of us anywhere.

Look up LED's at Parts Express. You'll find all of them are 2.2
and under.

Go to RS and look in the drawers. But if you think you're going
to get anyone there to give you a manufacturer's name, you're going
to be disappointed.

Likewise the grab boxes at a hamfest.

I have no doubt that your data supports your position. The only
logical conclusion to be drawn is that either your data is
incomplete, or the LED's sold by Parts Express, RS, or the hamfest
vendor don't exist.

That would make my 3000-1 T/O something of an oddity, and I
supposed I should be making a posting on eBay right away. Certainly
would go a long way toward that estate in the Yukon I've been
dreaming about.

Have a good weekend, Michael.

I tuned in to the VOJ a few nights ago. Even though they said that they were broadcasting from Tehran, I felt that the announcers had accents which sounded Chinese, with the difficulty pronouncing "l" and "r" sounds. The signal was every bit as strong as from CRI, too.
Being that there are quite a few nations which are opposed to the US, and broadcast shortwave programming accordingly, I can believe that China would take shots at us in the name of the Iranians (even without any kind of agreement to do so) just to add more rhetoric against the United States in earshot of its people.
Yeah, I know that it sounds weird, but I've heard a lot of weird stuff on shortwave over the years.

The big question, of course, is whether the insurgents really see themselves as freedom fighters or as revolutionaries trying to impose an Islamic theocracy on Iraq by way of terror.

Well, sort of. They DO want what we have, and they want it for free. They have zero concept of the work that went into, say, this computer on my desk. To them, it's magic, and they think they can terrorize us into giving them the spells.

I've read that in the books about the End Times that circulate among Muslims in places like Palestine is the prediction that the "mahdi" (the End Times leader of Islam, sort of like the Second Coming of Jesus) will force the West to convert to Islam and to give him the secrets to their technology. It's a short jump from that to the conclusion that Osama is the mahdi, and that terror is how he will convert the West and gain the keys to the West's "magic".

In many parts of the Muslim world, the only education that boys (never girls) get is at religious schools, madrasas or their equivalents, and all they learn is how to recite the Quran and Islamic fundie, anti Western propaganda. Even in Saudi Arabia, the royal family's effort to get Saudis hired in the oil industry has failed because all the universities teach is Islamic theology. Not surprisingly, the unemployment rate in such places is sky high, and disillusioned young men pour into the terrorist networks. It's sad, really, to see so much potential wasted.

The Muslims want the Americans out of their countries, and if they could take over the running of the oil companies we COULD get out. But places like Saudi Arabia is dependent on American workers to run the rigs because there is virtually no homegrown educational system. So the locals have no concept of Western educational processes and of the ingenuity they spawn. They think it's magic. To them, Allah has blessed Americans and cursed Muslims, and they can't understand why. So they want to kill us all so Allah will be forced to bless them once again.

What we really need to do is give Muslims the means to create their own educational systems, not just systems where all boys learn is theology. Once enough Muslims have been educated properly and can take over the running of the oil industry, and enough military officers have been

educated so that they can create effective armies to combat terrorism,
then we can leave and leave the running of the Muslim world to Muslims
who know best how to run their countries. We wouldn't have to prop up
corrupt dictators for fear that the place would go to seed if we
withdrew.

Parts Express is not a fountain of knowledge and they give the same
operating specs for all colors of LEDs which is typical of a surplus
store.

> Go to RS and look in the drawers. But if you think you're going
> to get anyone there to give you a manufacturer's name, you're going

www.radioshack.com lists one white LED, stock number 276-320 with
these specs:

Typical MCD is 1100. Size is T-1- 3/4 or 5mm. Clear lens color. 20mA
(max). Typical Voltage is 3.6V. Comes as package of 1.

Do you have a different stock number I can request the specs for?

>
> Likewise the grab boxes at a hamfest.

There is a lot of discusion about white LEDS and driver circuits for
1.5 volt operation on news:alt.binaries.schematics.electronic I'm sure
they would love to find LEDs that don't require drivers.

VOJ is officially at least from Iran. It's possible that they get
technical help from China. It's also possible that they're broadcast
from a Chinese tx. Traditional Iranian SW has trouble reaching the US
because of the time difference-it's the middle of the day here when it's
the middle of the night there, or vice versa, so the signal tends to get
absorbed by the D layer. I've only heard Iran once here in California,
and that was in Farsi, and it was mixing with a CNR outlet, AND in the
middle of the night my time. (The Middle East tends to come in well for
a couple hours in the evenings, which is their local sunrise, but other
than that I don't hear a peep.) So it's concievable that the Iranians
have brokered a deal to use Chinese transmitters and Chinese technical
help in order to reach the US. BTW, what is the freq/time of VOJ? It's
been posted here before but I lost all my freq lists when I moved.

Sure, I'll get on that. It's about a 50 drive from where I am.
For a stock number. Not a problem.

Like I said, you clearly don't believe me. And typical of
internet discussions, now you've chosen to disbelieve outside
information which has been made available. Not surprising. And now,
asking now for MORE information, also suitable for dismissal. As I
said, the back and forth becomes pointless.

My original post still stands. In the conflict between your data
and my experience, the radio breaks the tie with a clear voice.

The only thing I can suggest, is start hitting some hamfests, and
try it for yourself.

And people wonder why some members stop posting here.

My reception of VOJ is pretty good here on the East Coast, but I'd never compare it to CRI. My guess is that VOJ is broadcast from Tehran, using quite a bit of power.

I actually pulled it off a newsblog from CA which deals
in clinical psychology, however I did recall attending a
lecture at UC Davis in which the above was discussed.

If you feel (or speculate) that my posting of the same
was somehow meant to coddle or condone the actions
of Mr Duncan and people like him, then you are at
best sadly mistaken and at worst somewhat delusional
and perhaps unable to apply constructive and intellectual
postgraduate level debate or discourse.

> which for anyone who doesn't know is the URL for the blog kept by the
> murderous pedophile Joe Duncan.
> He's the guy who's accused of murdering that family in Idaho and keeping
> 8-year-old Shasta Groene captive
> for (IIRC) seven weeks until they were spotted in a Denny's.

For your review:

"...and by a Gypsy smith (ironworker / forger) they passed, a smith
who nails was making. 'Thou dog, thou Gypsy dog' - said she,
'What is it thou art making? ''They're going to crucify a man
and I the nails am making.'"

6. Kenrick & Puxon. The Destiny of Europe's Gypsies.
Basic Books, Inc. New York, 1972; pg. 151.

The Nail
One of the nails that pierced Christ on the Cross.
This appears to be an iron nail without rust but with bloodstains.
Anyone holding the nail is incapable of lying and must
tell the truth. The Grail Guardians sometimes use this to test visitors.

The Grail Guardians do not know where the other 3 nails
are but do know the story of the fifth nail. (A gypsy was
asked by the Jews in the Temple to forge five nails
for a crucifixion, one for each wrist and ankle
and one for the heart, but the gypsy swallowed the
fifth nail so that Christ would not be killed on the
Cross but would be killed by the Spear. For this
the gypsies were cursed to wander the world.)

Part of Simon Phipp's RuneQuest/Glorantha Site
http://www.geocities.com/Area51/Rampart/1481/ae10.html

According to the Rev. Larry Merino, who evangelizes among
Gypsy communities in Indiana, the following communal myth
exists: "..at the Crucifixion site, a Gypsy stole a nail that was
intended to pierce the head of Jesus. The theft saved Christ
from even more agony and as a reward the gypsy people
were given a divine pass on the 8th Commandment."

(This nonsense is widely believed or at least - employed as
rationalisation.)

The latter is certainly possible. Duncan certainly didn't come up with the
story on his own, and I've been familiar with it (in a different version)
since I was a child.

> If you feel (or speculate) that my posting of the same
> was somehow meant to coddle or condone the actions
> of Mr Duncan and people like him,

According to google you've made a total of 5 posts as Saraclese Manboobs,
all of them after the capture of Joe Duncan and your version is word for
word what Duncan wrote. (With the obvious archiving assumptions, of course.)
I'm just pointing it out; others can make up their own minds, and you can
continue to use it at your own discretion.

But I sure wouldn't.

And of course, someone so obviously bright as yourself must see why I would question the sudden appearance of a new user (or a new nym), with a new sig file attached to a post quoting a news article that seemingly has nothing to do with the topic under discussion. Hmm.

I'll put it down to an unfortunate coincidence. Perhaps Duncan himself lifted it from the same site as you. I'd like to visit it myself.

But if you'd like to clear up for me just how your quoted story about suicidal sheep related to cuhulin's post about London, and how your sig file related to any of the above, I'd be grateful. :)

> best sadly mistaken and at worst somewhat delusional
> and perhaps unable to apply constructive and intellectual
> postgraduate level debate or discourse.

Any time you'd like to engage in said debate or discourse, consider me to be at your service...Manboobs.

Running the country? Your nuts! But that fact doesn't surprise me coming
from the Left.

> In the Muslim world, such people
> are called jihadin, and they are out to kill everybody who doesn't agree

Just now you figured that out? And here your spouting Chritian history as
if your a theologian.

> Considering the history of
> Christianity, I would bet that the evangelicals would do the same if
> given half a chance. You can't argue with the type of religious devotion

You seem to have a strange way of transposing ancient history into the
present
and the future. Are you an Islamic fundementalist? That would explain your
Christian grudge.
On the other hand, I suppose a Leftist would politely kneel down and kindly
beg for a Islamic beheading.

The only problem with your "association" is that the Chritianity today, the Chritianity I am familiar with (Not 1000 years ago which you seem to constantly regurgitate and not the fundementalists which you hilariously claim as running the country - still laughing over that one.) teaches love and forgiveness, kindness, unselfishness and truthfulness. Nowhere have I seen anything in Chritianity like the hate, murder, oppression, lies, etc., that I see in Islamic fundemntalism. But, I wouldn't expect a Leftist to easilly see this glaring difference.

These Islamic fundamentalist acts are exactly the same as what occurred in China during Mao and his Cultural Revolution.
Simply substitute Islam for the Communist Party.

Somehow I thought your being in the 'service' of Manboobs wouldn't affect my opinion of you in the least. I'm sad to say it has. I'm obviously not a big enough human being to accept the situation. I'm sorry..it's me, not you...

mike

..to himself..

perhaps moderate hormone injections would make *me* a BIGGER human being...I could get a B or C cup size while still maintaining my obviously manly, macho demeanor...can't overdo it though, I'll turn into a real Ace every twenty eight days..

3516. Who needs the ARRL, anyway?

Newsgroup: rec.radio.shortwave
Date: 2005-07-10 05:27:25 UTC
From: Who Needs The ARRL? <JIm@GuessWho>
Message-ID: <daqbi7$5k0$0@pita.alt.net>
Source record: 27003
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.shortwave

The ARRL is not a necessary institution these days. It is self-propagating, demands hefty dues and represents less than half of the licensed Amateurs in the United States.
Besides, what does one get for the $40.00 per annum (or is it more?) fee? A glossy magazine rife with advertisements? Admission to 'private' sections of the ARRL web site? A monthly 'bulletin' sent to your email address? (more spam)
Oh, wait. ARRL members get to vote on proposed rule changes, too. As if the FCC has ever given that much credence.

I guess there are still some old warhorses out and about who feel that it is a mark of distinction to have the ARRL logo on their QSL cards...especially those who boast of being part of the elite few, the proud, the Life Members.

One could likewise spend their Amateur Radio $$ on bigger and better things, such as paying good money after bad to join the Ten Ten Club, yet another wasteful expenditure of hard-earned money. Why not start a Twenty-Twenty Club? One could double the dues paid to the Ten Ten Club and claim twice the elitism.
The Twenty-Twenty Club could do as the Ten-Tenners do...refuse to speak with those not a member of their snooty group. Double the frequency, double the elitism.

CQ Contest, anyone?

Saraclese first reminded me of John Cleese, but that wasn't close enough. Then I thought 'paraclese', but the spelling is off, so it became Pericles. I then did a search on Pericles and Manboobs, and surprisingly, there were results.

> http://www.google.ca/search?hl=en&q=pericles+manboobs&btnG=Search&meta=

That lead to a search on Habib and it became clearer.

http://www.google.ca/search?hl=en&q=innocence+Habib&spell=1

It appears they are mocking Mamdouh Habib.

What short memories people have....

==========
The Christian Coalition and other rightwing religious groups supporting
Reagan even had a ï¿½biblical checklistï¿½ by which they wanted all senators and
congressmen to be judged. And one of the items in the ï¿½biblical checklistï¿½ was
ï¿½support for the Afghan ï¿½freedom fighters.ï¿½ The rightwing Christians were saying
in the 1980s that if you didnï¿½t support al-Qaeda and its Mujahidin allies, you
didnï¿½t deserve to be in Congress!

http://www.zackvision.com/weblog/archives/entry/000539.html
==========

"The Afghan Mujaheddin are the moral equivalent of the Founding Fathers of America."

Ah, yes. The song of the armchair quarterback. The results
are unpalatable, so you dismiss any information that supports them,
and then make accusations of obstruction.

God, I love the internet.

>
>> My original post still stands. In the conflict between your data

> typical white LED and defies the manufacture's data from every source
> I've checked..

And I gave you what information I had. The one source I gave
you, you dismissed as being unreliable. Ok, that's fine. We're not
debating a doctoral thesis, here. This is not groundbreaking
research. In fact, on the map of things that might be debated in the
group, this doesn't rise to the level of "Important." I substituted
a white LED for an incandscent dial light. It's as simple a matter
as that. It worked. And it clashes with the information you have.
I have no doubt that's true. It's obvious that the information you
have is incomplete. There's no crime in that. I've got data sheets
for audio chips that are less than 6 months out of release. They're
already so far out of date as to be no more than a curiosity. If
you're comfortable with the information you have, by all means, you
be comfortable.

You know, this entire issue is laughable, in light of the fact
that if you really want to believe that nothing exists outside your
data sheets, you can always take the next highest available voltage
on the T/O: 3V. Or 4.5. It's simplicity itself to simply tap the
battery box in a different location until you get the voltage you wish.

I didn't do that. I worked fine. Maybe I used LED's from
another planet. I wouldn't know. They weren't marked. They were
bought 100 for a buck at a hamfest in Waukesha. Same hamfest where
I bought 5 peltier junctions for $15. I'm guessing Digi-Key says

those those don't exist, either.

I almost bought a pair of Altec A-2 speakers at the same show.
But let's not even BEGIN to address how I would have got THOSE home.

I gave you what information I had, and you dismissed it out of
hand. I gave you an easily accessible source of parts that do fall
outside the limits of your data, and you dismissed that out of hand,
as well. I answered each of your questions to allow you to see for
yourself, and you dismissed the answers out of hand.

If you think I'm going to go any further after that, you're
mistaken.

Now, I sincerely hope the rest of your weekend is as much fun
as mine. I'm going to go assist with one of the helicopter shuttle
crews at the race track.

Be still my heart.

This is probably nothing, but I noticed that Universal has deleted the message that once used to be on its R-75 ad, stating that the R-75 is discontinued. I then went to the Icom America website, and noticed that the R-75 is there, even though I seem to recall its having been removed at one point.

Is there more to this than I think?

Steve

The all too clueless "cooltube" post a list of ancient crap FA.

Most of the time I just ingore your crap offereings.
But your rant got my attention.
Many, perhaps maybe most people in this and other NGs
already KNOW about Ebay. And go there to look for things
they want. Looking at this list I see very few things(1) that relate
directly to SW. Maybe you should at the trim your offerings to
stuff that is on topic.
Or even better, just stop posting this crap.

I make it a point to never buy from spammers and sir your
offereings are clearly spam. In the good old days jaber mouths
like you had their coax pinned. Too bad there is no similar
method of stoping you today.

That's a good question. And one that bears investigating.

In the last few years, a number of the major manufacturers of desktops have exited, or threatened to exit, the market. At least in North America. AOR withdrew 7030 and its variants from the US market. Icom announced the discontinuation of R-75. Drake appears to have left the building. Yeasu had announced that it had gigged the Frog.

And yet, FRG-100B appears to be alive and well. AOR returned 7030+ to North America, and R-75's demise appears to be on hold.

It may be that with declining competition, some manufacturers are rethinking their product life cycles. In the case of Icom, they're still in production with a wide range of radio gear, some popular HF ham gear included. With the appropriate economies of scale, production of R-75 in a competition reduced market could remain profitable.

Has anyone contacted Bellevue for a definitive position on R-75?

When should the 2006 editions of these two books appear?
I haven't bought a WRTH in many years, but think that it'd be good to have one as a reference for tropical band stations. I always liked the fact that they'd give information as to identification announcements and interval signals (remember when they had the actual musical notes), which can prove to be very useful when hunting DX. Do they still provide such information? Is the information _reasonably_ accurate (I think that most tropical band stations stay put, as opposed to major broadcasters who change frequency and times often)?

Hi

I have a Degen DE1103 already, and the AM reception is pretty good. I'm saving up for the new Grundig/Eton S350DL radio and was wondering if it has better AM reception than the DE1103.

I like listening to Coast to Coast on KFAB Nebraska from Manitoba Canada, but it's hit and miss with a radio. My local station airs the show but cuts out the bumper music. :(

That's absolute nonsense - there are thousands of Tropical Band stations
going strong,
and the WRTH is still the most authoritative source of information for
Mediumwave and Tropical Band that has ALL the info a serious DXer needs.
The blue pages are really for casual listeners to major broadcasters.
WRTH is kept uptodate by a comprehensive worldwide network of contributors
and there is no other publication to match it.
WRTH is published every year early December
see http://www.wrth.com/

The S350 (not DL) has better sensitivity than the DE-1103. However, it is
less selective.

You may find that a Sony ICF-SW7600GR works well--it has synchronous
detection.

There was a reason for it if you understood what the movie was about. The
Movie was "White Hunter Black Heart" and Clint played an obsessed director
named John Wilson and was based on director John Houston's eccentricities
wile shooting the movie "The African Queen" and his hunting quest wile in
Africa. Get the point?

There are 14 pages of Tropical Band stations listed in the Blue Pages.

That being said, this is from a review of WRTH 2005:

''RECEIVERS
We read that there continues to be a marked and continuing decline for
analogue broadcast systems worldwide, with digital radio becoming
widely accepted in many regions. We learn that the rate of
introduction of new SW receivers is in a downward spiral, with only a
very small number of new models appearing, except very cheap, limited
performance HF radios emerging from Asian sources.

WRTH strongly suggests that HF monitoring is now becoming mainly an
interest for technical hobbyists.''

This is from a review of WRTH 2003:

''National Radio

The steady movement of domestic SW services to MW and FM for local
coverage is again reflected, particularly in the African and Asian
entries. The Indonesian listings now number less than 20 active HF
broadcasters, and many African countries no longer provide any
domestic SW services at all. Many Pacific nations have also closed
down their SW services.''

Saraclese Manboobs sig:

"According to myth gypsies crafted five nails for Christ's
execution not four. The fifth nail was meant to pierce his
heart, but the gypsies hid the fifth nail from the roman soldiers.
In some stories the gypsies were punished by God for
prolonging Christ's suffering, and in others they were
rewarded for attempting to protect him. The fifth nail is
said to have been a real religious artifact with miraculous
powers. Its existence today is somewhat
questionable, unless you consider the metaphor."

- old story related to me while doing postgraduate
work at UC Davis
----------l
While there may be many problems with your idea that Gypsys
and a 5th nail had any thing to do witht he death of Christ, the
biggest is the "Gypsys" didn't exist until after 400AD!
For a short, non scholastic history, see:
<http://www.geocities.com/~patrin/timeline.htm>
I can supply more detailed, cross referenced links but
this one should suffice.

If in truth this was passed on as an "old story related to me
while doing postgraduate work at UC Davis", it shows how
silly universities have become.

I suspect a better explanation of the persecution of Gypsys
has more to do with their recent arrival in many places and
failure to conform to the local customs. No need to drag God
into there long time suffereing.

Terry

file
> related to any of the above, I'd be grateful. :)

Guess I would chalk it all up to the convergence of Venus and Mercury
in the SSW sky. (visible just after sunset right now around 8:30 PM)
Jupiter is almost overhead going to the left, with the crescent moon
moving to the same (Jupiter) for the next few nights. Very cool!

Jupiter is also a great RF noise source also. As I recall it's around 18
mHz
and a small yagi pointed in it's direction produces noticable white noise.

> Any time you'd like to engage in said debate or discourse, consider me to

Most the various color LED's I have seen are in the range Peter
indicated 1.7V -2.2V for fV but they lase before they reach their
forward voltage. They reach their specified light output power at the
forward voltage.

That's a good thought. And it's possible that Japan hasn't really been clear with Retail. If you'll recall when R-75 was released, I mentioned here a conversation with an ICOM rep I'd had at a ham show in which the rep said that complaints as echoed here about R-75's sync detector had been heard loud and clear in the hallowed halls. And that there were, indeed, revisions coming. And that the case clearly contained space for future hardware developments. Additional conversations with other ICOM reps repeated these details.

But no such revisions have been forthcoming, to date.

Conversations I've had with Bellevue, over the years, have indicated that they really don't know what the hell Japan is doing.

So, your thought is as good as any.

That may be a problem for somebody in Canada. The 7600 is no longer sold
in Canada, and Canadian customs is cracking down on stuff bought over
the net from the US and then shipped into Canada. He could always look
on Ebay for a used one, but he'll pay a premium. Another possibility is
looking on the ham swap sites for a cheap tabletop-most of them cover
the MW band, and their selectivity and sensitivity is usually far better
than a portable. I find that I have less fading issues with my Yaesu
than with any portable on MW.

3577. Reception last night and today 7/10

Newsgroup: rec.radio.shortwave
Date: 2005-07-10 20:33:20 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-A36288.13332010072005@newssvr21-ext.news.prodigy.com>
Source record: 27166

Last Saturday night West coast time the reception was good for me to the early hours of Sunday morning around 3AM. I tuned in again around 9AM and things sure went down hill since then.

Saturday I noticed the 21 MHz band was poor but other bands were good. Australia on 21,740 was poor and Radio Netherlands was good most of the time on the 17 and 15 MHz bands during their 19 to 21 UTC broadcast and today they are much weaker than yesterday on all frequencies.

You don't have to be an ARRL member to vote on proposed rule changes,
but I guess a troll wouldn't know that.

> interest for technical hobbyists.''

If that is indeed true, it's sad. The internet has technical limitations that become obvious as soon as Country X has a major natural disaster or terrorist attack and the Real Audio servers belonging to their national broadcaster crash from all the people piling on at once. Satellites often require the reciever to be line of sight to the bird, something that may not be a problem for a fixed dish like a DirecTV dish on a house but can be a big issue with XM or Sirius in a car.

Satellite services are usually controlled by one big corporate entity who decides what gets broadcast and what doesn't, and that corporation is subject to pressure from governments or major power blocs. Look at the controversy with New Tang TV or whatever it's called that was on Eutelsat until Eutelsat signed a deal with the CCP that required that

New Tang be yanked off the bird. Also, rumors persist that the US govt forbade satellite services to carry an Iranian TV channel broadcasting in English, calling it "intellectual terror" (an oxymoron?).

Digital services may have better fidelity, but you sacrifice the flexibility inherent in analog broadcasting, and especially in HF. It's like the current trend of young people not buying CDs because they can always download music for free off the net with CD quality-it looks like a good deal now, but if it keeps accelerating there won't be much of a music industry left after a while. Musicians won't want to perform if they can't get paid, and music companies won't want to put out CDs if they're not going to get paid for them. Soon there won't be any music to download.

If analog broadcasting-MW, SW, FM, TV-is killed off, it will make big corporations happy and it will make governments happy, but the big losers will be us, since we'll have to rely on tightly controlled sources for news, and that news will be mostly entertainment. The Daily Show-a fake comedy newscast shown on The Comedy Channel-has a higher percentage of news viewers than any of the traditional nightly news broadcasts, especially among youth. People expect to be entertained by the news, not informed by it, and the news will deliver, leading to a proliferation of Daily Shows and the death of real news. And without SW radio, we'll have to accept infotainment as fact, since we'll have no alternative.

Oh! So they might actually fix it. That is good news. If it get fixed
right I might buy one. It would have to be offered with some filter
options good SWBC listening for me to consider it.

Today Radio Netherlands was weak and noisy on both 17,735 and 17,660 and
also 15,315 right to the end of the broadcast at 21:00 UTC.

Yep and it looks to continue for at least a few more hours. Right now
Japan on 17,825 is pretty weak and noisy on most of the time.
Periodically they are good for a few minutes. I don't hold out much hope
of Australia being any good on 21,740 at 22:00 to 00:00 UTC.

Don't hold your breath. The conversation referred took place
several years ago.

You know, I've played with R-75 on and off since it's release.
It's not a bad radio. Not a 'best in class', except that it's pretty
much the only one left in that class. For the money it wasn't
exactly a bad value.

As has been pointed out here, though, a number of times, it's a
start out of the box, but requires finishing. If you have to drop
coin to modify it to get the radio it should have been all along,
then there are probably better alternatives.

Absent any competition in class, ICOM wouldn't be too highly
motivated to put forth the effort.

I've owned and still own a number of ICOM radios. Still use R-10 and R-7000 every day. And I owned R-71a for years. Wouldn't mind having that one back. But some of the corners cut by ICOM to save a few sheckels is baffling on radios of their otherwise significant quality. The result is a lot of promise, but, too often, short delivery.

He concievably could, although it's hard to find any stores that carry
the 7600 in stock, even in major cities. I called the nearest official
Sony outlet, in San Francisco, and asked them if they carried the 7600.
Their response: we don't have it in stock, but we can order one for you.
I ultimately bought a Degen off Ebay. If he's in Manitoba, the nearest

official Sony outlet in the US is going to be some distance away.

The Court Jester was the one guy who could get away with criticising
the King. The Daily Show rules. That and the BBC World Service (on
XM and Sirius 24/7) keep me reasonably sane. If all 6 of those
satellites fall down, I still have a house full of shortwaves.

Perhaps we should all have 40 Channel CBs, just in case.

Might be a good idea if the cell phone networks are shut down after a
terrorist attack (to prevent cell phones from being used as timers). I
remember when everybody carried an "emergency" CB in their car. Nowadays
we use cell phones. But the cell phone networks are vulnerable to
terrorist attack or being shut down after a terrorist attack.

If it's criticism of the king that you want, there's always Radio
Havana...

My neighbor has a new air conditioner and it's the source of some serious rfi. Has anyone ever worked to "cure" an air conditioner of this problem? If I give my neighbor some ferrites, will that suffice--or is my only option to pray for cooler weather?

Steve

We bought a new window AC that has an "electronic" thermostat.
Major PITA. Depending on how far away from your antenna it is,
ferrites can help a great deal. Along with ferrites, I had to open it
up and add bypass caps all over the place. They can be quitened,
but it isn't going to be easy. AS more and more simple tasks are
given CPUs to control them, the noise floor is always going up.
A sad fact of life. The ony good thing is our new Panasonic is smart
enough to know when the lights dipped during a compression cycle
and will wait ~15 minutes before allowing the compressor to cycle.

I like mine just fine out of the box. Well worth $500. The SSB works
very well for Utes, as well as MWDX and SWBC. The DSP is OK, but
doesn't enhance readability much. Notch filters are fun on WWV.

Source record: 27198

BALAD, Iraq - The first rule of war is that young men and women die. The second rule of war is that surgeons cannot change the first rule.

We had already done around a dozen surgical cases in the morning and the early afternoon. The entire medical staff had a professional meeting to discuss the business of the hospital and the care and treatment of burns.

It is not boastful or arrogant when I tell you that some of the best surgeons in the world were present - I have been to many institutions, and I have been all around the world, and at this point in time, with this level of experience, the best in the world are assembled here at Balad.

LTC Dave S., the Trauma Czar, and a real American hero is present. He has saved more people out here than anyone can imagine. The cast of characters includes two Air Force Academy graduates, Col (s) Joe W. and Maj. Max L. When you watch ER on television, the guys on the show are trying to be like Max - cool, methodical and professional. Max never misses anything on a trauma case because he sees everything on a patient and notes it the same way the great NFL running backs see the entire playing field when they are carrying the ball.

Joe is an ENT surgeon who is tenacious, bright, and technically correct every single time - I mean every single time. The guy has a lower tolerance for variance than NASA. LTC (s) Chris C. was the Surgeon of the Day (SOD), and I was the back-up SOD. Everyone else was there and available - as I said the best in the world.

As the meeting was breaking up, the call came in. An American soldier had been injured in an IED blast north of here, and he was in a bad way with head trauma. The specifics were fuzzy, but after three months here, what would need to be done was perfectly clear - the 332nd Expeditionary Medical Group readied for battle. All the surgeons started to gravitate toward the PLX which is the surgeons' ready room and centrally located midway to the ER, OR and radiology.

The lab personnel checked precious units of blood, and the pharmacy made ready all the medications and drugs we would need for the upcoming fight. An operating room was cleared, and surgical instruments were laid out, the anesthesia circuits were switched over, and the gasses were checked and rechecked. An anesthesiologist and two nurse anesthetists went over the plan of action as the OR supervisor made the personnel assignments.

In the ER, bags of IV fluids were carefully hung, battery packs were checked, and the ER nursing supervisor looked over the equipment to make sure all was in working order and the back-ups were ready just in case the primaries failed. The radiology techs moved forward in their lead gowns

bringing their portable machines like artillery men of old wheeling their cannon into place. Respiratory therapy set the mechanical ventilator, and double-checked the oxygen. Gowns, gloves, boots, and masks were donned by those who would be directly in the battle.

All of the resources - medical, mechanical and technological that America can bring to the war - were in place and ready along with the best skill and talent from techs to surgeons. The two neurosurgeons gathered by themselves to plan.

LTC A. is a neurosurgeon who still wears his pilot wings proudly. He used to be a T-38 instructor pilot, and some of the guys he trained to fly are now flying F-16s right here at Balad. He is good with his hands and calm under pressure. The other neurosurgeon is Maj. W., a gem of a surgeon who could play the guitar professionally if he was not dedicated to saving lives. A long time ago, at a place on the other side of the world called Oklahoma, I operated on his little brother after a car accident and helped to save his life.

The two neurosurgeons, Chris, and I joined for the briefing. Although I was the ranking officer of the group, Chris was the SOD and would be the flight lead. If this was a fighter sweep, all three of those guys would be Weapons School Patch wearers.

The plan was for me and the ER folks to assess, treat and stabilize the patient as rapidly as possible to get the guy into the hands of the neurosurgeons. The intel was that this was an IED blast, and those rarely come with a single, isolated injury. It makes no sense to save the guy's brain if you have not saved the heart pump that brings the oxygenated blood to the brain. With this kind of trauma, you must be deliberate and methodical, and you must be deliberate and methodical in a pretty damn big hurry.

All was ready, and we did not have to wait very long. The approaching rotors of a Blackhawk were heard, and Chris and I moved forward to the ER followed by several sets of surgeons' eyes as we went. We have also learned not to clog up the ER with surgeons giving orders. One guy runs the code, and the rest follow his instructions or stay out the way until they are needed.

They wheeled the soldier into the ER on a NATO gurney shortly after the chopper touched down. One look at the PJs' faces told me that the situation was grim. Their young faces were drawn and tight, and they moved with a sense of directed urgency. They did not even need to speak because the look in their eyes was pleading with us - hurry. And hurry

we did.

In a flurry of activity that would seem like chaos to the uninitiated, many things happened simultaneously. Max and I received the patient as Chris watched over the shoulder to pick out anything that might be missed. An initial survey indicated a young soldier with a wound to the head, and several other obvious lacerations on the extremities.

Max called out the injuries as they were found, and one of the techs wrote them down. The C-collar was checked, the chest was auscultated as the ET tube was switched to the ventilator. Chris took the history from the PJs because the patient was not conscious. All the wounds were examined and the dressings were removed except for the one on the head.

The patient was rolled on to his side while his neck was stabilized by my hands, and Max examined the backside from the toes to the head. When we rolled the patient back over, it was onto an X-ray plate that would allow us to take the chest X-Ray immediately. The first set of vitals revealed a low blood pressure; fluid would need to be given, and it appeared as though the peripheral vascular system was on the verge of collapse.

I called the move as experienced hands rolled him again for the final survey of the back and flanks and the X-Ray plate was removed and sent for development. As we positioned him for the next part of the trauma examination, I noted that the hands that were laid on this young man were Black, White, Hispanic, Asian, American Indian, Australian, Army, Air Force, Marine, Man, Woman, Young and Older: a true cross-section of our effort here in Iraq, but there was not much time to reflect.

The patient needed fluid resuscitation fast, and there were other things yet to be done. Chris watched the initial survey and the secondary survey with a situational awareness that comes from competence and experience. Chris is never flustered, never out of ideas, and his pulse is never above fifty.

With a steady, calm, and re-assuring voice, he directed the next steps to be taken. I moved down to the chest to start a central line, Max began an ultrasonic evaluation of the abdomen and pelvis. The X-rays and ultrasound examination were reviewed as I sewed the line in place, and it was clear to Chris that the young soldier's head was the only apparent life-threatening injury.

The two neurosurgeons came forward, and removed the gauze covering the soldier's wounded head, and everyone's heart sank as we saw the blossom of red blood spreading out from shredded white and grey matter of the brain. Experience told all the surgeons present that there was no way to survive the injury, and this was one battle the Medical Group was going to lose. But he was American, and it was not time to quit, yet.

Gentle pressure was applied over the wound, and the patient went directly to the CT scanner as drugs and fluids were pumped into the line to keep his heart and lungs functioning in a fading hope to restore the brain. The time elapsed from his arrival in the ER to the time he was in the CT scanner was five minutes.

The CT scan confirmed what we had feared. The wounds to the brain were horrific and mortal, and there was no way on earth to replace the volume of tissue that had been blasted away by the explosion. The neurosurgeons looked at the scan, they looked at the scan a second time, and then they re-examined the patient to confirm once again.

The OR crew waited anxiously outside the doors of radiology in the hope they would be utilized, but Chris, LTCs A and S., and Maj W. all agreed. There

was no brain activity whatsoever. The chaplain came to pray, and reluctantly, the vent was turned from full mechanical ventilation to flow by. He had no hint of respiratory activity, his heart that had beat so strongly early in the day ceased to beat forever, and he was pronounced dead.

The pumps were turned off; the machines were stopped, and the IVs were discontinued. Respectful quiet remained, and it was time to get ready for the next round of casualties. The techs and nurses gently moved the body over to the back of the ER to await mortuary services. And everyone agreed there was nothing more we could have done.

When it was quiet, there was time to really look at the young soldier and see him as he was. Young, probably in his late teens, with not an ounce of fat anywhere. His muscles were powerful and well defined, and in death, his face was pleasant and calm.

I am always surprised that anyone still has tears to shed here at Balad, but thank God they still do. The nurses and techs continued to care for him and do what they could. Not all the tubes and catheters can be removed because there is always a forensic investigation to be done at Dover AFB, but the nurses took out the lines they could. Fresh bandages were placed over the wounds, and the blood clots were washed from his hair as his wound was covered once more. His hands and feet were washed with care. A broken toenail was trimmed, and he was silently placed in the body bag when mortuary services arrived as gently as if they were tucking him into bed.

Later that night was Patriot Detail - our last goodbye for an American hero. All the volunteers gathered at Base Ops after midnight under a three-quarter moon that was partially hidden by high, thin clouds. There was only silence as the chief master sergeant gave the Detail its instructions. Soldiers, Airmen, and Marines, colonels, privates and sergeants, pilots, gunners, mechanics, surgeons and clerks all marched out side-by-side to the back of the waiting transport, and presently, the flag-draped coffin was carried through the cordon as military salutes were rendered.

The Detail marched back from the flight line, and slowly the doors of the big transport were secured. The chaplain offered prayers for anyone who wanted to participate, and then the group broke up as the people started to move away into the darkness. The big engines on the transport fired up, and the ground rumbled for miles as they took the runway. His duty was done - he had given the last full measure, and he was on his way home.

The first rule of war is that young men and women die. The second rule of war is that surgeons cannot change the first rule. I think the third rule of war should be that those who have given their all for our freedom are never forgotten, and they are always honored.

I wish there was not a war, and I wish our young people did not have to fight and die. But I cannot wish away evil men like Bin Laden and al-Zarqawi. These men are not wayward children who have gone astray; they are not great men who are simply misunderstood.

These are cold-blooded killers and they will kill you, me, and everyone we love and hold dear if we do not kill them first. You cannot reason with these people, you cannot negotiate with these people, and this war will not be over until they are dead. That is the ugly, awful, and brutal truth.

I wish the situation was different, but it is not. Americans have two choices. They can run from the threat, deny it exists, candy-coat it, debate it, and hope it goes away. And then, Americans will be fair game around the world and slaughtered by the thousands for the sheep they have become.

Our second choice is to crush these evil men where they live and for us to have the political will and courage to finish what we came over here to do. Freedom is not easy, and it comes with a terrible price - I saw the bill here yesterday.

The third rule of war should be that we never forget the sacrifices made by our young men and women, and we always honor them. We honor them by finishing what they came to accomplish. We remember them by never quitting and having the backbone and the guts to never bend to the yoke of oppression.

We honor them and remember them by having the courage to live free.

Col. Brett Wyrick is commander of the 154th Medical Group, Hawaii Air National Guard, and is serving as a surgeon in Balad with the 332nd Expeditionary Medical Group. This column is part of a series of email reports from Iraq that Wyrick has been sending to his father, a Vietnam-era fighter pilot, who in turn distributes them to a circle of friends and acquaintances.

Better yet 4 older hams on a 2 meter repeater on a saturday morning
discribing their heart attacks. How long they were in intensive care
and how much mobility they have lost.

Regrettably, this looks to be the case...

!!!

An Associated Press survey of longtime students of international terrorism finds them ever more convinced, in the aftermath of London's bloody Thursday, that the world has entered a long siege in a new kind of war.

They believe that al-Qaida is mutating into a global insurgency, a possible prototype for other 21st-century movements, technologically astute, almost leaderless. And the way out is far from clear.

In fact, says Michael Scheuer, the ex-CIA analyst, rather than move toward solutions, the United States took a big step backward by invading Iraq.

'Self-sustaining' jihad

Now, he said, "we're at the point where jihad is self-sustaining," where Islamic "holy warriors" in Iraq fight America with or without allegiance to al-Qaida's bin Laden.

The cold statistics of a RAND Corp. database show the impact of the explosion of violence in Iraq:

The 5,362 deaths from terrorism worldwide between March 2004 and March 2005 were almost double the total for the same 12-month period before the 2003 U.S. invasion.

I still wonder what the sales level has been for shortwave receivers for the last three or four years. I have never seen any data but I wonder how dismal the sales were and how much the web hurt. The number of people willing to shell out many hundreds of $$ for a shortwave radio may have shrunk to a very small number. Anyone seen any sales data for the last crop of receivers (R8B, R-75, RX-350, NRD-545)?

Well, if you were listening to something that boring to you, you
probably have enough sense to change to another repeater or turn the
radio off. James evidently can't do that. (I'm posting from my chair).

BBC coming in just fine on 9825 at 0200, very listenable. Radio Havana
on adjacent 9820 audible but with deep fading. I figure that Cuba should
get better as night falls. 3210 is a WWCR frequency I believe. Legally,
they're not supposed to be there, but the FCC doesn't seem inclined to
kick them off. At this time of year, WWCR on 3210 is practically the
only thing you'll hear in that area.

Islam was founded on the dream of "dar al-Islam"-an Islamic Earth, created through conquest. One scholar has said that the first Muslims felt the end of the world dawning and that Allah had called them to conquer the earth in the moment that was left. They came damn close, too-they spread Islam from Spain and sub Saharan Africa almost to China. Much of that area has remained Muslim. Afghanistan was Buddhist before the Muslim conquerors showed up, killed the monks, and forcibly converted everybody to Islam. The dream of an Islamic Earth has survived 1400 years. And now the terrorists have hooked their wagon to the horse of the pan Islamists, presenting terror as the way to finally defeat Christianity and Buddhism and create dar al-Islam. The main symbol of the Palestinian terror group Hamas is a green globe. Green is the color of Islam, so the message is clear-create dar al-Islam by terror. The last few paragraphs of that article say that the terrorists view their struggle as lasting centuries. When Osama exhorts his followers to outlast the West, he's thinking in terms of hundreds of years. And he will probably get his wish, since civilizations come and go but religion endures. Judaism has survived every attempt to eliminate it for 4000 years, for example. Long after Western Civilization is just a fading, distant memory, when all that will remain of our technology is legends about gods who flew in machines of steel and who stored libraries on chips of sand, the jihadin will still be around, and still working towards dar al-Islam.

I, personally, would be bored silly-probably a main reason why I never
felt motivated to become a ham. (I'm posting from rec.radio.shortwave.)

A very touching and poetic and sad story. I guess this means that the brave soldier above is added to the count of 1700 plus dead (to say nothing of the 13,000 or so brave young men and women who are missing arms, legs and various other body parts).

I 110% support out troops, but please refresh my memory as to why we are in Iraq and tell me why our kids are ending up like that.

First, no one has ever said that Bin Laden and al-Zarqawi are in Iraq.

Paul (sorry, I forgot his last name), the former Secretary of Treasury, said in his book that W was itching to go into Iraq from Day One.

Another guy, the Security Adviser for Clinton *and* W, said the same thing in his book.

The recently revealed "Downing Street Memo" said exactly the same thing.

Not one, not two, but three--count 'em, *THREE*-- UN inspectors said there *are no WMDs in Iraq*.

Around Christmas time of 2004 even W's own administration *admitted* there were no WMDs in Iraq.

Oh, as a final note, 15 of the 19 mad dog 9/11 a$$holes were from --are you ready for this?-- Saudi Arabia! I don't think any of them were from Iraq. Tell me why we are not in Saudi Arabia--it would at least make a bit more sense.

How many "smoking guns" do you need before you realize that we are maiming and killing our kids for bogus reasons (dare I say lies)?

So, please, tell me again why we are in Iraq and why we have to read sad stories like the above about our brave young kids.

73,
Carter K8VT

P.S.
...and puh-leze don't trot out the tired old saw that we are at war because "Saddam was a mean, rotten guy and that the world is better off with out him". There are numerous mean, rotten bastard leaders in this world that fit that description and we are not doing anything about

them. Heck, from seeing all the world-wide anti-W demonstrations on TV, there are probably a few million people around the world (and 49% of the American voters) that think the world would be a better place without W. at the helm. So what? Neither is a reason to go to war.

Yeah wasn't good tonite at all (3:00 - 4:00 UTC). My favorite 31 meter band
was very noisey and the 19 meter band was very bad.

BBC on 9825 at 0200 was fine. I checked 15170 at 0300 and noticed that
Saudi Arabia wasn't there-last night I heard a faint but listenable
signal with prayers that went on for 30 minutes, continuously. It was
that wailing chanting and it didn't stop for a half hour.

Very similar to the Spanish conquest of South America, among others. They were barbarians in the name of God. Christians have killed more people due to an alleged religious fervor than anyone else. Bush is continuing the unholy Crusades. He's even said so.

I'm confused, however..he dresses out of role..

According to
http://www.sec.noaa.gov/alerts/warnings_timeline.html
EXTENDED WARNING: Geomagnetic K-index of 5
is extended through till some time tomorrow afternoon.

Things have recovered somewhat as I have a good signal on New Zealand
and Australia on the 15 MHz band.

3648. WDLT 660 Mobile AL, daytime power at night?

Newsgroup: rec.radio.shortwave
Date: 2005-07-11 12:03:46 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <42D2602E.364A@mindspring.com>
Source record: 27137

Mobile AL WDLT 660 kHz has been booming in Central Ohio for the last
couple of weeks at 05:30 EDST, where their license has them on low power and a
null steered to the north. Evidently they're badly out of spec
for one reason or another.

Are they running 10kw omnidirectional at night? They sound like a local here.

Today I checked at 04:00 EDST and they're there then too. Normally I hear
WFAN 660 NYC, which more or less owns the channel at night except for Cubans.

I tuned in to 14325 a few times and depending on the time they were either reading the NWS hurricane report or calling for checkins from the areas hit by the hurricane. The only checkins I heard were from guys running the net and a few out of hurricane area checkins. Pretty quiet.

A blog on the Weather Undergound weather website noted traffic from hams in Cuba describing the damage, but no frequency was mentioned. The USA coverage of the hurricane as it hit Cuba was pretty thin considering the damage that was done.

I personally want to know what their educational
system thinks of the Golden Age of the Islamic
states, when the West was in the late Dark Ages
and the Middle Ages. After all, the Islamic centers
of learning inherited the knowledge of the Greeks
and Romans, and applied that knowledge to a high
degree. It's about as secular as the Muslim world

became, but I wonder if that's ever mentioned today.

Entrenchment. Look how long K1ZZ has been there.

HOWEVER, everything could change IF the membership weren't so...
comfortable. And, within his small corner of the universe, Jim Haynie
(sp!) upset the applecart by trying something... new.

> Where does the money from the fees go, exactly?

Well, I don't think K1ZZ has ramen in his home... but the lab gear is
for-real, and I imagine some is shoveled back into QST.

> How much utility does QST really have?

Actually, a fair amount, even if the technical quality is iffy these
days since they want to push QEX. There is a "community" of sorts put
together by things like a magazine. In the July issue, I think, I
recall some columnist lamenting about FM interference with translator
satellites, and saying, "I'm sure no FM repeater user is reading this
article..." but he was wrong. I read the areas that don't pertain to
me because there's always something to learn in the other areas.

> How strong of a lobbying force is the ARRL with the FCC - really?

In a conversation with their former lobbyist (SK), he told me that the
ARRL picks and chooses its fights very carefully to make sure that it
has some weight. (John Hennesse?)

Bureaucracy: a system of administration marked by officialism, red tape,
and proliferation

I've been a member of some ham clubs that were
not bureaucratic and they were an organization - it was more
like a fraternity.

> > What can happen in a bureaucratic organization?
> I don't know, since the term just describes the structure.
>

Well, aren't some bureaucratic organizations corrupt due to the bureaucracy?
If it can happen in other bureaucracies, can it happen in the ARRL?

I think about the efforts of the ARRL to persuade the FCC to give us
useful allocations in the Lowfer segments - there's a huge opportunity
for hams to do what they do best - be on the cutting edge and invent

methods to communicate in difficult situations. Only one example of many.

Here's a more complete description of bureaucracy. Max Weber has
probably been one of the most influential users of the word in its
social science sense. He is well-known for his study of
bureaucratization of society; many aspects of modern public
administration go back to him; a classic, hierarchically organized
civil service of the continental type is-if basically
mistakenly-called "Weberian civil service".

However, contrary to popular belief, "bureaucracy" was an English word
before Weber; the Oxford English Dictionary cites usage in several
different years between 1818 and 1860, prior to Weber's birth in 1864.
The term can characterize either governmental or nongovernmental
organizations and comes from the French word bureaucratie, from bureau
"office, desk" and the greek suffix -kratia "power". It was first used
by 18th century French economist Jean Claude Marie Vincent de Gournay
(1712-1759).

That's obvious - I would look on their website for a copy of their
audited annual statement in which the auditors gave a clean opinion.
Also look at the filing they make with the IRS as a tax exempt entity.
Magazines also publish periodic disclosures of subsriptions and sales.

>

> > > How much utility does QST really have?

I'm not a member, but if I were, high on the list would be: It's a
fraternity of like minded people who enjoy both the hobby and
one-another's company (most of the time) on the air.

>
> > > How strong of a lobbying force is the ARRL with the FCC - really?

You asked how strong a lobbying force the ARRL was, but didn't answer
the question.

Actually, the ARRL has a much bigger issue to weigh in on than
expanding the ham bands. The ARRL will be doing well to hold on to
what amateurs have given the trends in membership and demands for
commercial use of spectrum allocated to hams.

As the official hobby organ they have to figure out pretty quickly how
to breathe some life into a mature hobby that is facing some stiff
competition from methoods of communicating that require no license.
The hobby is greying rapidly.

>

Drudge now has a link to this story in the Houston Chronicle:

http://www.chron.com/cs/CDA/printstory.mpl/tech/news/3259278

The news article puts alot of emphasis on the usefulness of BPL for such utility operations as power switching and meter reading:

"But where we really think it will work well is in such areas as remotely reading gas and electric meters and remotely turning on and off power service for customers in the competitive retail electric markets," Standish said.

The reporter doesn't mention the widespread failures of BPL, but he doesn't seem to have bought into the usual self-serving BPL hype either:

"High-speed Internet access is available to more than 95 percent of Americans, according to a recent study by the Federal Communications Commission. That means companies providing the service through a new medium, like power lines, have their work cut out for them when it comes to landing new customers, says Ron Cowles, an analyst with technology research firm Gartner."

I don't know what's happening with BPL in this latest incarnation. BPL hasn't had many successes in real world trials. I suppose it's possible the BPL proponents are scaling back their promises and are talking up it's usefulness for remote data reading and control.

Imperfect though it is, the ARRL is the only voice the ham hobby has these days. It would be a very poor idea to do away with the ARRL without having something better to replace it.

The ARRL does need to refocus it's efforts toward attracting newer younger members to the hobby if it is to survive long term. The hobby won't survive if its quasi-regulator continues to do treat amateur radio as though it operates in the heyday that was the 1950's.

I am in San Diego, and I noticed last night I couldn't even get some AM stations let alone SW broadcasts. I was able to hear Japan and Taiwan ok, but Australia which is usually strong, was really bad.

Hi Peter,

I own several radios and for the money, the R75 just can't be beat. It just can't. I paid $425 after specials for mine brand new w/DSP. The performance outta that receiver is freaking amazing for me here in Florida. If I need to pull a signal out of total garbage and can make out what's being sent I can do it with the R75.

The Twin PBT with the coupling of different filters {I have a pair of 2.8's added} and the DSP that is not bad at all, makes this a superb unit for the price. Add the remote control option and the UT-102 voice synthesizer and it's a very fun unit.

I don't know how any SWL-DX'er in the know doesn't own one unless it's a more expensive unit.

Just MHO :)

Lucky

I've heard them from ...
Noblejas, Spain
Sackville, Canada
Cerrick, Albania
Havana, Cuba and
Kashi, China

different transmitters at different times... you can hear
them all pretty easily though... the Kashi one was
weaker than the rest of course but very readable

I'm in the eastern US by the way... that could make a difference, not sure.

I don't know of a reliable source that would consolidate sales volume
for shortwave receivers. I'm sure the folks at WRTH, Grove and PBWR
have a pretty good sense for the way sales are going, getting them to
release anything might be impossible. Unfortunately we can infer
not-too-good-news about the volume of sales by looking at the number of
shortwave retail outlets that have closed and the number of companies
that dropped out of the shortwave market.

The Kashi transmission I logged was on
17.650 but not targetted at North America
I think it was aimed at Europe... we
were having really good conditions that day.

I'll try it again soon and see what happens

Does one have to be a member of the ARRL and receive QST to
be "...a fraternity of like minded people..., etc.?" Your example does not
provide a convincing argument for what I asked for.

> >

> > many.
>
> You asked how strong a lobbying force the ARRL was, but didn't answer
> the question.

Yes, I did. I answered the question by providing an example. Part of the lobbying efforts of the ARRL *is* to encourage technological innovation and strongly petitioning the FCC to provide useful lowfer segments is a perfect example of an area where hams could further the communication art. If the ARRL could accomplish such a feat, it would be a *very* clear indication of how strong they are as lobbyists.

> Actually, the ARRL has a much bigger issue to weigh in on than
> expanding the ham bands. The ARRL will be doing well to hold on to
> what amateurs have given the trends in membership and demands for
> commercial use of spectrum allocated to hams.

Yes, there are big issues at stake - the threat of BPL comes to mind.

> As the official hobby organ they have to figure out pretty quickly how
> to breathe some life into a mature hobby that is facing some stiff
> competition from methoods of communicating that require no license.
> The hobby is greying rapidly.

Yes, I've been hearing very similar musings for many years, and yet here we are.

As far as "greying": I see an integration of new technology with radio - like hams have always done - EchoLink and the like, if you like that sort of thing. I've also been hearing new modulation methods on the bands - DigTRX for one. Then there's microwaves. The sky is the limit in the microwave segments (and above) - literally.

An audited financial statement with a clean opinion is a pretty strong
document unless of course you are saying or implying that the ARRL is
posting a fraudulent financial statement on their website. That is a
pretty strong accusation and I hope you have something to back it up.

Put simply the people who are members of the ARRL share common
interests in amateur radio and enjoy communicating over the radio
waves. For those people the QST magazine is like any other hobbyist
mag a source of information and a way to read what the rest of the

hobby is doing. Pretty simple....

That's small potatoes compared to what they should be doing. Which is
to work with the federal regulator to establish meaningful tests and
find ways to attract new blood into the hobby.
>

> > >
> >
> > Yes, there are big issues at stake - the threat of BPL comes to mind.

You are focused on the trees - minor technical issues. The life of
this hobby is at risk if the ARRL doesn't get it's collective head out
of the sand and make the radio hobby interesting enough to attract the
teens and 20somethings. If the league want's to retain tests as a way
of controlling access they have to test on things that are relevant to
safe and effective radio operation as it is practiced now.

> here we are.

Yes, here we are. Amateur radio retailers are going out of business
because of declining sales. There still is a considerable body of
licensed amateurs, but when I listen on the bands every conversation I
hear tells me their average age is increasing.

>
> As far as "greying": I see an integration of new technology with radio -

Yes, there are new modes, but try convincing someone with immediate
access to numerous unlicensed ways of communicating that it is somehow
worthwhile to learn archaic morse code and sit for partly meaningful
written tests to gain ham privileges. Those potential young hams can
talk with large parts of the world using common everday electronic
devices. How do licensed hams convince those outside the hobby that
ham radio still offers something unique. I don't have an answer, but
the ARRL and it's members better get outside the box and do some
serious thinking.

Well, let's look at the last few months:

Reviews of equipment, software, digital communications modes.
Basic theory and experiments for newcomers.
Construction projects - ancient and modern.
Various antenna designs.
Hints for solving problems with the latest commercial equipment.

I don't particulary like the ARRL, would not feel the loss if they went away, and am not into contests or Ham politics; but I have no trouble finding interesting stuff in QST.

Dave

Damn, and here I thought that the 20M band was at about half the frequency of the 10M band. Did those rascals at ARRL go and change that too? Where on the dial can I now find my 20M buddies, up in the old 5M band? I thought we'd lost that band way back in the 40's.

I agree with you 100 %. I use an R-75 as my primary radio. It is a great radio for DX. I got mine brand new for under $500.00 with the free UT-106 unit included. I almost always use ecss tuning with the R-75 in ssb mode when I scout for DX. I find that there isn't anything that I can hear with the R-75 that I can hear with more expensive radios. Earlier in the year, I was considering getting a new radio as an upgrade to the R-75. I was lucky enough to be able to borrow an NRD-545 from a friend to do some experimenting. I found that the R-75 was just as capable as the NRD-545. The experimentation convinced me not to spend more money on a new radio. I came up with the conclusion that regardless of what radio I get, I wont be able to hear anything that I cant hear on my R-75. This is partly a compliment to the R-75 and partly a realization that my geographic area is not a good area to DX in. I live in a highly populated area in NJ with lots of noise sources. No matter how expensive of a receiver I get, it wont matter one bit !!! My DX bottle-neck is my area and not my radio. Still...

The R-75 does quite well considering !!!

Well, I guess that takes out the "useful" part, but David has certainly
earned the rest of the moniker.

BPL *is not* a *minor* technical issue - such a statement shows a high
level of ignorance. Have you ever tried to work a station on 432 Mhz
off the moon? I have tried and succeeded. BPL would increase noise
levels tremendously on the weak signal portions of the upper bands. Even
the FCC website acknowledges this. The ARRL is working to lobby
against BPL, but they're doing a very poor job. I know it and other
hams who know what they're talking about tell me the same thing.

>The life of
> this hobby is at risk if the ARRL doesn't get it's collective head out

Who says the ARRL wants to retain tests to control access? Is testing
only to determine one's competence in ..."safe and effective radio
operation...?"
When I took the tests, there were questions about electronics, knowing
what classes could operate on which frequencies, permissible unattended
station operation, propagation, much more.

> Yes, here we are. Amateur radio retailers are going out of business
> because of declining sales. There still is a considerable body of

Which retailers are going out of business?

Yes, there have been studies which show the average age is increasing.

Every conversation? That's hyperbole.

> Yes, there are new modes, but try convincing someone with immediate
> access to numerous unlicensed ways of communicating that it is somehow
> worthwhile to learn archaic morse code

Whew! Talk about unleashing a bomb with that statement! That's a huge
can of worms and millions of words have been written about that.

You cn worry about BPL 'till the cows come home. It won't make one
whit of difference if the number of active hams continues its steady
decline.

The only reason ARRL retains its out of date tests is to control access
to the bands, or to act as gatekeeper. And to keep an ever aging group
of members happy because they are requiring the same meaningless morse
code test that the grey hairs took 40 years ago.

The morse code test is the equivalent of requiring prospective car
drivers to know how to control a horse and buggy. Fact is the 20
somethings have little or no interest in ham radio and all of its
quaint licenses.

You couldn't be more wrong. I read a statistical study in which the number
of hams world-wide *and* in the U.S. has shown to be steadily increasing.

> >
> > >The life of

You said the hobby is at risk - prove it.

> The only reason ARRL retains its out of date tests is to control access
> to the bands, or to act as gatekeeper. And to keep an ever aging group

Once again - *prove* the the reason the "...ARRL retains its out of date
tests is to control access
to the bands, or to act as gatekeeper..."

<snip>

> Which retailers are going out of business?
>
> They've already gone.

Ummm - the retailers I've dealt with for *years* are still in business.
You completely avoided an answer to my question - you didn't even
cite one example.

>
> The morse code test is the equivalent of requiring prospective car
> drivers to know how to control a horse and buggy. Fact is the 20
> somethings have little or no interest in ham radio and all of its

I can discuss situations in which morse code is the most effective way
to communicate in certain situations until I'm blue in the face - it won't

change your mind - I've already cited examples and you didn't say a word about them. I wonder why?

Yeah, that too. Politics in the US has become a zero sum game of tearing
down personalities rather than solving problems. Even the founders had
their share of tearing down, but they buckled down and got to work in
the end, which is much more than can be said for today's politicians.
With this version of politics, we won't need any Al Qaeda to help us
self destruct.

If it is, it's probably mentioned in the context of "Allah blessed us
and made us great but the Jews and Crusaders stole it from us, so we
need to kill them in order to get it back". I wonder if the average
Muslim has any more than a cursory knowledge of the ass kicking that
Saladin delivered to the Crusaders. All they remember is how the
Crusaders put the entire population of Jerusalem, including Christians,
to the sword. From what I've read, Muslim "education" is one long litany
of "the West did us wrong, so kill them". Fundamentalist movements by
themselves are not necessarily dangerous-many fundies of all three
monotheistic religions believe some pretty wacky things without turning
violent. But when fundamentalism becomes politicized, and starts looking
for people to blame and kill so that the end of history can hurry up and
arrive, then it becomes quite dangerous.

Whats the matter, Li, have you run out of dirty deeds committed by the CCP to highlight? First I'm a commie, then I'm a Muslim fundie. Has it ever occurred to your small mind that the two philosophies are diametrically opposed? Has it ever occurred to you that with all the hate in your heart-you hate China, you hate liberals, you hate California, you hate Islam-that you're drowning in a sea of your own hate?

Well, if Christians and Jews strictly adhered to the screwed up elements
of THEIR faiths, we'd ALL be barely existing. All major religions have
their weird parts. But there's more at work than just religion-the

entire culture of the Muslim world puts them at a disadvantage. They don't have an educational system, they don't have anything close to democratic institutions, they don't have respect for anybody or anything. The Muslim imam arrested in California on suspicion of recruiting jihadin told his judge that he was amazed to see how we care for animals here. In Muslim societies animals are considered nuisances, dogs are neglected because they're "unclean". Muslim societies are still based on antiquated notions of revenge. And of course they systematically bar 50% of their population (women) from having any say in their lives, much less any rights. In Saudi Arabia dating is prohibited, boys and girls are reduced to writing phone numbers on slips of paper, wadding them up, and throwing them at each other. Most marriages are arranged. Women are kept literally hidden away from the world. The extreme was in Afghanistan, where women were required to stay inside all the time in homes with painted over windows. It's very much a male society, much like the West was in the Middle Ages, only more extreme. The sad part is that there was a time when Islam DID dominate, in the first few centuries of the faith. Cairo was the center of learning for the entire known world, Arabia was a major trading center, Muslims had advanced institutions. It seems that the peak of Islam was in the 10th century, and it's been downhill for the last thousand years.
>

Of course, the dictators and kings have lots of wealth, but it's all based on oil. They simply drill into the sand and keep the proceeds. One observer compared Riyadh to Las Vegas, with huge, glitzy palaces surrounded by modest homes. But Las Vegas has produced a stable middle class society, while Saudis live amid decay and penury. Much of Riyadh is decaying, while the royals build fabulous palaces set in compounds where the roads are paved with marble. The royals keep the average person from getting any power or control or any of the oil wealth. They hoard it all for themselves, and with the blessing of the US. Former CIA agent Robert Baer wrote that he's surprised that there hasn't yet been a revolution in SA. Of course, if there WAS a revolution, they'd simply be replacing the king with the mullahs. Throwing one dictator out and gaining another. That's what the Iranians discovered when they tossed out the US backed Shah and handed power to the ayatollahs. The ayatollahs turned out to be worse in many ways than the shah, but they'd given them legitimacy, so they were stuck. And now the ayatollahs are threatening to nuke Israel in order to make a point. The Iranian people aren't stupid, they know that if the ayatollahs ever did that that Iran would vaporize under nukes Made in USA, but they have no control over their own government, so they can't do anything about it. The ayatollahs aren't elected, the only elections allowed take place only with ayatollah approved candidates and with ayatollah approved results, and the Iranian Parliament chants "Death to America, death to Israel!" while the people look on helplessly, realizing that the mullahs' lust for

power will kill them all.
>
> The only thing they want of ours is our success. Everything else we have --
> every other tangible or intangible thing, philosophy, tenet or belief --
> they want *no-one* to have, enjoy or desire. All is according to the koran.
> Nothing else matters.

They can't understand why Allah has not blessed them with success,
despite following every commandment of his in the Quran. They don't
understand why America has all the good fortune, and they don't. They
don't see that our success has been dependent on many interrelated
factors, plus some luck. They simply want success, they want wealth, but
on Allah's terms. They don't understand that Allah's terms haven't
produced fabulous success, that their own cultures haven't produced it,
all they know is that the West is magical and they're not. If they kill
us all, they think, the spells will fall into their lap, and they can
use them to magically produce success.

>
> The only thing that can be done with that kind of mindset is to speed them
> to martyrdom. There is no negotiating, bribery or appeasement that will be
> accepted.

They're quite willing to become martyrs on their own. Problem is,
they'll take the rest of us with them. They view this jihad as lasting
centuries, meaning that they will always have willing martyrs, and all
they have to do is wait for the natural course of empire to happen, and
wait us out. Once the West rots away, they can take over and impose
their will. Like the Germanic barbarians, they want Rome's success
without Romans. And like the Germans, they'll find that success can't be
taken by force. But by then, they'll have destroyed the civilization
that brought success, and the world will be back in the dark ages. I
suppose that will make them happy, but it will be a pyrrhic victory,
since all they'll have acheived is destruction, not creation, of
success.

I was surprised to hear them on my car radio last week after the car had been serviced. The battery had been disconnected so the radio came up on 530kHz (or else the mechanic had tuned it there) and, voila!, CRI. It's a multicultural station in Toronto and rebroadcasts some CRI programming - I had not known that before.

There is a sneaking suspicion that this stuff isn't really written by soldiers in Iraq at all, but by Bushies in Washington. Scores of small town newspapers have recieved identical letters, supposedly from different soldiers, all touting the same "successes" in Iraq. Stuff like this circulates on the net, shamelessly pushing the "patriotic" line that we must not waver or fail, that we must "finish the job", that we must be resolute. They sound a LOT like Bush's speech a week or two ago. Wanna bet they're written by the same speechwriters? Problem is, the people increasingly aren't buying it. They see that Iraq is unwinnable, that we're fighting the Muslims on THEIR terms, not ours, that Bush's obsession with Saddam having done 9-11 has created, not extinguished, a haven for terrorists. It's been shown that while the WTC was still burning, and all the terror experts were pointing to Osama, Bush kept insisting that Saddam really did it. He insisted that Saddam did it from the day of 9-11 on, and nobody, not even his own father, could sway him. Now he's insisting that we stay there for an open ended commitment, that's recently been estimated at 12 years, and that we cannot fail. His blindness threatens to sink America.

I think this is true of most people. It's hard to find truly quiet reception anymore. Recently I visited family in West Central Kentucky. I was about a mile outside of a small town with a population of approximately 3000. I was all psyched up, thinking that it would be a super quiet spot for a little DXing. However, it seemed only marginally quieter than Brooklyn--at least during the week I spent there! It's just harder and harder to find quiet places.

I'd be psyched too at the prospect of trying out my gear in a rural area. I'm surprised you didn't get better results in KY as compared to Brooklyn. A few years back I took a Sony 7600g and 100' of wire with me on a trip to up state NY. I was amazed at how low the noise floor was in comparison to what I'm used to here in north NJ. Along with that, I was also astounded by the number of stars that I could see in the night sky.

I suspect that people further north of us had worse reception.

I had 640 KFI fading out on me so I noticed the poorer reception on AM
broadcast band also but Australia and New Zealand were OK later in the
evening.

I had some good reception here in Huntington Beach. .540kc was coming in good
with oldies music, Greece came in good around 0245 GMT on 7475, Ukraine was
on 7440 at around 0250 GMT and Japan was okay on 17825 at 2215 GMT.
Good Listening and DX!

That's true. Images, birdies, artifacts, intermodulation products --
it's all there.

The R-75 is dumpster fodder. Value? yep. Value for money? yep.
Absolutely a good value? Not even close.

You need to experience a truly good radio. See
http://www.sherweng.com for some guidelines.

For the category of SWBC listening and DXing, the satellit 800 is a far superior product, really there is no comparison

1) better sound
2) better selectivity in the stock versions
3) FAR better sync detector, even if it is a fixed version !

See if there are any Ham Radio operators in your area.They can advise you and help you decide on what sort of radio and related equipment (antennas and baluns and such like) and books and magazines to buy.There might be regular once a month meetings in your area or not far away you can go to too.There is a once a month Amateur Radio meeting on the third Thursday of each month in the city I live in.I am not a Ham Radio operator.Some other folks in this news group can offer more information about Ham Radio and some good websites to check out.

I am listening to a few eldery Ham Operators (Kenny and Ron) in my area on 146.760 MHz on my scanner radio.They are talking about Tropical Storm Emily and some sort of a problem with a Pinebelt Repeter,I notice there is some static on 146.760 MHz.What does that have to do with Shortwave Radio? When the weather gets bad around here,there are Ham Radio Operators talking about the weather and tornado spotters out and about with their Ham Radios.Those weather reporters we see and hear on tv and we hear on the news media on AM and FM radio have to report weather news according to how fed govt wants them to report the weather news.Either Popular Science or Popular Mechanics magazine had an article about that a year or so ago and a few months ago,I read an article about that in one of my computer magazines.The news media slants and twist and spins the news according to how fed govt orders them to do so and that also goes for the news media weather news.The best way to predict the weather is to buy a good Barometer and learn how to use it.

Thousands? While WRTVH lists quite a few tropical band stations, many are
inoperative. In the areas I work, Latin America, I suspect at least half are
no longer on the air or are even deleted.

Hundreds, maybe. Thousands? Unlikely.

I suppose (only guessing) if some folks are listening to their Shortwave radios with a computer card in the radios and connected to the internet,they can detect that,or listening to Shortwave radio on the internet with their computers or internet radios,they can detect that too.(I don't know if I am making any sense about that,probally not) Otherwise,how can they detect if folks are listening to Shortwave radio? In England,those folks over there have to pay a lot of money each year for a license to watch their tv sets.The license is for only one tv per household,extra tv sets do not have to be licensed.I will be durn if I will pay any taxes to listen to my radios! We are already being taxed half to death.

Where is the statistical study you read.

You seem to be long on unfounded opinion and short on fact. Here is
the conclusion to an extensive analysis of trends in ham license
statistics. The link is also below.

Average age of licensed Hams is approaching 60 years as these trends
in License Counts and Remaining Life continue. These trends lead me to
believe our hobby of Amateur Radio will suffer from severe problems
unless there is a major change in our ability to recruit, educate,
license and sustain activity of new young Hams.

See above for some facts and just listen to the guys on the bands.
The membership is getting older on average. Not a good sign of
vitality.

That is one of the ARRL's functions...to limit access to the bands by
requiring and adminstering a testing program. If you don't believe me
read their charter. The ARRL continues to support out-of-date tests
and do little to entice young blood into the hobby. The ARRL behaves
as though they were in the 1950's when every high school had a radio
club kids built crystal radios and the hobby didn't have to worry about
attracting members. Youngsters were clammoring at the gates to learn
code, take the test and get a license. Times have changed and the
young have other ways of talking with one another and otherwise finding
out about the world. In other words they are not knocking at the gate
manned by the ARRL gatekeeper. In fact they have no idea where the
gate is.

The fact is that morse code has been abandoned by virtually all
commercial and military users of the spectrum. It is a skill for which
there is no modern day use, other than for hams to talk slowly with one
another. From personal experience I know the military communications
pros tend to chuckle a bit when the discussion comes to hams and mars
activities on hf.

I remember when the H&W nets actually attracted traffic several years
back. One notable instance was covering the aftermath of a hurricane
and was jammed with hams walking over one-another transmitting in voice

and morse code all trying to talk with someone in the effected area. It was not a pretty thing to listen to...in-fact it was chaos and no information of any consequence could have been exchanged. My sense was that most of the hams were trying to score rather than pass traffic of concerned loved ones.

By making that statement you appear to be implying that no auditor or audited statement is to be trusted. Are you really saying that? That would be analagous to saying because there are a few bad hams on 3.8 mhz 14mhz that all hams are rude and undeserving of their license privileges.

Okay , but whenever I've needed equipment or *parts*
(microwave parts, for example), I have been and am able to get
them today. Can it be the examples you cited are inconsequential?

Yes, I was in MARS when they did away with morse traffic handling.

A "...skill for which there is no modern day use..." Another hyperbole.
You
haven't said one word about weak-signal communications. I could cite
example after example in situations in which morse can be copied and
the other modes cannot. There *is* a modern-day use for morse code.

What possible use can there be for morse code if nobody is using it.
Morse code has evolved from once being a key component of commercial
and military communications to a form of entertainment for hams and
nothing more. Hams use it in speed and low power contests to talk with
one another. It has no value outside that realm because none of the
people involved in emergency, rescue or military work have the
equipment, training or need to use it.
Morse code had an exalted place within radio, but it's time as a
practical mode of communication has long since passed. And to continue
to require morse proficiency as a test proves little more than how far
out of touch with the real world those in control of this hobby really
are.

Let me get this straight..... "Dumpster Fodder ???" Your getting carried
away....

Recommend a better radio that will have a PRACTICAL improvement over an R-75
without spending over $ 1,000.00 Please dont spit out specs that hardly
differ from that of the R-75 and are not statistically significant
PRACTICALLY speaking.

Tell me what radio NEW out of the box will give me a PRACTICAL improvement
on my R-75 for under $1,000.00 and I'll buy it this week. Remember, this is
for DX'ing. I dont want a boom box.

Michael

Personally, I wouldn't even have one around for use as a doorstop.

CNN is reporting that a shuttle window cover fell, and damaged some protective tiles near the tail. So launch may be delayed.

Sorry, don't have any current freqs though. There has been a ham station relaying shuttle/ground transmissions on 3860 LSB past years, but I don't know if it is still active.

Yes... I understand your reasoning here. In your case having an R-75 to
use as a doorstop would be redundant. You've already got you head to act in
that capacity. And, it is far better suited to the task.

Can you list the radios that fall in the $500-$1000 price range the
might be candidates for comparison? They would have to be generally
available within the US.

The radios in the list I'm asking for don't have to meet your "PRACTICAL
improvement" criteria.

What does "statistically significant PRACTICALLY speaking" mean?

craigm

To get out of a difficulty, one usually must go through it. Our country is now facing the most serious threat to its existence, as we know it, that we have faced in your lifetime and mine (which includes WWII!).

The deadly seriousness is greatly compounded by the fact that there are very few of us who think we can possibly lose this war and even fewer who realize what losing really means.

First, let's examine a few basics:

1. When did the threat to us start?

Many will say September 11th, 2001. The answer as far as the United States is concerned is 1979, 22 years prior to September 2001, with the following attacks on us:
Iran Embassy Hostages, 1979;
Beirut, Lebanon Embassy 1983;
Beirut, Lebanon Marine Barracks 1983;
Lockerbie, Scotland Pan-Am flight to New York 1988;
Dhahran, Saudi Arabia Kh! obar Towers Military complex 1996;
Nairobi, Kenya US Embassy 19 98;
Dares Salaam, Tanzania US Embassy 1998;
Pentagon 2001.

(Note that during the period from 1981 to 2001 there were 7,581 terrorist attacks worldwide).

2. Why were we attacked?

Envy of our position, our success, and our freedoms. The attacks happened during the administrations of Presidents Carter, Reagan, Bush 1, Clinton and Bush 2. We cannot fault either the Republicans or Democrats as there were no provocation's by any of the presidents or their immediate predecessors, Presidents Ford or Carter.

3. Who were the attackers?

In each case, the attacks on the US were carried out by Muslims.

4. What is the Muslim population of the World? 25%

5. Isn't the Muslim Religion peaceful?

Hopefully, but that is really not material. There is no doubt that the predominately Christian population of Germany was peaceful, but under the dictatorial leadership of Hitler (who was also Christian), that made no difference. You either went along with the administration or

you were eliminated. There were 5 to 6 million Christians killed by the Nazis for political reasons (including 7,000 Polish priests). (see http://www.nazis.testimony.co.uk/7-a.htm).

Thus, almost the same number of Christians were killed by the Nazis, as the 6 million holocaust Jews who were killed by them, and we seldom heard of anything other than the Jewish atrocities. Although Hitler kept the world focused on the Jews, he had no hesitancy about killing anyone who got in his way of exterminating the Jews or of taking over the world - German, Christian or any others.

Same with the Muslim terrorists. They focus the world on the US, but kill all in the way -- their own people or the Spanish, French or anyone else. The point here ! is that just like the peaceful Germans were of no protection to anyone from the Nazis, no matter how many peaceful Muslims there may be, they are no protection for us from the terrorist Muslim leaders and what they are fanatically bent on doing -- by their own pronouncements -- killing all of us "infidels." I don't blame the peaceful Muslims. What would you do if the choice was shut up or die?

6. So who are we at war with?

There is no way we can honestly respond that it is anyone other than the Muslim terrorists. Trying to be politically correct and avoid verbalizing this conclusion can well be fatal. There is no way to win if you don't clearly recognize and articulate who you are fighting.

So with that background, now to the two major questions:

1. Can we lose this war?

2. What does losing really mean?

If we are to win, we must clearly answer these two pivotal questions.

We can definitely lose this war, and as anomalous as it may sound, the major reason we can lose is that! so many of us simply do not fathom the answer to the second question - What does losing mean?

It would appear that a great many of us think that losing the war means hanging our heads, bringing the troops home and going on about our business, like post Vietnam. This is as far from the truth as one can get. What losing really means is:

We would no longer be the premier country in the world. The attacks will not subside, but rather will steadily increase. Remember, they want us dead, not just quiet. If they had just wanted us quiet, they would not have produced an increasing series of attacks against us, over the past 18 years. The plan was clearly, for terrorist to attack us, until we were neutered and submissive to them.

We would of course have no future support from other nations, for fear of reprisals and for the reason that they would see, we are impotent

and cannot help them.

They will pick off the other non-Muslim nations, one at a! time. It will be increasingly easier for them. They already hold Spain hostage. It doesn't matter whether it was right or wrong for Spain to withdraw its troops from Iraq. Spain did it because the Muslim terrorists bombed their train and told them to withdraw the troops. Anything else they want Spain to do will be done. Spain is finished.

The next will probably be France. Our one hope on France is that they might see the light and realize that if we don't win, they are finished too, in that they can't resist the Muslim terrorists without us. However, it may already be too late for France. France is already 20% Muslim and fading fast!

If we lose the war, our production, income, exports and way of life will all vanish as we know it. After losing, who would trade or deal with us, if they were threatened by the Muslims.

If we can't stop the Muslims, how could anyone else?

The Muslims fully know what is riding on this war, and therefore are completely committed to winning, at any cost. We better know! it too and be likewise committed to winning at any cost.

Why do I go on at such lengths about the results of losing? Simple. Until we recognize the costs of losing, we cannot unite and really put 100% of our thoughts and efforts into winning. And it is going to take that 100% effort to win.

So, how can we lose the war?

Again, the answer is simple. We can lose the war by "imploding." That is, defeating ourselves by refusing to recognize the enemy and their purpose, and really digging in and lending full support to the war effort. If we are united, there is no way that we can lose. If we continue to be divided, there is no way that we can win!

Let me give you a few examples of how we simply don't comprehend the life and death seriousness of this situation.

President Bush selects Norman Mineta as Secretary of Transportation.

Although all of the terrorist attacks were committed by Muslim men between 17 and 40 years of age, Secretary Mineta refuses to allow profiling. Does that sound like we are taking this thing seriously? This is war! For the duration, we are going to have to give up some of the civil rights we have become accustomed to. We had better be prepared to lose some of our civil rights temporarily or we will most certainly lose all of them permanently.

And don't worry that it is a slippery slope. We gave up plenty of civil rights during WWII, and immediately restored them after the victory and in fact added many more since then.

Do I blame President Bush or President Clinton before him?

No, I blame us for blithely assuming we can maintain all of our Political Correctness, and all of our civil rights during this conflict and have a clean, lawful, honorable war. None of those words apply to war. Get them out of your head.

Some have gone so far in their criticism of the war and/or the Administration that it almost seems they would literally like to see us lose. I hasten to add that this isn't because they are disloyal. It is because they just don't recognize what losing means. Nevertheless, that conduct gives the impression to the enemy that we are divided and weakening. It concerns our friends, and it does great damage to our cause.

Of more recent vintage, the uproar fueled by the politicians and media regarding the treatment of some prisoners of war, perhaps exemplifies best what I am saying.

We have recently had an issue, involving the treatment of a few Muslim prisoners of war, by a small group of our military police.

These are the type prisoners who just a few months ago were throwing their own people off buildings, cutting off their hands, cutting out their tongues and otherwise murdering their own people just for disagreeing with Saddam Hussein.

And just a few years ago these same type prisoners chemically killed 400,000 of their own people for the same reason. They are also the same type enemy fighters, who recently were burning Americans, and dragging their charred corpses through the streets of Iraq.

And still more recently, the same type enemy that was and is providing videos to all news sources internationally, of the beheading of American prisoners they held.

Compare this with some of our press and politicians, who for several days have thought and talked about nothing else but the "humiliating" of some Muslim prisoners -- not burning them, not dragging their charred corpses through the streets, not beheading them, but "humiliating" them.

Can this be for real?

The politicians and pundits have even talked of impeachment of the Secretary of Defense.

If this doesn't show the complete lack of comprehension and understanding of the seriousness of the enemy we are fighting, the life and death struggle we are in and the disastrous results of losing this war, nothing can.

To bring our country to a virtual political standstill over this prisoner issue makes us look like Nero playing his fiddle as Rome! burned -- totally oblivious to what is going on in the real world.

Neither we, nor any other country, can survive this internal strife.

Again I say, this does not mean that some of our politicians or media people are disloyal. It simply means that they are absolutely oblivious to the magnitude, of the situation we are in and into which the Muslim terrorists have been pushing us, for many years.

Remember, the Muslim terrorists stated goal is to kill all infidels! That translates into all non-Muslims -- not just in the United States, but throughout the world.

We are the last bastion of defense.

We have been criticized for many years as being 'arrogant.' That charge is valid in at least one respect. We are arrogant in that we believe that we are so good, powerful and smart, that we can win the hearts and minds of all those who attack us, and that with both hands tied behind our back, we can defeat anything bad in the world!

We can't!

If we don't recognize this, our nation as we know it will not survive, and no other free country in the World will survive if we are defeated.

And finally, name any Muslim countries throughout the world that allow freedom of speech, freedom of thought, freedom of religion, freedom of the press, equal rights for anyone -- let alone everyone, equal status or any status for women, or that have been productive in one single way that contributes to the good of the world.

This has been a long way of saying that we must be united on this war or we will be equated in the history books to the self-inflicted fall of the Roman Empire. If, that is, the Muslim leaders will allow history books to be written or read.

If we don't win this war right now, keep a close eye on how the Muslims take over France in the next 5 years or less. They will continue to increase the Muslim population of France and continue to encroach little by little, on the established French traditions. The French will be fighting among themselves, over what should or should not be done, which will continue to weaken them and keep them from any united resolve. Doesn't that sound eerily familiar?

Democracies don't have their freedoms taken away from them by some external military force. Instead, they give their freedoms away, politically correct piece by politically correct piece.

And they are giving those freedoms away to those who have shown, worldwide, that they abhor freedom and will not apply it to you or even to themselves, once they are in power.

They have universally shown that when they have taken over, they then start brutally killing each other over who will be the few who control the masses. Will we ever stop hearing from the politically correct, about the "peaceful Muslims"?

I close on a hopeful note, by repeating what I said above. If we are united, there is no way that we can lose. I hope now after the election, the factions in our country will begin to focus on the critical situation we are in, and will unite to save our country. It is your future we are talking about! Do whatever you can to preserve it.

After reading the above, we all must do this not only for ourselves, but our children, our grandchildren, our country and the world.

Whether Democrat or Republican, conservative or liberal and that includes the Politicians and media of our country and the free world!

Other then a few computer controlled alternatives, there are no other choices other then the R-75. That's the larger point.

> The radios in the list I'm asking for don't have to meet your "PRACTICAL
> improvement" criteria.
>
> What does "statistically significant PRACTICALLY speaking" mean?
>
> craigm

Meaning exactly as stated. Here is an example:

The Drake R-8 was tested to have a sensitivity of 0.25 and 0.18 with the pre amp on.

The R-75 was tested to have a sensitivy of 0.5 and .02 with the first level pre amp on

The Kenwood R-5000 was tested to have a sensitivity of .02

The NRD-525 was tested to have a sensitivity of .02

OK, what do you say ???? You can see what receiver gets the better test numbers here. Think it matters PRACTICALLY speaking given what typical noise floors are ??? Would you feel it was worth it to spend a few thousand dollars to get that extra decimal ??? This applies equally to other values.

Do you understand my point yet ????

Michael

On the West Coast KTNN, which is run by the Navajo tribe, will dominate
660 khz, usually heard just below KFI Los Angeles on 640. In Ohio a
Cuban station (CMQ, I think) will be heard on 640, and WFAN is usually
on 660. If WDLT is drowning out WFAN in Ohio, then they're out of spec.

Always remember, news = entertainment. That's why TV weather has flashy
weather maps and live shots of the city. My local TV weather always
shows a flag waving around to show you how fast the wind is blowing. Yet
another contribution to the dumbing down of America.

I believe that the original idea was to provide internet to areas not
serviced by phone and cable lines. The thing is, most of the western
world is serviced by phone, cable, cell phone, or satellite (the
internet can be had via satellite) so there really is no need for BPL.
And the areas that aren't (Africa, Middle East, poorer parts of Asia)
have people too poor to afford computers, although there has been some
success with aid agencies giving a village chieftain a PC and a
satellite dish so his people can access the internet. So BPL simply has

no place except for power grid management, and it's not too successful
there either.

(snipped for brevity)

If the 'West' stopped killing them and stealing their land and resources, you may be surprised at how quickly their attitudes would change. The Israeli atrocities in Palestine alone have guaranteed another generation of enemies. I think that in the Arabian eye, generally speaking, both the US and Israel are one and the same entity. There are now three generations of displaced people living in refugee camps. Over four million human beings forced off their farms and out of their villages. It's obscene.

Israel now has over fifty percent of it's population recently immigrated from Russia. The US taxpayer supports that whole artificially made mess.

Remember the web page asking the question:

"If ninety percent of the NeoCons were Palestinian, would Iraq have been invaded?"

We ALL know the answer to that one. Why is it so hard for the US government to finally do the RIGHT thing and stop acting like the bullies of the world?

Israeli settlers threw a molotov coctail at this kid.

Well, not exactly. Even the Taliban had shortwave (Voice of Sharia)-it was the only way to reach the far flung populace in rugged Afghanistan. That said, all they broadcast were prayers. Even the Saudis have a regular SW service, although they too broadcast prayers (15170 after 0300 can be heard in the US under good conditions with prayer and Quran readings). The Taliban banned TV because it was an image, and all images are against Islam according to the terrorists.

And yet they seem to find television and images quite alright as long as
they are furthering their jihad..

We're getting circles run around us in Iraq. We can't seem to make any
headway for the simple reason that they have unlimited numbers of people
willing to die and we don't.

> So, how can we lose the war?
>

> Again, the answer is simple. We can lose the war by "imploding." That

This sort of mindless "support everything Bush does no matter what" idea
is actually part of the problem. The give and take of democracy is
actually healthy, and it is why America is strong while Saudi Arabia
lives under the constant threat of revolution. The Saudi royals don't
allow any criticism, any sharing of prosperity, any rights at all, and
that is why they are so fragile. Criticism is a natural part of the self
governance of a free people, and banning criticism is equivalent to
outlawing freedom. If we do that, then we may win, but we will become so
weakened in the process of winning that even the slightest hint of
trouble will be enough to topple us. If that happens, then we'll really
lose.

Read that MSNBC article that David posted the link to. The terrorists
view this war as lasting for CENTURIES. This will not be won in 5 years
or 50 years. They plan to fight for 500 years at least. Are you willing
to give up your rights for the rest of your life, and for the rest of
the lives of your descendants for the next few hundred years?

Criticism does NOT mean weak, disloyal, or unsteady. It means strong and
healthy. Americans seem to have forgotten this. The right to question
where we are going, how we are fighting, keeps us strong. Otherwise our
leaders become like the dictator who doesn't realize how badly his army
is getting thrashed because he only hears good news from people who know
that telling him the truth will cause them to lose their heads. The
truth will truly set you free.

> but throughout the world.

So let them. Why do you want to live, anyway? They WILL win, and we WILL
die. All they have to do is wait us out, wait for the natural course of
empire to take its course, and once we have decayed like Rome, the
barbarians will break down the gates and conquer. It is pure arrogance
to think that we can hold out for five centuries against an enemy which
has been working towards an Islamic Earth for 1400 years.
>

> or any status for women, or that have been productive in one single way
> that contributes to the good of the world.

Yet the same people who say that freedom of speech and of the press make us great are quick to demand that we give up those rights in favor of "unity". Giving up the right to criticize only creates the illusion of unity. Tough on the outside, weak on the inside. The Taliban hacked up anybody who dared to criticize the regime. They forced people to behave in a pure Islamic way. To the outside, Taliban Afghanistan looked strong and unyielding. But once the Taliban fled, men shaved their beards and women shed their burqas. Today, mosques are empty at prayer time. The Taliban regime was in reality a reed that was blown away at the slightest hint of wind. If we give up the right to speak and think freely, we will become the same way. As the war drags on, generations will be born who will never have known anything except enforced "unity". Eventually the dissatisfaction will boil over, the society will collapse under its weight, and the barbarians will help themselves.

> This has been a long way of saying that we must be united on this war

Isn't that what you are asking us to do by giving up our rights in order to present a false front of unity, not for a few years but for a few hundred years?

> And they are giving those freedoms away to those who have shown,

There are rumours out there that the zionists killed off Lawrence of Arabia.
They didn't want Islamic types seen in anything resembling a good light.

http://www.telstudies.org/research/tel_and_zionism.htm

Churchill was a staunch supported of zionism and wasn't averse to helping out at every turn. It appears he died owing the Rothschilds of London over sixty thousand Pounds, so his connections were far from 'arm's length.

Under $ 1,000 but still more then the R-75. I think they sell for about $ 650.00. I looked into this radio not too long ago. Obviously, there is a lack of interface features. Worse then that, ECSS tuning for DX'ing could be a bit problematic due to it's 20 Hz minumum tuning incraments. That will absolutely NOT due. Not even for $300.00 brand new. I'd take the R-75 over this ANY day of the week even if the Palstar wasn't more expensive.

this is not a troll this is FACT

what it takes you half an hour to do with an R75, I can do in 5 seconds with a satellit 800, and it would probably still be better. I have owned several R75's with different configurations so I KNOW what I am talking about. and the fixed SYNC on the 75 is still pathetic compared to the 800. FACT

NOW I DID SAY SWBC, the 800 is a bit handicapped for code/RTTY etc where really tight selectivity is needed.

but for AM mode, the 800 is unbeatable, this is FACT

Then I think posing the challenge you expressed is a poor way to make a point. There are radios, in my opinion, that I find to be an improvement over the R75. Specifically, the IC-746Pro and g313i. However, they fall outside your dollar range. At any specific price point the number of radios to choose from is limited. The nature of the challenge you put forth guaranteed there would be no way to meet it to your satisfaction.

Only one of those is possibly in current production.

You can see what receiver gets the better test
> numbers here.

All those that are out of production. You selected the list for comparison, so, from that list I see the R75 had the poorest number. Is that your point?

Think it matters PRACTICALLY speaking given what typical
> noise floors are ???

That's a limitation on the user's antenna and location and not the
radio. For some, the difference is significant.

Would you feel it was worth it to spend a few thousand
> dollars to get that extra decimal ???

Well, you've skipped over the $1000 to $2000 range which covers several
radios. Also, that extra cost goes into more than just improving one
number. That makes your question pointless.

This applies equally to other values.
>
> Do you understand my point yet ????
>

Yes, for you the R75 appears to work well. Others have found they prefer
other radios for a variety of reasons. If you've found a radio that
you like, listen to it. If others find that the radio you like doesn't
work well for them live with that fact. Neither person is necessarily
right or wrong, they have each found what works for them.

>thanks jack

Tune 10780.0 (Cape radio/DOD Cape) 24 hours before launch time, you'll hear the frequencies for the range safety net, SRB recovery net, etc. announced then. If you miss that, it's pretty much hit and miss as to finding where those HF nets are operating, but you can check the WUN web pages for a list of where such comms have been in the past. Either that, or check with the guys in the IRC channels that do realtime monitoring while on IRC and see if anyone knows the freqs that are in use at the time, chances are they either will or are looking for them and will soon find 'em.

(much bullshit snipped)

I have a FAR BETTER idea.

How about if the whole World tells both the Jews (Israel)
and the Islamics (Arab States) to go do something with
each other...? Really! I am serious.

It would be FAR BETTER for the
whole of the plannet if both of these completely inbred races
and their KOOKY DINGBAT RELIGION(S) and shrines
were to dissappear from off the Face of the Planet.

I say let the Jews and the Arabs FINISH EACH OTHER'S
respective race(s) off with thermonuclear weapons. Let the
whole of the Middle east be reduced to a slag heap of molten
radioactive glass and burnt blackened bones and skulls littering
the resulting moonscape like aftermath.....

The World will be a far better place if/with
both of these kooks were all GONE for
GOOD. Let them exerminate each other ONCE AND FOR ALL.

Then we can throw a party afterwards and all live happily ever after
knowing these kooks and their 2000+ year old Booer War is finally over..

DPM,
.
An 'alternate theory' as to "WHY" the IC-R75 Receiver is now...
once again available.
.
The possibility exists that Icom look around at their Parts Inventory
for the IC-R75 Receiver's post production parts support and decided
that that they had sufficient Parts 'on-hand' for another Production
Run of IC-R75 Receivers. The immediate (short-term) 'value' of the
"Parts" was a Greater ROI then maintaining the Inventory over a
number of years.

Not only have you made a mistake once, you made it twice. I told
you morse code is used in weak-signal communications. You said
it is a "...skill for which there is no modern day use...it has no value..."
I have shown there is a modern-day use. It is hard to come up with a
superlative
to describe the gravity of such an error. Not only are you wrong,
you have committed an error in pure logic in a construct
known as a catagorical syllogism. To commit such an error *twice*
casts *extreme* doubt on your entire, lengthy diatribe. To continue
a conversation with an individual with an "intellect" who commits
such an error is absolutely pointless.

Well, other than reading their website or using their books to pass an exam, I
know little about them. But it seems they run the show, and are very powerful.
Sometimes, they are better off having 2 of these type organizations. But one is
better than none.

I doubt that the ARRL will piss off the folks that it reaches out to.
Sadly it will probably continue to bore those potential new members.
The ARRL may (and should) piss off the complacent members who cling to
the idea that out of date license tests should continue to be required
because the old-timers had to take them.

You can believe that all you want. I owned an R75 for years. When I
was selling it at a hamfest, Bob Sherwood came by and I offered it to
him, and he just laughed.

I'll say it again: It *is* value for the money, but it is *not* an
absolute value.

For me, the issue that is important is front-end overload. There are
several flamethrowers that put millivolts worth of signal on my
antennas. I don't have problems with close-in dynamic range... no one
should really have problems with sensitivity on HF.

The R75 was nothing but images below 10 MHz without both preamps off
and the attenuator on.

Again, I said that it is good value for the money. I know -- I had
one for quite a long time.
>

I use the R8500. It has a front-end like a tank. "Specs?" The
'8500s close-in dynamic range is abysmal. Yet I've found it to be an
amazingly useful radio. The '75 just couldn't pull anything out of
all the crap internally generated below 10 MHz here, because my
antennas happen to be in the way of the local flame-throwers.

Hmmm. Statistically significant here means nothing. "Significant?"
Well, he doesn't know, but I'll take a shot at it...

Sensitivity is overrated.

Dynamic range is important.

Ultimate rejection is underrated, unfortunately, and is the most
important figure for my situation. It is also where the R75 falls
short.

Right now, there aren't any radios to discuss because the tabletop
market has been swept clean.

No crazier than saying the R75 is the ultimate radio without having
exercised some other options.

Had Drake been manufacturing the Sat 800, er, SW-8, still, it would be
a respectible radio, still.

Hmmm,,,, thats odd as I have a combo AM - FM radio station almost
literally in my back yard. The stations antennas are maybe 750-800'
from my antenna and I have never had any image problems at all. I'm sure
there is a birdie or 2 somewhere throughout the bands but I have never
noticed any of those either. I listen to ute's and amateur 99% of the time
and find the R 75 does very well for this. (I do use a seperate speaker
as the internal one sucks) but that is my biggest complaint.

Remote access was sure part of the original BPL hype, if not the original idea. It seems to me radiation losses and susceptibility to interference would go up with distance so I'm wondering if a home which is too far out for DSL would remain a good candidate for BPL.

>The thing is, most of the western
> world is serviced by phone, cable, cell phone, or satellite (the
> internet can be had via satellite) so there really is no need for BPL.

I doubt if there was ever any need for BPL. We've been stringing wire in the US since the Samuel Morse days, and we're good at it. Running some coax along the same poles which carry the power could be done, if the consumers want to pay for it. Those are the restrictions the cable TV industry has to deal with, and they seem to be doing OK. Small rural towns were the first parts of the US to be cabled up in order to get big city TV from a master antenna.

> And the areas that aren't (Africa, Middle East, poorer parts of Asia)

> there either.
>
>

Well, let's not forget vending machines. I remember predictions from the early days of the internet which held that most vending machines would soon be connected so the operators would be able to monitor and supply their machines more efficently. Surprisingly, most operators seem to be too damn cheap to put their machines on dial up and are still doing business the old fashioned way. Maybe BPL will finally herald the new dawn in vending machine efficiency.

I don't know if BPL is better for power grid managment than whatever power companies are using now. The more local idea of turning power on and off for individual apartments and homes from a central location seems to be a bit of a stretch, at least in the short run. A utility would have the task of replacing maybe hundreds of thousands of manual power controls with

remote control BPL switches. Cutting and establishing the power manually, as needed, sure seems like a better use of the company's labor and capital. And, the utility would have big PR problems if more than a small few of those fancy BPL relays fail after a lightning storm.

I'd like to know just why IBM thinks BPL might be a winner after all the recent failures.

HF rebroadcast freqs for Shuttle Launch Control

I am getting a lot of Emails from people wanting to know HF freqs that might be rebroadcasting the Shuttle Launch Control comms that I am hearing here. I do not know if Goddard ARC will be rebroadcasting the comms for STS-114, but since it is so important a launch (Return to Flight), my guess would be that they might broadcast.

Here are the freqs that they used for the Shuttle Launch Control comms in the past:

3.860 USB
7.185 USB
14.295 USB
21.395 USB
28.650 USB

It's always been like that. The only time it's not
like that is when one party has utterly stomped the
other at the ballots. The only difference is that
the yelling and screaming is getting coarser and
is more on the center stage.

3840. Slovak Radio to end foreign language broadcasting on shortwave by the end of July

Newsgroup: rec.radio.shortwave
Date: 2005-07-13 17:35:47 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3jl1nkFqhueaU1@individual.net>
Source record: 27440

12 July 2005

Bratislava: Slovak Radio (SRo) will lay off 84 employees and will end foreign language broadcasting on shortwave by the end of July. The SRo management wants to cut costs and make up for revenue shortfalls in this way. The number of the public broadcaster's employees will go down to an all-time low of 825. The SRo management has also halted all investment projects.

The SRo's shortwave foreign language broadcasting will be replaced by broadcasting [sic] through the Internet. "Since we estimate this year's revenue shortfall from subscribers' fees at 400m korunas [Slovak crowns] and from the state budget at 130m korunas, these measures have become unavoidable," said SRo Director-General Jaroslav Reznik.

The radio wants to save some 130m korunas by the end of the year in this way, of which more than 16m korunas will be savings in wage costs, after the deduction of severance pay. "The loss of 150m korunas that we posted in the first six months of this year therefore should not markedly increase," Reznik said. Source: Sme, Bratislava, in Slovak 12 Jul 05 p 2

Honestly, I don't have an IC-R75 to compare with my
Sat 800, but if I were going for purely DX machine,
I'd seriously look into an R-5000, R8/R8A/R8B or
an NRD-525/NRD-535. Nothing against the R75, but
if the sync is that bad as is believed, I'd rather go for
either a better one (Drake's) or none at all (JRC or
Kenwood).

That said, I stick with my Sat 800 for listening right
now because it's price point is pretty darn good for
what you get. That and I can't really spend any more
money on my shack right now, too.

The sync on R-75 works. And works quite well, when it's applied
according to directions. It is, however more than a bit fiddly. And
most users have neither the patience, nor the inclination to apply
it according to instructions.

I had no problems with the sync in the R-75's I've used. But it
was more work to get them to do what I expected than other designs.

Not everything is going to be a Drake design. Still, this one is
less than as user friendly as current technology permits.

Hi,

Anyone know of any simple Applet that might take the
place of the clock (in XP) that resides on the bottom bar of the screen that
would display GMT (and possibly regular time also) ?

Thanks,
Bob

I take it that it's a bit more than simply push the button,
then?? What has to be done to make the sync work, Peter??

> Not everything is going to be a Drake design. Still, this one is
> less than as user friendly as current technology permits.

I'm just disappointed that Sony has never followed
up on their own sync with a model geared more toward
serious DXing than the 2010. The 2010 was a trendsetter,
but it was also the high water mark of Sony SW portables,
too.

Yes, it's more than simply pushing a button. It's been a number
of years since I've used one, but as I recall, there were some gain
adjustments, and filter selections. Once dialed in, sync worked fine.

There are some specific parameters that need to be addressed when
using sync on RX-350, too. But if you're attentive to the details,
it, too, works as promised. The best sync I've used to date is on
AR-7030+. Dials itself in and stays locked through the deepest
fades. Second is sync on HF-150.

I have a Drake. SW-2. Sync is fine, but more prone to losing lock
than the AOR.

For the record, I'm not as passionate about synchronous detection
as some here. It's a tool, nothing more. It doesn't cure cancer,
ingrown toenails, or receding hairlines. And it's not worth starting
a religion over. It's a tool for reception of radio signals. AM

Stereo uses it, too. In fact, that's where the Drake sync detector
came from.

I use it rarely. Mostly I rely on a good set of filters, a
comprehensive ground, and an antenna that can suck the pubic hairs
from between your teeth.

Nothing replaces good basics.

Bible already prophesies this... it's called Armageddon. And from what I've
read, we don't want it to happen if we can at all avoid it, since most of
life on Earth will be gone when it's over.

Fragile lucky crying again? It's ok little lucky, the part of that post
i refer to is to letting israel and the arab states fight it out among
themselves. no more western involvement. so unless you live in israel or
an arab state, you can stop your whining k? good boy :)

Technology to replace fossil fuels already exists. It's just a matter of
getting off the dime and producing/using it. Right now, the oil barons are
in no big rush to allow use of a technology that can put them out of
business (a short-sighted view, to say the least.. were it me, I would be
hedgeing my bet by buying into alternative technologies against the day when
the bottom drops out of the oil market).

Lose weight.

--

Real intelligent answer. Do you have any comprehension of what would happen
if you woke up tomorrow and oil was at 100$ a barrel?? Inside of 30 days the US's
economy would be all but in shambles. The stock market would tank, peoples retirements,
especially 401K's would be 50-75% gone. The entire transportation industry would
just about collapse. Gasoline, if you could get it, would be 5-10$s a gallon. Wholesale
prices for everything would skyrocket. Massive unemployment. Yea you'd lose weight
alright, you wouldnt be able to feed your family. Real smart answer, get a brain, learn
some economics.

Yea alternative power sources exist, but they are in their infancy and they are
not economically viable at this time. Oil is still king when it comes to cost/power
ratio is concerned. Wind power is intermittent at best, sunpower is ok but it takes
acres and acres of land to produce large quanities of power. Fuel cells are very
efficient and they work with 2 of the earths most abundant elements (oxygen +
hydrogen) but they are very expensive. Not many people have 100,000$ to
buy a fuel celled auto. So for right now we are stuck with nuclear and fossil
fuels to run our economy. My bet is some day fuel cells will be king, because
of the endless supply of the elements to power them. Remember when
scientific calculators that could do squares, and square roots, and such were
over 100$ and now you can buy them for 14.95$. A hydrogen powered
auto engine is another alternative but to travel long distances you would need
either very high pressure tank for storage or a smaller tank for liqufied
hydrogen, neither is a really great idea, accidents could be rather spectacular
(remember the Hindenburg). So for now as an earlier poster said we're stuck.

I think it's too late to say "get out of Iraq and stop propping up the Saudi royals and they'll go away". The original point of Al Qaeda was to overthrow the Saudi monarchy. But it's metastasized into a much bigger mission of "kill anybody and everybody who doesn't believe exactly as we do". In that case, they'll never run out of people to kill, and if they do, 95% of the world will be dead and the jihadin will be forced into a hunter gatherer lifestyle.

It would have been easy for the Arab governments to eradicate the
refugee problem by resettling the refugees in their own lands. Jordan is
95% Palestinian. Instead, the corrupt Arab rulers kept the Palestinians
as refugees living in ghettoes in the hope that they would form the
nucleus of a warrior class that would push Israel into the sea. And they
have become warriors, only they're committed to killing not just
Israelis but the entire world, including the Arab sheiks who created the
permanent refugee problem in the first place. Talk about unintended
consequences.

Yeah, it started out as the Arabs trying to kick the Jews out, but both
sides have their fair share of atrocities now.

Well I beg to differ, since acquiring a Sony 7600 and later the R75 -
both with sync detection - I've not had a single ingrown toenail !!
Unfortunately I bought them after the hairline receded.

> I use it rarely. Mostly I rely on a good set of filters, a
>comprehensive ground, and an antenna that can suck the pubic hairs
>from between your teeth.
>
> Nothing replaces good basics.
Agreed! I seldom use synch either - perhaps if I had a radio with
the famed Sherwood synch detector or a Drake I would find it more
useful. In any case, yes it is just another tool. It reminds me of
the saying "if your only tool is a hammer - all of your problems look
like nails." There are more tools than synch and it pays to gain
familiarity with what they do and when to apply them.

As to R-75 status - I think they're still around due to the existing
stock supply not because of Icom deciding to continue production.
That opinion, and $2.00 US will get you a cup of coffee at Starbucks.

Howard

If we can contain the damage to the Middle East, it might not be too
bad. The only real downside in that case would be that most of the
world's oil supply would be inaccessible. But if we can have them hit
the cities, and keep the oil workers in underground shelters to protect
them from the radiation, then that wouldn't be too bad. The only rule is
that the US or Russia isn't allowed to intervene. Israel has nukes, and
the Arabs have chemical weapons, so it would be a nice complete kill.

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

BZZZZZZZ!!! Sorry! (read on.....)

From: "What About the Hydrogen Economy?"

(By present technology) A single hydrogen fuel cell requires
20 grams of platinum. If the cells are mass produced
it may be possible to get the platinum requirement down to 10
grams per cell. The world has 7.7 billion grams of proven platinum reserves.
There are approximately 700 million internal combustion engines on the road.
Ten grams of platinum per fuel cell x 700 million fuel cells = 7 billion
grams
of platinum, or practically every gram of platinum in the earth.

Unfortunately, as a recent article in EV World points out, the average fuel
cell lasts only 200 hours. Two hundred hours translates into just 12,000
miles,
or about one year's worth of driving at 60 miles per hour. This means all
700
million fuel cells (with 10 grams of platinum in each one) would have to be
replaced every single year.

Thus replacing the 700 million oil-powered vehicles on the road with fuel
cell-powered vehicles, for only 1 year, would require us to mine every
single ounce of platinum currently in the earth and divert all of it for
fuel cell
construction only.

Doing so is absolutely impossible as platinum is astonishingly energy
intensive (expensive) to mine, is already in short supply, and is
indispensable to
thousands of crucial industrial processes.

What will we do, when less than 6 months into the "Hydrogen Economy," we hit
Peak Platinum? Perhaps Michael Moore will produce a movie documenting the
connection between the President's family and foreign platinum companies
while following the plight of a mother whose son died in the latest platinum
war?
;)

[.....the Hindenberg aside, muse over this a tad, quoting the above
article:]

If the hydrogen economy was anything other than a total red herring, such issues
would eventually arise as 80 percent of the world's proven platinum reserves are
located in that bastion of geopolitical stability, South Africa.

Even if an economically affordable and scalable alternative to platinum is immediately located and mined in absolutely massive quantities, the ability of
hydrogen to replace even a small portion of our oil consumption is still handicapped by several fundamental limitations:

1. Hydrogen is the smallest element known to man. This makes it virtually impossible to store in the massive quantities and to transport across the incredibly long distances required by our vast global transportation networks. In her February 2005 article entitled,

"Hydrogen Economy: Energy and Economic Blackhole,"
Alice Friedemann writes:

'Hydrogen is the Houdini 9escape artist) of elements. As soon as you've gotten it into a container, it wants to get out, and since it's the lightest of all gases, it takes a lot of effort to keep it from escaping. Storage devices need a complex set of seals, gaskets, and valves. Liquid hydrogen tanks for vehicles boil off at 3-4% per day'

2. A hydrogen economy would require massive retrofitting of our entire global transportation and fuel distribution networks. At a million dollars per car, it would cost $350,000,000,000,000 to replace half of our current automotive fleet (700 million cars) with hydrogen fuel cell powered cars.

That doesn't even account for replacing a significant fraction of our oil-powered airplanes or boats with fuel cells.

The numbers don't get any prettier if we scrap the fuel cells and go with straight hydrogen. According to a recent article in Nature, entitled "Hydrogen Economy Looks Out of Reach:"

Converting every vehicle in the United States to hydrogen power would demand so much electricity that the country would need enough wind turbines to cover half of California or 1,000 extra nuclear power stations.

Unfortunately, even if we managed to get this ridiculously high number of wind turbines or nuclear power plants built, we would still need to build the hydrogen powered cars, in

addition to a hydrogen distribution network that would be mind-boggingly expensive. The construction of a hydrogen pipeline network comparable to our current natural gas pipeline network, for instance, would cost 200 trillion dollars. That's twenty times the size of the US GDP in the year 2002.

How such capital intensive endeavors will be accomplished in the midst of massive energy shortages is anybody's guess;

3. As mentioned previously, solar, wind, or nuclear energy can be used to "crack" hydrogen from water via a process known as electrolysis. The electrolysis process is a simple one, but unfortunately *it consumes more energy than it produces*. This has nothing to do with the costs and everything to do with the immutable laws of thermodynamics.

Again, Alice Friedemann weighs in:

'The laws of physics mean the hydrogen economy will always be an energy sink. Hydrogen's properties require you to spend more energy to do the following than you get out of it later: overcome waters' hydrogen-oxygen bond, to move heavy cars, to prevent leaks and brittle metals, to transport hydrogen to the destination. It doesn't matter if all of the problems are solved, or how much money is spent. You will use more energy to create, store, and transport hydrogen than you will ever get out of it.'

Even if these problems are ignored or assumed away, you are still faced with jaw-dropping costs of a renewable derived hydrogen economy. In addition to the 200 trillion dollar pipeline network that would be necessary to move the hydrogen around, we would need to deploy about 40 trillion dollars of solar panels. If the hydrogen was derived from wind (which is usually more efficient than solar) the cost might be lowered considerably, but that's not saying much when you are dealing with numbers as large as $40 trillion. (--> that's 3x the anticipated Year 2030 budget requirement of Social Security and Medicare COMBINED!!!!)

Even if the costs of these projects are cut in half, that makes little difference over the course of a generation, as our economy doubles in size approximately every 25-30 years. In other words, by the time we will have made any real headway in constructing a "hydrogen economy", the problem will have already compounded itself.

HERE IS THE KEY POINT: If the "hydrogen economy" is such
a hoax, why then do we hear so much about it?

The answer is simple when you "follow the money"
and ask "who benefits?" (Hint: GM, Shell, Conoco et al.)

3873. Interesting BBC report on the psychology of suicide bombing

Newsgroup: rec.radio.shortwave
Date: 2005-07-14 02:50:31 UTC
From: running dogg <run@ning.dog>
Message-ID: <42d5d3f4$1_1@spool9-west.superfeed.net>
Source record: 27312

Has anybody heard The World Today? On 9825 at 0200 they had a report on the psychology of suicide bombing. Basically, the expert said that the bombers are disaffected young people fed up with the current social and religious constructs under which they live, and subsceptible to utopian dreams. When the promise of 72 virgins in Paradise for eternity is compared to what they see around them on the earthly plane, Paradise starts looking pretty damn good. They also mentioned that in Iraq different factions of Muslims are going into the mosques of the opposing faction and blowing themselves up.

What all this adds up to is that no place is safe, and everybody between the ages of 13 and 25 is a potential terrorist. It's the same impulse that gave birth to the 60s counterculture, only much more damaging. What we're talking about is a threat not only to Western Civilization but to the basic building blocks upon which human interaction is built. If every teenager in the world decides that suicide bombing is better than earthly living, and the goal is simply to kill as many people as possible wherever and whenever they may be found, then the human race is probably doomed.

We each go out into the world trusting that the people around us are not out to blow us up. Imagine if children start killing their parents, if bombs go off on school buses, if life becomes one long litany of death and destruction that can come from anybody, anywhere, anytime. Human society would tear itself apart trying to secure itself or trying to grab the scraps of existence before they too are blown up. The killing would continue until it ran out of people to kill, like a virulent virus that doesn't die until it has exhausted its host population. By the time the virus of suicide bombing ran out of participants, humanity would be no more.

There has been lots of talk on this newsgroup about the threat we face, and the costs of losing. Well, here it is: we face the threat of having the building blocks of human existence come unraveled, and the result would be that the human race would cease to exist. We still don't know if there are other sentient species on other planets, and we may never find out. If humanity is truly alone, then its extinction would be the greatest loss that the universe has known in 20 billion years.

> money on my shack right now, too.
>

Well, I can't argue with the money issue. Fortunately, all the radios
I use now are *very* listenable -- the R8500 is very un-ICOM-like in
that regard, and a good ear for music is a nuisance when dealing with
a DSP that introduces monkey chatter. (The R75's doesn't, but the
'545 is supposed to have monkey chatter problems and the Timewave
external is downright painful if given a signal with audio above 3
kHz.)

Current radios I have are R8500x2, WR G303i, Ten-Tex RX340, Collins
R392.

Past radios have been R75, FRG-100, FRG-7, HF-150.

I have had the 75 and 800 with the same antenna on my radio bench and I could find signals that were so under attack that the 75 was unable to do anything with it. notch, PBT, whatever you wanted to engage, it was not enough, 1/2 hour or a week later, the R75 didn't have enough weaponry to get the job done.
I push the sync button on the 800, select the sideband I want and 3 seconds later, I had a very listenable signal. that is the repeat story of the 800 vs 75.

for SWBC, there is NO contest. the sync on the 800 is undefeatable in 99% of the challenges it takes on.......

the R75 is full of great OLD technology and it seems that many people are caught up in that and can't move on.....

this is not a troll post, this is fact. I have had THREE 75's of different configurations and always the same, great OLD technology can't take on Drake design

Side band selectable sync is a powerful tool apparently not understood
by many people due to inexperience.

>
>

I believe this "energy shortage" is just another conspiracy tactic that will be used to limit the freedom of people and countries and control them. By controlling someone's personal travel and keeping them where you want, you truly have control over them. And just how do you do that? You can't just take away their vehicles. You take away the *main component, the fuel.

Fuel is just another form of monetary value which equals freedom and power. Since most people have some money, you have to supercede money with something else. See, even if you have the money, if there is no fuel to buy or it's priced too high, money is useless for your travel freedom. So have all you want.
It will "purchase" less and less freedom as time goes by.

It's just another master scheme to control this planet and people in it. We are being transformed into slaves of the state without knowing it. We will have to sit home, or in move in limited circles, having more time on our hands to be controlled by the media and what's beamed our way.

I believe there are no real political parties anymore. The Repubs and Dems are both out for the same common goal now and that is control of people, their thoughts and freedoms and one world government. It is nothing but a ruise. Our elections mean nothing. The same group of people in control will always be in control.

Sorry to say but we're in heap of shit but can't smell it yet.

Lucky

I've never used one. It's easy enough to ignore any 'offending' posters. I really get a kick out of those who claim at two or three times to have killfiled someone for eternity and then continue to reply to them as if nothing has happened.

Truthful people who killfile usually do it quietly, without making a grand public announcement. That would be the proper course of things.

By Elizabeth Millard
With a recent investment by Google and a new initiative announced by IBM, broadband-over-power-line technology has leapt back into the spotlight. Have companies finally found a way to profit from the promise of broadband in every home with an electrical outlet?
ADVERTISEMENT

Using a low-cost adapter, BPL (broadband over power line) customers can get high-speed Internet service using the wiring that already exists in their homes or offices.

The technology has been touted as having a number of benefits for users as well as for utility companies. Not only can it deliver broadband to areas that lack DSL or cable service, advocates say, but it also can boost power service reliability and track outage information more accurately by using network tracking capability.

Although utilities and technology companies have been tinkering with using power lines to carry data for nearly 20 years, within the past five years there has been increasing interest in commercialization.

Those who are betting that BPL's time has come include some technology heavyweights, which could ensure a level of success. On July 7, BPL provider Current Communications Group noted that it had received major investment from Google Inc., the Hearst Corp. and Goldman Sachs.

Current Communications went after the high-profile investors because the company believes that many of the technical hurdles have been addressed, driving BPL toward a more cost-effective model, said Kevin Kushman, vice president of corporate development at Current.

Hi there Mike!

I need to pick up an 800. I read so much about them in here and elsewhere that it's piqued my interest in one. But I've been saving that next radio buy for the Eton E1 if it ever gets released. Also, if the rig is any good, prices on the 800 should drop and I can get both :)

I've tried to come up with a reason with the strange behavior not only for the terrorists but for crimes commited in our societies lately. I thought about environmental polutants or the many microwaves flying thru the air has had some affect on the human brain itself altering it's normal thinking process.

Then I thought it might be that mans brain has reached an evolutionary process where it can no longer "cope" with the data of it's own existance. Religion, politics, war, death, the internet, pornography, our search for pleasure, greed, all have jaded and desensitized us in all apsects of life.

Existence now is not what it was just 30 years ago. It seems our brains can't solve our new problems or deal with them. People are literally "going insane"

it is a redesigned SW-8, not exactly the same, but almost.

I actually prefer the 800 because of the better speaker and tone controls.
also it is easier to use because of its size

All time software I've tried have a bug introduced by Windows time
routines.
They does not consider daylight savings.
Standart offset from GMT at my location is +3 and daylight savings
offset is +4, but all such software always show +3 even when DST active.

A 'book', huh? Is it, or is it not a book? A cartoon book? A coloring book? Perhaps it is just a sheet of paper with crayon scribblings on it.

My name is not jack (or even Jack).

...but that has nothing to do with shortwave.

I have all three books.

...but that has nothing to do with shortwave.

I do not like Hillary or Bill. I think they both are sociopaths, megalomaniacs and completely uncaring about anyone but themselves.

...but that has nothing to do with shortwave.

Until you learn that typing like a tinfoil-hatted conspiracy theorist makes you look like a five year old, I cannot really take anything you say seriously.

...but that has nothing to do with shortwave.

The crap that got posted was treated as if it were new or relevent.

...but it has nothing to do with shortwave.

Just because Barbara Olsen wrote it, doesn't mean it is true. She made her living by making attacks on democrats and liberals. Whether what she said had merit or not was irrelevent to her.

...but that has nothing to do with shortwave.

SO WHY DO YOU KEEP BRINGING THIS CRAP HERE?

Can't you and Rickets and you other morons go somewhere and beat each other to a pulp, so the five or so of us left can talk about shortwave?

Please... go away... go play in the streets... but just go.

Morse code sent by a pro is a delight to the trained ear. Those who
have mastered it should be congratulated for taking the time to learn a
method of communicating that goes back to the origins of the radio
hobby.

There can be no denying that all signiicant communications users have
moved beyond morse code and its inherent limitations. All military
services, commercial users and rescue services have abandonded morse
code in favor of faster and more reliable modes of communicating. For
hams this change means that if they wish to participate in emergency

communications they will have to use some other mode. If they try to communicate with FEMA, the Coast Guard, the Hurricane Hunters, local police and fire departments, etc., etc., using morse code they will not be understood and it is very likely they will not even be heard.

If hams want to communicate with one another under the weak signal conditions you describe, that is fine and they should be encouraged to enjoy their sport. But hams (and you) have to understand that nobody other than a few hams will be listening.

3909. Kaito DE-1106 : Any Information on Radio ?

Wasn't the SW-2's sync the older style, found on the
R8 and R8A?? I've always found the Sat 800's/SW8/R8B's
sync to be pretty good. Not a cure-all by any stretch, but
pretty good.

The monkey chatter issue is why I'm not interested
in a 545. I used to lust after an IC-R71A, but it's sound
isn't the greatest, and I keep telling myself that an
R-5000 is just as good.

Degen has sold the design and copyright to another company according to an article on the website below. So the 1106 design may be sold by someone but not under the Degen logo and poissibly not labeled as a 1106 model. The article on the wesite below is silent about whether Degen will produce the 1106 design for the unnamed company. My guess is that the unnamed company is Eton since they are the remaining marketer of portables of any size.

Really, what's on shortwave these days? I am in Boston and I own a
Sony ICF-5900W which I used to listen to the BBC back in the 1980s.
Now I can get the BBC on the Internet or one of the local NPR FM
stations. I have not used it in a long while and would like to dust it
off and do something useful with it.

Hi

I have about 10 radios. For $425, the R75 is my best rig. I have no problem with images here in Miami. There are many Hams down here and lots of the time the bands are terrible. But, with my R75, I can clean the signal up very well and enjoy the conversations. I can't do this with my other rigs. Here they. They are not all very good but I started out as a novice.

1] Kenwood 5000
2] Lowe HF-150
3] JVC NRD 525
4] Yaesu FRG-7
5] TenTec 320-D for DRM
6] Yaesu FRG-7700
7] Nasa Target HF3
8] Kenwood QR-666 {really the R300}
9] Degen 1103
10] Icom R75

I would say the next best rig is the HF-150 then the 5000 and 525 are about equal with the 525 giving you a few more options. If I mean business I use the R75. All I know is that I bought a brand NEW radio with **DSP and **dual PBT plus easy computer control for $425. Just being able to mix and match filters is superb. The built in 2 level pre-amp works great.

How in the freaken world can you argue this point? How? Point me to a decent receiver for $425. Please, show me so I can buy it.

Lucky

Isn't the 2nd pre-amp really meant for use up in the 50-54 MHz range?

> How in the freaken world can you argue this point?

It's an ICOM... so it's very easy to argue the point!

<< All military services, commercial users and rescue services have abandonded morse code in favor of faster and more reliable modes of communicating >>

I'm assuming you're talking USoA and the other advanced nations as CW continues to hold sway in the third world. INSCOM is still cranking out 05H's for intercept operating, albeit at a far reduced rate. But CW lives where cost of equipment, etc prohibits getting into satcomm's and other faster, mostly better forms of commo...

Various large, AM broadcasters like BBC, Radio Netherlands, Radio Vilnius, Radio Ukraine International, etc. You could also monitor marine communcitions, aeronautical communications, amateur radio operators, coast guard, military, MARS nets, and so on and so on. Take your pick!

Solar Activity Forecast: Solar activity is expected to continue at moderate to high levels for one more day as Region 786 rotates around the west limb. Activity is expected to return to low to very low levels on 15 and 16 July.

Geophysical Activity Forecast: The geomagnetic field is expected to range from quiet to major storm levels. The CMEs observed yesterday and today are expected to produce active to minor storm levels on 15 and 16 July. Isolated major storm periods are possible at high latitudes. The greater than 10 Mev protons will likely pass the 10 pfu alert threshold early on 14 July.

From: John Kasupski <kc2hmz@wzrd.com>
Message-ID: <6u0dd1t5gqc6r2grjg7jbeogqi5qcikaav@4ax.com>
Source record: 27480

On Wed, 13 Jul 2005 21:40:15 GMT, KA6UUP <ka6uup@pacbell.net> wrote:

>All frequencies in Upper side band (USB) unless noted
>

(Note: I have snipped quite a bit from the list, but while there is some good stuff listed there are also a lot of obsolete frequencies listed. You may want to update your information. I don't mean that as a putdown, merely constructive advice.

Off the top of my head, for example...

>10.493 FEMA Nationwide primary

This is the FEMA NECN Nationwide FEMA-2U/L channel, you might hear either USB or LSB here.

>2.691 ??????
>4.426 USCG calling

Ships transmit on 4134.0 - 4426.0 is for the shore stations (it's a maritime duplex channel).

>5.692????

Now 5693.0 and it's an Aero Off Route freq that is used by USCG/USN, and also by the RAF's Strike Command Integrated Communications System (STCICS)

>8.780 ?????

Probably refers to 8779, a marine duplex calling channel. This is the freq for the shore stations, the ships transmit on 8255.

>13.927 Hurricane watch net M.A.R.S

This is the ACB primary for USAF MARS. Lots of phone patch traffic can be heard here.

>11.207 ?????

Now 11208.0 - this is another Aero Off Route frequency, and is used by the US Navy Worldwide and the RAF STCICS.

>10.780 Primary NASA booster recovery ships(CAPE RADIO)

Well, not exactly. 10780 is the primary for Cape Radio/DOD Cape, the SRB recovery ships will be heard here but the SRB recovery net usually operates on a separate frequency.

>6.712 USAF Global HF
>6.739 USAF Global HF
>8.968 This frequency has been removed from GHFS service?
>8.992 USAF GHFS
>13.200 USAF GHFS
>17.976 Removed from GHFS service?

What used to be called the GHFS is now called the HF-GCS.

6712 is also used by the Canadian military, and by the French AF's Circus network.

8968 and 17976 have indeed been removed from service. There has been some use of 8968 by the NIGHTWATCH Net assets logged since then, I'm not sure about 17976. 6739, 8992, and 13200 are still quite valid HF-GCS frequencies.

>8.764 USCG WEATHER

Tim Rulon posted the updates to the USCG weather broadcasts to this newsgroup back in April, so I won't duplicate it here. 8764 is also the shore stations freq for the USCG duplex calling frequency where the ships transmit on 8240.

>11.330 OCEANIC RADIO(Caribbean Sea)

Aero Caribbean (CAR-B) MWARA frequency.

>5.545 ???????

May refer to 5544.0 which is an aero LDOC freq.

>8.844 ?????

May refer to 8843.0 which is an aero Central East Pacific (CEP-1/2) MWARA freq.

>5.616 Oceanic radio (North Atlantic)

Aero North Atlantic (NAT-B) MWARA freq.

>8.846 ????

Aero Caribbean (CAR-B) MWARA freq.

>8.980 USAF

This Aero Off Route freq is used by USCG and was formerly used by the Navy's Tactical Support Center facilities before they started closing them. Also a NATO AWACS Discrete.

>6.577 CARRIBEAN Oceanic

Aero Caribbean (CAR-A) MWARA freq.

Hope this helps.

> receiver for $425. Please, show me so I can buy it.

Not to state the obvious, but he did concede that, for the money,
R-75 is a value. What he's saying, what I've said, and what has been
repeated here over the last few years, is that R-75 is not an
absolute value. For $425, yes, it's a good deal. But as an absolute
value, it's like most ICOM's (of which I've owned several and loved
every one of them): It's potential is not realized until it's been
modified. No one is saying that it's a bad radio. No one is saying
that it's not worth having, and that it's not a strong player, and
to reiterate for those in Rio Linda, FOR THE MONEY, it's a good value.

It's just not all it can be.

As much as I loved my R-71, I was very much looking forward to R-75's release. And was ready to close a deal with Universal as soon as it was available. But after playing with one for the better part of a day, I was less than impressed. And went in another direction. A direction I've been very pleased with. In fact, I've not bought a new radio since.

I liken ICOM's to cars at the drag strip. Do you know why there are so many Fords and Chevy's are used as racing platforms? ï¿½nd you don't see so many Lincoln's and Cadillacs? Not because the Fords and Chevy's are superior, but because they're a good buy for the money. For an economical outlay, you can buy a platform, that when modified to taste becomes precisely the car you want. Exactly built and tuned to the application you've chosen for it. A Lincoln would be a better platform. Sturdier, more finely tuned suspension. But with fewer mods available, and at dramatically higher cost.

I"ve seen Lincoln's at the race track. And I watched one mop up a Taurus in the quarter mile, but at 20 times the outlay for a dragstrip car.

ICOMs are solidly built, and decent performers. Like entry level domestic cars, their design has great potential for performance. But production cost shortcuts and economies produce a product that could be far more than it is. Requiring modification to extract the performance built into the design. When you're finished, add up price of the radio, the cost of the mods, shipping, old battery and recappable tires, and you've got a radio that's actually more expensive than it would have been had they not cut the production corners in the first place.

But then, at least, the absolute value of the radio would be established.

There's nothing wrong with you loving your R-75. And as Eric has said more than once, it IS a good value for the money.

It's just that as it comes out of the box, it's potential is not realized. And for many users, that's a deterrent to ownership.

Well yes, since most participants on this board come from the U.S. or
one of the other "advanced" countries.

Thank you for clearly articulating what I could not. That's what I
get for posting when in a crummy mood, I suppose.

Unfortunately, the only fix for *my* issue with the R75 would have
been a seriously good manual preselector. Since the CI-V computer
info could have continuously updated external gear, one could conceive
of an electronic tracking preselctor, but at a cost several times that
of the '75 itself.

...kinda like starting with a Cessna 150 with the goal of making a
supersonic jet from the airframe...

This same statement could have been used about CB radio in 1980. By then, the 70s CB craze was dead as disco, and sunspots made local CB use impossible. So most people left the CB world and went elsewhere.

But CB didn't go anywhere. Vacationers and truckers still depend heavily on CB to find out about ever-changing road conditions, closings, safety concerns, and speed traps. Even in this age of GPS and cell phones, nothing serves the same function as good old channel 19.

And yes, we also need to know Smokey shooting radar every People who drive cross is still there, and truckers and cross-country

Acid would definitely help...

You take ethanol in massive quatities?

Bohemian Grove Fact Sheet

What is the Bohemian Grove? The Bohemian Grove is a 2700 acre redwood forest, located in Monte Rio, CA. It contains accommodation for 2000 people to "camp" in luxury. It is owned by the Bohemian Club.

What is the Bohemian Club? The Bohemian Club is a private. all male club, which is headquartered in the Bohemian building in San Francisco. It was formed in 1872 by men who sought shelter from the frontier culture (or lack of culture).

Who are the present members? The Club has evolved into an association of rich and powerful men, mostly of this country (there are similar organizations in other countries). Some artists are allowed to join (often at reduced rates), because of their social status and entertainment value. The membership list has included every Republican U.S. president (as well as some Democrats) since 1923, many cabinet officials, and director; & CEO's of large corporations, including major financial institutions.

What industries are represented among the members? Major military contractors, oil companies, banks (including the Federal Reserve), utilities (including nuclear power), and national media (broadcast and print) have high-ranking officials as club members or guests. Many members are, or have been, on the board of directors of several of

these corporations. You should note that most of the above industries depend heavily on a relationship with government for their profitability.

The members stay in different camps at the Grove, which have varying status levels. Members & frequent guests of the most prestigious camp (Mandalay) include: Henry Kissinger, George Shultz, S. D. Bechtel, Jr., Thomas Watson Jr. (IBM), Phillip Hawley (B of A), William Casey (CIA). and Ralph Bailey (Dupont). George Bush resides in a less prestigious camp (Hillbillies) with A. W. Clausen (World Bank), Walter Cronkite, and William F. Buckley.

What activities take place at the grove? The grove is the site of a two week retreat every July (as well as other smaller get-togethers throughout the year). At these retreats, the members commune with nature in a truly original way. They drink heavily from morning through the night, bask in their freedom to urinate on the redwoods, and perform pagan rituals (including the "Cremation of Care", in which the members wearing red-hooded robes, cremate a coffin effigy of "Dull Care" at the base of a 40 foot owl altar). Some (20%) engage in homosexual activity (but few of them support gay rights or AIDS research). They watch (and participate in) plays and comedy shows in which women are portrayed by male actors. Although women are not allowed in the Grove, members often leave at night to enjoy the company of the many prostitutes who come from around the world for this event. Is any of this hard to believe? Employees of the Grove have said that no verbal description can accurately portray the bizarre behavior of the Grove's inhabitants.

Besides this type of merriment. the annual gathering serves as an informational clearing house for the elite. The most powerful men in the country do their "networking" here, despite the Grove's motto "weaving spiders come not here" (don't do business in the Grove). At these gatherings men representing the government, military-industrial, and financial sectors meet and make major policy decisions. The Manhattan project, which produced the first atomic bombs, was conceived at the Grove in 1942. Other decisions made at the Grove include who our presidential candidates will be. There are speeches, known as "Lakeside Talks", wherein high-ranking officials disseminate information which is not available to the public-at-large.

What are the topics of discussion at the Lakeside Talks?

What's not right about this? When powerful people work together, they become even more powerful. The Grove membership is wealthy, and becoming more so, while the middle class is steadily becoming poorer. This close-knit group determines whether prices rise or fall (by their control of the banking system, money supply, and markets), and they make money whichever way markets fluctuate. They determine what our rights are and which laws have effect, by appointing judges. They decide who our highest officials shall be by consensus among themselves, and then selling candidates to us via the media which they

own. Important issues and facts are omitted from discussion in the press, or slanted to suit their goals, but they are discussed frankly at the Grove. Is there true democracy when so much power is concentrated in so few hands? Is there any real difference between the public and private sectors when cabinet members come from the boardrooms of large corporations? Is the spending of billions on weapons, which are by consensus no longer needed, really the will of the people? Or is it the will of General Electric, General Dynamics, and the other weapons contractors represented at the Grove?

What can I do to make a difference? Educate yourself about the Grove and it's inhabitants, and the true nature of the power structure in the world. Then educate your friends. Since most major newspapers and broadcast stations are owned by "insiders", be wary of everything you hear in the press. If you can, participate in protest activities during the July retreat.

How do I get more information about the Grove? Send a note to: Bohemian Grove Action Network, P.O. Box 296, Occidental CA 95465. A $5 donation to cover printing and mailing costs is requested.

bush is really a liberal and he and his crooked cohorts are in the process of handing over America to the un globalist,new world order.(how many times did his daddy bush say new world order in his speeches? about 34 times,I think.(look at our open Borders) He is in many ways no better than the klintoons,perhaps in some ways,even worse.There are cars available that run on compressed air pressure.Do a search for,The Air Car.I used to get their regular email newsletters about the air cars.I have an old Popular Science magazine here which dates back to the 1960's or 1970's and the magazine has an article about a guy who built his own home made air car.He used some old high pressure snorkle tanks for the compressed air tanks for his home made air car.Of course,it does take energy,either electric or gas or diesel engines,power to create compressed air.I bought an old Radio Shack Realist TRC-207 40 channel transceiver for $2.00 and an old CB radio microphone for $1.00 at the Goodwill thrift store yesterday afternoon.I am heading back over there again right now.I never know what kind of goodies I will find over there.

China, Russia issue joint statement on new world order

China and Russia here Friday issued a joint statement on a new world order in the 21st century, setting forth their common stand on major international issues, such as UN reforms, globalization, North-South cooperation, and world economy and trade.

The statement was signed by Russian President Vladimir Putin and visiting Chinese President Hu Jintao after their talks.

During their talks, the two leaders discussed ways to further enhance the strategic and cooperative partnership between China and Russia, and exchanged views on major regional and international issues.

The joint statement said the two countries are determined to strengthen their strategic coordination in international affairs and promote peace, stability and prosperity of the world.

UN REFORMS

The joint statement says that UN reforms should be aimed at strengthening the world body's leading role in international affairs, improving its efficiency and increasing its potential for dealing with new challenges and threats.

UN reforms should be based on consensus through consultations, and should fully embody the common interests of the vast number of member countries.

The United Nations is the world's most comprehensive, representative and authoritative organization, and both its role and function are irreplaceable, said the joint statement on a new world order in the 21st century.

The United Nations should play a leading role in global affairs and be the core for establishing and executing basic norms of international law, the statement added.

The statement calls for UN peacekeeping operations to be carried out in accordance with the tenets and principles of the UN charter.

Resolutions of the UN Security Council must be strictly abided by. Cooperation between the UN on the one hand and regional and subregional organizations on the other should be developed, according to the joint statement.

The joint statement also calls on the world body to play a bigger role in the study of global economic and development problems.

MULTILATERALISM

The joint statement says that countries must be allowed to decide autonomously on their internal affairs while international issues should be solved through dialogue and consultations on the basis of multilateralism.

The international community should completely renounce the mentality of confrontation and alliance; there should be no pursuit of monopoly or domination of world affairs; and countries of the world should not be divided into a leading camp and a subordinate camp, said the joint statement.

Every country must be assured of the right to choose its own path of development that fits its national realities, the right to participate in international affairs as an equal, and the right to development on an equal footing, it says.

Differences and disputes must be solved through peaceful means rather than through unilateralism or coercion. There should be no use or threatened use of force, says the joint statement.

Only on the basis of universally recognized tenents and norms of international law, and under an impartial and rational world order, can problems facing mankind be solved, says the document.

All countries should strictly observe the principles of mutual respect for each other's sovereignty and territorial integrity, mutual non-aggression, non-interference in each other's internal affairs, equality and mutual benefit, and peaceful coexistence, it says.

The joint statement believes that the world is undergoing a historic change. The establishment of a new world order will be a long and complicated process, it says.

The central task of mankind in the 21st century is to safeguard peace, stability and security for the whole mankind, and to realize full-scale coordinated development on the basis of equality, maintenance of sovereignty, mutual respect, mutual benefit and ensurance of good development prospects for future generations.

Hu arrived here on Thursday for a state visit. He will also visit Kazakhstan and Britain, where he will attend the G8 plus five summit.

NEW SECURITY FRAMEWORK

The joint statement calls on the international community to establish a new security framework on the basis of mutual trust, mutual benefit, equality and cooperation.

The framework should have the universally recognized norms of international relations as its political foundation, and mutually beneficial cooperation and common prosperity as its economic foundation, says the joint statement.

The establishment of this framework should be based on the equal security rights of all nations while dialogue, consultation and negotiation on an equal footing should be the means for settling conflicts and maintaining peace, the joint statement says.

China and Russia support efforts to maintain global strategic stability, and the multilateral process of establishing legal systems on arms control, disarmament and non-proliferation, it says.

The two sides will work together to put the Comprehensive Nuclear Test Ban Treaty into effect as soon as possible and to push for the universality and effectiveness of the Treaty on the Non-Proliferation of Nuclear Weapons (INT), the Biological Weapons Convention and the Convention on the Banning of Chemical Weapons (CWC).

They also call for the peaceful use of outer space, and voice opposition to weapons deployment and arm races in outer space. They push for relevant international legislation to this end.

The two leaders believe that in face of new threats and challenges, further effective measures should be taken to prevent the proliferation of weapons of mass destruction (WMDs) as well as their carriers and relevant materials, according to the joint statement.

The joint statement says the two sides have decided to cooperate more closely in related international organizations and forums and expand cooperation with other like-minded countries. The issue of proliferation of WMDs should be resolved through political, diplomatic and international cooperation within the framework of international law, says the joint statement.

The two sides think that a UN-led global system should be set up to deal with new threats and challenges on the basis of the UN Charter and international law, it says.

The joint statement says regional integration is an important character in the development of the current international situation.

Open, non-exclusive regional organizations are playing a positive role in shaping a new world order.

The two countries appeal for the promotion of further economic cooperation in regional integration and for the establishment of security cooperation mechanisms.

They also voice support for regional organizations to set up ties with each other and produce an atmosphere of mutual trust and cooperation, the joint statement says.

ATTENTION TO GAP OF DISPARITY

All countries should have an equal opportunity to enjoy the profits of globalization in such fields as economy, society, science, technology, information and culture, said the joint statement, calling for mutually beneficial cooperation and common development.

Developed countries and developing ones should make efforts to eliminate discrimination in economic relations, and narrow the gap of disparity between the rich and the poor, says the joint statement.

The international community should formulate a comprehensive economic and trade regime acceptable to all, through negotiation on an equal footing. Pressure and sanctions should not be used to force a country into unilaterally making economic concessions, it says.

It also calls for respect for the history and traditions of those countries with diverse ethnic groups and their efforts to maintain national unity. Attempts to encourage secession or incite ethnic hatred within a country should not be accepted.

Diversity in cultures and civilizations should not be the source of conflict, but rather resources from which all countries can learn.

Different historic backgrounds, cultures, social and political systems, values and modes of development should not be used as pretext for interference in other countries' internal affairs, says the document.

The Chinese president arrived in Moscow Thursday for a state visit, the first leg of his three-nation tour, which will also take him to Kazakhstan and the United Kingdom.

In Kazakhstan, he will attend a Shanghai Cooperation Organization summit. Then he will fly to Scotland for an informal meeting between leaders of the Group of Eight industrialized countries and five developing nations -- China, India, Brazil, South Africa and Mexico.

Hi Peter

I'm happy with my R75 just the way it is. I added a pair of 2.8's {9mhz and 455Khz} and the voice synthesizer, the remote option and that's all I need right now. I can use other options besides the sync on the R75 to reduce fading. I always find a way to get the signal in nicely.

I get good strong signals here in Florida so the sync is not a big issue for me. I also don't overload. If I ever do, I again use the great options on the R75 to fix it. All in all besides being a fantastic value for the money, it's a great communications receiver.

The SSB and ECSS on it can't be beat, period. It's SUPERB in this regard. I love that radio. For BCB, the 2.8 does it for me.

Lucky

When I made my choice, I played with each for more than a day, and did all the reading I could on each model. What I found was that it's a virtual dead heat between the two. Performance differences are insignificant, and pretty evenly balanced between the two. Build quality is nearly the same. Ergonomics for each are uneven. I preferred the keypad of R-71 over R-5000 for it's more standard layout, but the buttons on R-71 are smaller. In the dark, one is as easy/difficult to use as the other. Audio quality is better on the Kenwood. Prices on the used market are about the same. And both have excellent pedigrees. The RAM battery on the ICOM is only as much of an issue as you want to make it. Mine was still the original battery, and the guy who bought mine is still using it as it was sold to him. The WillCo board eliminates that issue entirely. But diligent preventative attention prevents calamatous loss of function, too.

Now, looking at each as an aging example of a long discontinued product, R-71 seems to have fewer debilitating foibles than R-5000. Seems to be more readily repaired or reconditioned than R-5000. R-5000 displays are tough to come by, encoders are starting to fail. Then again, the DC-DC converters for R-71's display are starting to need rebuilding, the trimmers on the PLL unit need to be replaced, and the heat around the regulator is causing solder joints to fail.

What it really comes down to is how much you want to screw with one, today, and which one you personally prefer. In real world usage, what you would gain by switching from one to the other is a matter of taste, not hard performance.

We really do need one of maryanne kehoe's Boobie Show threads on women who breastfeed on airplanes to liven up this place. We're way overdue for one of those. Or mothers changing their babies' diapers in the next seat during the meal.

Perhaps she could repost her trip report of her meeting with ellen at PHL, where she "let" ellen smoke.

>- When will JF Mezei emerge from his basement hole?

Too bad he ran off The Bill Mattocks. Those threads on how to find the cancer corner/smoking section at each airport were hilarious.

>- Things just aren't the same since Canadian Pacific ceased operations

Yup, that's what finally pushed JF over the edge.

Btw, I hear Max Ward sightings are up this year.

Because Bush Sr. decided to take the poor 'tard boy under his wing and try to
teach him a thing or two.

There is still hope, not only for Clinton, but for you as well. I realize that
you are probably a harder 'nut' to crack though.

Keep trying, and take those meds.

I get your point Eric. I was trying to go beyond the arguement of it just being a good value by showing how good it is regardless of price. It's good radio period, not just for the "value".

Hi Howard

I found that using the sync manually works better then the auto mode.

So true. You can have the best rig money can buy but without good basics,
the money is wasted on it. I think many people leave the hobby or not get
into it because they didn't set things up right. I know I did a lot of
things wrong when I first started out and I'm still learning.

About two months ago I read an article on the internet about a guy in North Carolina (I think the article said North Carolina) who built a small model car that runs on Hydrogen for a science class experiment at his school.I don't remember the details of the car but apparently,it never needs refueling.I did email the article to myself at one of my six webtv addresses,it would take me long time to find it again if the link still works.I have an old Mechanix Illustrated magazine around here somewhere that dates back to the 1950's or 1960's.An article in the magazine is about the U.S.Army asked a Seargent to make a 1957 Chevrolet pickup truck run on Ammonia gas.The Seargent experimented with an old small one cylinder horizontal shaft lawnmower style gasoline engine.Then he mounted a tank of Ammonia gas (about the size of a tank of oxygen or acetylene used for cutting and welding) in the bed of the pickup truck and a few other things he had put together.He started up the pickup truck's engine on gasoline and let the engine warm up and then he switched over to the tank of Ammonia gas and the engine kept on running.The article also says the Army could use small portable Nuclear generator plants and park them by lakes,rivers,whatever,and cheaply produce all of the Ammonia fuel they need to run their trucks and cars.I once worked at a Bordens icecream plant that used to be here in Jackson.The plant used Ammonia for keeping the icecream cold during production.I can tell y'all that Ammonia is powerfull stuff,you really had to keep an eye on those gages too.

Based on your info I will not look further.
I am interested in the KA-1102 due to fact it has double conversion
and can receive SSB. Do you have any knowledge of this radio really
being able to hear intelligent SSB voice ? Or is it like using the BFO
on my old SX-16 to get SSB and retune every few seconds to keep it
clear ?
I am looking for a very small SW set with SSB capability and better
sensitivity and selectivity- nothing big like my Sony 2010.

Thanks

The only solution to that is to get The Congress to pass the bill
that has been introduced three times to assert Federal jurisdiction
and get the problem solved (I deal with CC&R cases professionally).
The Congress stonewalls it every time. Few if any states even want
to touch it.

What do YOU suggest?

Not only is the R-75 a good value for dollar, it is a good absolute value as well. Price aside, it is a good radio period. It is well built, sensitive,

selective, has a good user interface, is adequate for program listening, can be very good for program listening with simple mods, and it is outstanding for utility and DX'ing. For me, it doesn't make the sense god gave a mule to malign the R-75 because after market mods can improve the performance of the audio definition and the function of the sync detector should you decide to do so. The R-5000 is a great radio and it doesn't even have a sync detector. The NRD 545 is a good radio and to my ear, even through an external speaker the audio is hollow and tinny for any radio, let alone one with a price tag that is so high.

I have used the R-75, R-5000, R8, R8b and have some time on an NRD-545. Going by actual usage, I can honestly say that NONE of those radios are "WONDER RADIOS" in comparison with the others. The all have their strengths, but none of them will work miracles in comparison to other ones. They are all capable radios. Of all of those radios, the one that I'd prefer to have for DX'ing and or utility would be the R-75. For program listening, I'd take the R8b. The audio quality itself is not all that much better then my Kiwa modified R-75, but the ssb selectable AM sync on the R8b can be a marvel for cutting out not just fade distortion but cutting out QRM completely from a signal above or below. I can also do the same thing with QRM using my Sony 7600gr too !!!!

So.... Those are facts. The R-75 is a good performer in some categories and an OUTSTANDING performer in most others. How can you say it is not an absolute value ???

In reading posts from people that COMPULSIVELY malign the R-75 and obsess over the perceived AM sync deficiency ad nausium, it seems like it is the self justification of a person who spent way more money then the R-75 costs on their rig.

You dont have to blow $2,000 out of your A$$ to get an absolute value. I'm not bashing anyone who buys an expensive radio. Not at all !!! This is a hobby and radios are fun to have and use. The more the merrier !!!

I am respectfully pointing out that the R-75 is a very good radio. It also happens to cost a lot less then other radios that dont outperform it.

Michael

I use the 1102 for SSB and it works quite well with little or no drift. It uses a true variable BFO that is adjustable to USB or LSB with the side thumbwheel. IT does have a quirk in that you have to be in Page 9 to use the BFO but I don't find that a problem. Although main tuning increments are 1 kHz minimum it still performs well on SSB for a small portable. At least the AGC action is satisfactory for SSB reception which was not the case in my DX-398. SSB sounded horrible on this radio due to the AGC pumping and overall piss-poor AGC and detector design.

Either the 1102 or the 1103 will handle ssb reasonably well. Once opn
frequency they don't drift at all. Because the receiver only tunes in
1khs increments you will have to figgle with the fine tuning knob a
fair amount. No biggy, it is just a bit slower tuning around than with
usb lsb buttons and finer main tuning resolution.

Well, if we're going to compare receivers I guess I'll put in my 2 cents worth after dicking with radios for over 40 years. I have an R-75 (second one) and I find it to be the best overall receiver for what I use it for. I modified the AGC and sync detector similar to the Kiwa scheme, and ,I've found with the various controls that I can pull DX out of the muck easier than with the other receivers I've had short of the NRD-535D. The latter was a GREAT receiver but the audio sounded like shit even with an external speaker. Surpirsingly, I've had 3 Icom R-72s and I've found them to be excellent despite the poor reviews of the past. They are the only decent sounding Icoms of them all and I would put them pretty close to the top of my list except they run very hot. The R-71A is a good receiver but a quality control nightmare with poor audio. I liked the Lowe HF-225 and the FRG-100 but found I couldn't use them here being within 5 miles of several 50 kW FM stations which mixed directly into the 1st IF. It's a shame because the FRG-100 is an excellent, and highly underrated receiver IMO. I've had 3 Drake R-8s and was not impressed with either of them considering what they go for and the hype. The Palstar R-30 was the worst of all (tried 2); birdies galore, unstable IF, speaker/cabinet resonances and just overall cheezy receiver. My simple Lowe HF-150 beat the pants off of both R-30s hands down. Now, all you "space cadet" type SWLers can go ahead and personally insult me because of my opinions! I can't wait to see the comments!

4034. Zimbabwe blitz 'really about China'

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 00:05:17 UTC
From: 1iChangchun <LiChangchun@ccp.gov.cn>
Message-ID: <11ddvg134aq9bda@corp.supernews.com>
Source record: 27573

In a document released by the archbishop's office - entitled "State in Fear - Zimbabwe's tragedy is Africa's shame" co-authored by the archbishop and Roger Bate, who is the resident fellow at the American Enterprise Institute at Washington DC and Richard Tren, who is director, Africa Fighting Malaria, in Johannesburg - they argue the controversial clean up campaign "has pointed to the removal of local competition threatening newly-arrived Chinese businessmen whose stores sell cheap and often poor quality goods".

Influx of Chinese citizens

The document reports that Chinese investors in Zimbabwe were reported to have interests in Hwange colliery, electricity generation and platinum mining.

They note too that the Zimbabwean government had purchased goods from China "such as three commercial airplanes, buses, K-8 jet trainers and military vehicles, small armaments and riot control equipment".

China was also a major backer of the ruling Zanu-PF military campaign during the war against the former regime of Prime Minister Ian Smith.

4035. Communists Against the U.S. Military

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 00:07:46 UTC
From: 1iChangchun <LiChangchun@ccp.gov.cn>
Message-ID: <11ddvkmr2hdod8a@corp.supernews.com>
Source record: 27574

A coalition of far-Left organizations that includes avowed "revolutionary communists," Islamists, marriage-abolitionists, and cop-killer advocates has launched a crusade against the U.S. military " and San Francisco school children could get caught in the crossfire. An organization known as "College Not Combat" seeks to place a resolution before Bay City voters on the November ballot,
...
The measure"s wording reflects its constituents" radical socialist orientation. The organizations that have endorsed this proposition represent a veritable Who"s Who of the Unholy Alliance. A partial list includes:

Al-Awda (San Francisco) " A Palestinian organization dedicated to the "right of return," that Israel will absorb some five million Arabs into its midst. Its members endorse the Hamas statement, "Palestine will be free from the river to the sea."

American Friends Service Committee " A putatively Quaker organization with a long history of support for Communist causes, foreign and domestic, its membership often overlapped with that of the Communist Party USA. AFSC refrained from criticizing the Soviet Union and called reports of Pol Pot"s killing fields a "misinformation campaign." More recently, the Soros-funded organization encouraged city councils to oppose the Patriot Act and joined with other leftist radicals to oppose the liberation of Iraq.

International ANSWER (Bay Area) " A front for the Workers World Party"s International Action Center headed by former Attorney General Ramsey Clark (who recently volunteered to serve as Saddam"s lawyer) , International ANSWER has supported such madmen as Saddam Hussein, Slobodan Milosevic, and Kim Jong-il. ANSWER was also the prime sponsor of the large "antiwar" rallies before Operation Iraqi Freedom.

Code Pink " A far-Left group of faux housewives established by omnipresent pro-Castro activist Medea Benjamin, the founders met while agitating on behalf of Nicaragua"s communist Sandanista government. Benjamin, with Communist Party USA member Leslie Cagan, founded the International Occupation Watch in Baghdad, an organization dedicated to getting U.S. GIs to declare themselves conscientious objectors and get themselves sent home. Code Pink spokesperson "Sand" Brim flew a surgeon into El Salvador to operate on Marxist guerrilla leader Nidia Diaz"s hand shortly after guerrillas under her command murdered American troops. Co-founder Jodie Evans is a Democratic Party fundraiser with ties to eco-terrorists. Late last year, the group traveled to Iraq to donate $600,000 in cash and supplies to the terrorist stronghold of Fallujah. They made headlines this year by bursting into John Bolton"s confirmation hearings. Furthering the

Left's incestuous relationship, Medea Benjamin's Code Pink is also a member of Leslie Cagan's United for Peace and Justice, which became the "mainstream" voice of the anti-American Left opposed to the War on Terror.

Free Palestine Alliance - A leftist Palestinian organization demanding "an immediate end to all U.S. aid to Israel," it seems to exist only as a member of International ANSWER's "steering committee." (Its contact information is the same as the IAC.)

Global Exchange - Another organization founded by Medea Benjamin, which takes credulous left-wingers on trips to Potemkin villages around the world, to demonstrate the glories of socialism (in places like Cuba) or the evils of U.S. foreign policy (in locales such as Iraq and Afghanistan) .

Green Party - Ralph Nader's political vehicle in 2000, this Red-Green alliance supports radicalization of the U.S. economy under the guise of preserving the environment. Meanwhile, its foreign policy would have kept Saddam Hussein in power and catered to Kim Jong-il. Their candidate in 2000 for California's U.S. Senate seat was none other than the ubiquitous Medea Benjamin.

Gray Panthers - This group of gray Reds denounced the 2004 vote as "the second Presidential election in a row which failed to be free and fair," implied that America deposed Haitian Marxist Jean-Bertrand Aristide, and fear-mongered last March that President Bush might reinstate the draft (five months after the Republican-controlled Congress defeated a bill to do just that, introduced by leftist Rep. Charlie Rangel, D-NY) .

International Socialist Organization - Despite supporting "Trotskyite Communism", the ISO supports (or supported) the USSR, Communist China, Cuba, and North Korea (Stalinist or Maoist nations all) , because of those nation's united opposition to the world's real enemies: the United States and capitalism. Also a member of UFPJ.

Lesbian And GAy Insurrection, (LAGAI) - A quite muddled political program seems to revolve around the Communist goal of abolishing the institution of marriage. LAGAI declares, "we feel that the queer liberation position is to oppose marriage as the central institution of patriarchy, not to try to get married ourselves." "Assimilation is not Liberation!" their flyer shouts.

Louisiana Activist Network - A radical "antiwar" organization that reproduces a quotation from revolutionary Emma Goldman on its frontpage and links to Lyndon LaRouche's political organization on its "friends" page.

Malcolm X Grassroots Movement - A radical black "liberation" organization demanding the release of "political prisoners" like Sundiata Acoli, Robert Seth Hayes, Jalil Muntaquin, Herman Bell and Russell Maroon Shoats - and commemorating those who "died for the cause" (in prison, of natural causes) : Teddy "Jah" Heath, Albert "Nuh" Washington. All except Heath were Black Panthers convicted of murdering policemen, and all are justified or excused by MXGM. For instance: "In 1970, along with 5 others, Maroon was accused of attacking a police station, which resulted in an officer being

killed. This attack was said to have been carried out in response to the rampant police brutality in the Black community.&#65533; The website decries Heath&#65533; s &#65533;racist&#65533; conviction on multiple charges, including kidnapping, because, &#65533;The kidnapping ended peacefully and without injury to anyone.&#65533; (And they s till imprisoned him?) The MXGM opposes U.S. Army recruiting but favors the domestic terrorism of the Black Liberation Army.

National Lawyers Guild (SF/Bay Area) &#65533; Once described by Congress as &#65533;the legal bulwark of the Communist Party,&#65533; the most violent disagreements within the NLG broke out between Maoists and Stalinists. The NLG has recently whitewashed North Korea&#65533;s brutal human rights violations. Convicted terror-enabler Lynne Stewart gave the keynote speech at the NLG&#65533;s 2003 national convention, in which she hailed &#65533;modern heroes&#65533; like &#65533;Ho and Mao and Lenin, Fidel and Nelson Mandela&#65533;[and] Che Guevara.&#65533; Upon her conviction in passing on messages from Blind Sheikh Omar Abdel Rahman to Egyptian terrorists, the NLG called for a &#65533;national day of outrage.&#65533; NLG is also active in UFPJ and is a vital part of the Open Borders Lobby.

Not in Our Name (NION) &#65533; Founded by Maoiost radical C. Clark Kissinger of the Revolutionary Communist Party &#65533; an organization considered extremist and violent even by fellow Maoists &#65533; this &#65533;antiwar&#65533; coalition produced a &#65533;Statement of Conscience,&#65533; signed by thousands of leftists, condemning America&#65533;s &#65533;openly imperial policy towards the world.&#65533; NION showed its patriotic spirit this year in a Fourth of July rally for the closure of the Guantanamo Bay detention center, at which it distributed an American flag emblazoned with the phrase, &#65533;Torture is immoral and unpatriotic!&#65533; (Also present were former detainees, their lawyers, Code Pink, the Center for Constitutional Rights, and feminist idols Gloria Steinem and Eve Ensler.) After Bush&#65533;s re-election, NION issued a statement accusing the Bush administration of seeking &#65533;unquestioned world supremacy&#65533; and laboring to &#65533;impose a narrow, intolerant, and political form of Christian fundamentalism as government policy.&#65533; It has also supported Sgt. Kevin Benderman, who refused to return to Iraq and stands accused of desertion and larceny, and calls convicted Iraq deserter Staff Sgt. Camilo Mejia &#65533;a prisoner of conscience.&#65533; NION is a member of UFPJ.

Peace and Freedom Party &#65533; A California-based &#65533;feminist and socialist&#65533; political party that nominated Black Panther Eldridge Cleaver for president in 1968, Benjamin Spock in 1972, and convicted cop-killer Leonard Peltier in 2004.

Party for Socialism and Liberation &#65533; A party that proudly proclaims, &#65533;we aim for revolution in the United States.&#65533; The most recent issue of their magazine hails the Iraqi terrorists&#65533; &#65533;determination and ability to resist.&#65533; And they explicitly wish to play a role in our defeat in the region: &#65533;The experience of the Vietnam War proved that the anti-war movement in the United States can gain confidence from the resistance of the oppressed peoples standing up to and defeating the largest military power in the world.&#65533;

Peter Camejo • Ralph Nader•s Green Party running mate in 2004. As a member of the Young Socialist Alliance, California Governor Ronald Reagan named him one of the ten most dangerous revolutionaries in the state. Like Reagan, Camejo ran for president in 1976, Camejo running on the Socialist Workers Party ticket. Camejo is, next to George Soros, perhaps the most prominent far-Left agitator ever to become a professional stock broker.

Queers Undermining Israeli Terror (QUIT) • A homosexual organization opposed to Israel, as though their fate would be better in an Islamic society. QUIT took part in the attempted 2004 sabotage of the Oakland Port, which ships military material to the Iraqi front.

Service Employees International Union (SEIU) (Local 790) • The largest union in the AFL-CIO, SEIU President Andrew Stern was a New Leftist prot•g• of avowed socialist Michael Harrington who studied union organization under former members of the radical Students for a Democratic Society.

Socialist Action • A Trotskyite •group of revolutionary socialists committed to the emancipation of working and oppressed people everywhere!• that believes in •permanent revolution.•

Socialist Organizer • Another Trotskyite organization and member of the Fourth International and founder of The Labor Party, SO dedicates a webpage to the writings of such distinguished intellectuals as V.I. Lenin, Karl Marx, John Reed, Eugene V. Debs, and, naturally, Leon Trotsky.

The American-Arab Anti-Discrimination Committee (SF Chapter) • The ADC is a veteran campaigner at the state and local ordinances, having spearheaded the movement to pass city resolutions condemning the Patriot Act or vowing a city•s non-compliance. The ADC also condemned the detention of terrorist detainees and the use of military tribunals, referring to American actions as •disappearances.• A member of UFPJ.

4037. CCP's Exportation of Communist Party Culture Using Overseas Media

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 00:10:32 UTC
From: 1iChangchun <LiChangchun@ccp.gov.cn>

Using Overseas Media to Spread Communist Party Culture in the New Era

Due to the number of Chinese people living outside of China, the CCP highly values gaining the support of overseas Chinese people as a means to help them export and spread CCP culture. During the Mao years, China followed a closed-door policy, making overseas media quite hostile to the CCP, and blocking channels for culture to spread.

After Mao, however, the CCP adopted a more open policy, making it easy for overseas media to expose the CCP's crimes against freedom and violations of human rights. To prevent this exposure, the CCP's strategy was to bribe overseas Chinese media with financial benefits in order to ensure that all Chinese media around the world reflected CCP culture. These media only selectively reported Chinese news, and they only "criticized" the CCP in a positive way. As a result, these forms of media indirectly spread fallacies about the CCP, including that the CCP was not only legal but also necessary to China's growth and prosperity. Though most overseas Chinese people do not believe all of the CCP's propaganda, they tend to believe overseas Chinese media. Through these media, many overseas Chinese people have unconsciously accepted the CCP culture and propaganda.

Another strategy for the dissemination of CCP culture has been to influence Western mainstream media, instilling fairy tales about how "open" the CCP is today, only serving to cover up the CCP's tyranny. This has significantly prevented Westerners from having a clear understanding of what is truly happening in China, behind the facade of openness, reform and cheap labor.

The CCP has always spread its culture using labels that evoke positive images but confuse reality; for instance, it has attached the label of "patriotism" to "supporting the CCP" instead of "supporting China." This has prevented the greater body of nationalistic Chinese people from voicing objection to the CCP by insinuating that anyone who voices resentment toward their government is voicing disapproval of the Chinese nation.

Recently, the party has further spread its culture overseas under the label of "maintaining cultural tradition, cultural security and the independence of Chinese culture." Anybody who is familiar with the Cultural Revolution knows that China's traditional culture has in fact been wholly transformed in order to spread CCP culture. From the very beginning, the CCP never truly intended to promote Chinese traditional culture at all, but only used it as a means to promote itself and cover up its destruction of true traditional culture. However, we should not forget that the CCP has not been beyond reaping the benefits of the label "traditional culture" whenever possible. Two primary examples of this are the CCP's rejections of the ideals of Western democracy and religious freedom in the name of "protecting traditional culture."

...
In Mao's time, the emphasis of CCP culture was class struggle; today, it is economic benefits. The CCP emphasizes stability for economic development, yet their definition of political stability necessitates accepting the dictatorship of CCP. The CCP's history of terrible crimes has made almost every Chinese person suffer, to various degrees, from political and economic chaos. Chinese people are aware of this suffering, but their financial needs seek economic remedies. Therefore, the CCP has added "economic benefits" to party culture in order to subtly change people's view of CCP, and eventually make people accept the legality of the CCP. In effect, the CCP has used the past 20 years of its rule to purposely guide people to care more about economic benefits and material interests, and ignore the party's crimes. This creates the possibility that Chinese people will continue to accept the CCP, only this time it is on the basis of economic growth.

We can clearly witness these changes in CCP culture in many of the immigrants from China; they no longer pay homage to their traditional values, but instead prioritize economic benefits and material interests over social responsibility and conscience. Accordingly, the CCP has spread the cultural values of "seeking personal interest" and "not getting involved in politics" through many overseas channels.
...
We must clearly recognize this poison on various levels of our society, and we must clean up the channels through which it is spread. Only when we do this can we further expose the malicious methods of the evil CCP specter, which has infiltrated people's minds and lives in many ways, both subtle and not-so-subtle. This is our only hope to improve the moral standard of society on a grand scale, and get ready for a democratic, free and morally conscious new China.

The ?Color Revolutions? occurring in Central Asian countries has caused panic within the Chinese Communist Party (CCP) . In late May, Hu Jintao, CCP General Secretary, issued an internal order to implement policies aimed at preventing the U.S. and Europe from starting Color Revolutions in regions surrounding China. The report, disseminated all the way down to the county-level, ordered strict controls over the media, strengthening of the monitoring and control of dissidents and civil rights advocates, and a complete review and closure of all companies printing dissident materials.

In late May, Hu Jintao issued a report at an internal conference entitled Fighting the People's War Without Gunsmoke- Stop the U.S. and Europe From Starting a Color Revolution in Countries Surrounding China and Crush U.S. Attempts to Start a Color Revolution in China. This report was issued to all county-level governments in late May in the form of an official Central Committee document.
...
It was said that many of the CCP cadres who read the report exclaimed in surprise that the Mao Zedong era was back.
...
In the beginning of this year, the CCP?s Central Committee issued the book How the Reagan Government Destroyed the Soviet Union to all cadre members.

Well, Left-Dogg, this social experiment has already occured.
Please read the many books available on the subject of the
Chinese Cultural Revolution - circa 1960's.

Surely, a grand mullah will arise out of the murderous turmoil
to lead all the little Red boys and girls to do their dastardly deeds
in the name of their fictitious allah - the allibaba of lives.

Yes.... I agree 100 %. Prices and stat sheets asside, I prefer it for
DX'ing over every other radio that I have tried. I admit I have not used
any megabuck professional receivers but I have used the R8, R8a, R8b,
R-5000, NRD-545.

I've had short

I thought exactly the same thing of the NRD-545. I'm gratefull I got to
test one out before I spent the money on one. I must say though, it was
solid as a tank and was the best looking radio I ever saw. I also loved the
way the user interface was set up.

Michael

4047. To Defeat Terrorism, We Must Defeat Communism

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 00:57:13 UTC
From: 1iChangchun <LiChangchun@ccp.gov.cn>
Message-ID: <11de2hjihgnk9cb@corp.supernews.com>
Source record: 27586

As London recovers from the terrorist attack of July 7, nearly everyone has fingered al Qaeda as the culprit. This is true, as far as it goes. Al Qaeda itself has claimed responsibility for the attack, and has proved to everyone why the War on Terror must continue until Osama bin Laden and his cohorts are defeated.

However, those who are willing to leave it at al Qaeda do not nearly go far enough. Although the attack in London was not nearly as sophisticated as either the March 11, 2004 attack in Madrid or the September 11, 2001 attack against New York and Washington, it did require organization, timing, planning, and money. This could not be accomplished by an organization scrambling for its own survival in Afghanistan or western Pakistan. With this attack, al Qaeda has revealed that they have a new base of operations from which it can continue to strike against the free world. Increasingly, it is becoming clear that this base is in Iran, which means al Qaeda is surviving, and recovering, at the behest of the Iranian mullahcracy's geopolitical ally and military benefactor: the Chinese Communist Party.

It is no secret that the CCP terrorizes its own people, and to those knowledgeable on the subject, the Party's anti-Americanism is also a given. However, very few are aware of how deep the Communists' ties to international terrorism go — and that general ignorance is no accident. It is part and parcel of the Communist strategy against America. As Kevin Spacey's character in The Usual Suspects put it, "The greatest trick the devil ever pulled was convincing the world he didn't exist." The Chinese Communist Party is attempting the same trick with its ties to terrorism, but without the same success: those ties are still there for all to see.

The Communists have laundered Osama bin Laden's drug money for him through their numerous financial fronts in stock markets around the world. They signed an economic agreement with his Taliban hosts the day the World Trade Center fell. They installed a fiber-optic network in Iraq to help Saddam Hussein integrate his entire defense network, and then sold him missile gyroscopes and other military technology for oil-for-food vouchers. They have a long history of economic and military ties to Syria, whose Ba'athist regime has been a Hezbollah protector and ally for years. In fact, Syria was the host of current Communist leader Hu Jintao when he called Israel a "colonialist plot aimed at detaching from the Arab nation a part that is dear to it — Palestine." The Communists have also been instrumental in the Iranian mullahcracy's efforts to become a nuclear power, despite — or more likely, because of — the Islamic regime's aid and comfort to al Qaeda operatives, including many of the 9/11/01 terrorists themselves.

For Communist China, this continuing support for terrorists striving to kill Americans is no fluke, for the Communists' entire geopolitical strategy is

designed to damage and, eventually, subdue the United States. So long as America remains the "shining city on the hill," the Communists will try to snuff it out. The conquest of democratic Taiwan and eclipsing of Japan and India as the lead Asian powers are merely steps to world domination, for that is the only goal that will satisfy the radical nationalism the Communists are stoking to distract the Chinese people from the endemic corruption, horrifying persecution, and crippling poverty the CCP has forced upon them. As such, Communist China will never stop working against America; nor will the regime cease from supporting her terrorist enemies.

During the First Cold War, between the U.S. and the Soviet Union, Moscow outsourced a good deal of its operations to its Cuban satellite state. The Communists in Angola, Nicaragua, and El Salvador were all clients of Havana, but everyone rightly pointed to Moscow as the ultimate beneficiary and benefactor of these forces.

America is now in the midst of the Second Cold War against Communist China, whose direct support of terrorist sponsors such as Iran and Syria is in fact indirect support for the al Qaeda terrorists who killed scores of Londoners, hundreds of Spaniards, and thousands of Americans. Any claim to the contrary is belied by the fact that the Communists have also been willing to directly support al Qaeda.

The War on Terror has become a part of Communist China's battle against the U.S., and is now one of the many theaters in Cold War II. America, the United Kingdom, and the rest of the free world will never be secure until the Chinese Communist Party joins its Soviet and Eastern European brethren on the ash heap of history. Until that day comes, the War on Terror cannot and will not be won.

http://english.epochtimes.com/news/5-7-12/30287.html

D.J. McGuire is President and Co-Founder of the China e-Lobby, http://china-e-lobby.blogspot.com/ and the author of Dragon in the Dark: How and Why Communist China Helps Our Enemies in the War on Terror http://www.dragoninthedark.com/

East Turkestan is occupied by Communist China: the largest supporter of terrorism on the planet. Whether it's the Iranian mullahcracy's lust for nuclear weapons, Saddam Hussein's desire for weapons and defenses of any kind, or even al Qaeda's need for a money launderer, Communist China has been there ready and willing to help anyone who wants to kill Americans and weaken America. Yet the Communists have taken advantage of East Turkestan's overwhelmingly Muslim population to smear them as al Qaeda supporters and anti-American terrorists, when nothing could be further from the truth.

The proof of that comes from al Qaeda itself, which has not mentioned East Turkestan so much as once in any of its diatribes against the civilized world. Osama bin Laden has demanded the U.S. leave Iraq (and before that, Saudi Arabia), the Israelis leave Palestine, and even that the Spaniards leave Spain. However, he has never criticized his Communist cronies who,

according to at least one expert on Islam, have turned their Communist-controlled "official" Islam into a Wahabbist knock-off " for their horrific occupation of East Turkestan.
...
In 1949, when the Chinese Communist Party defeated Chiang Kai-shek"s government on the mainland, they invited the leaders of East Turkestan, then an independent nation just north of (and a bit larger than) Tibet, to come to Beijing for talks on the country"s future. On August 27 of that year, the plane carrying the leaders of East Turkestan crashed, killing all on board. The Communist marched in and have occupied the overwhelmingly Muslim country ever since (they even renamed it "Xinjiang").

The occupation has been beyond brutal: open-air above-ground nuclear tests that killed hundreds of thousands, executed political prisoners, razed mosques, mass forced immigration of ethnic Chinese, deliberate economic discrimination in favor of said ethnic Chinese, "Sinicization," etc.

Meanwhile, Osama bin Laden has spoken out against the American military presence in Saudi Arabia and Iraq, the Israeli military presence in the West Bank, and has even talked of reclaiming Spain (last under Muslim control in the 15th Century), but on the brutal treatment of Muslims in East Turkestan " just next door to his five-year headquarters in Afghanistan " he has been completely silent, lest he offend his Communist friends.

[You won't find Islamic extremists or Leftwing Calipornia Neo-Communists protesting in front of any Chinese Embassies.]

Despite this, on September 11, 2001, Communist China saw an opportunity, and grabbed it with both hands. Suddenly, the Muslim resistance in East Turkestan was all the rage in Communist China, with one change: the Communists were now claiming their Muslim dissidents were supporters of Osama bin Laden and al Qaeda.

This was, and still is, the height of unmitigated gall. Communist China is itself one of the leading supporters of terrorism on the planet, with aid and support given to the aforementioned al Qaeda, Iran"s Islamofascist regime, the Taliban, and Saddam Hussein. The idea that they would now be fighting terrorism was ridiculous, but they continue to say it, and far too many people continue to believe them.
...
Communist China has tried to hide their ties to terrorism, but those ties are there for all to see. The Communists have laundered Osama bin Laden"s drug money for him. They have been instrumental in the Iranian mullahcracy"s efforts to become a nuclear power as the Khameini regime was giving aid and comfort to al Qaeda operatives, including many of the 9/11/01 terrorists. They signed an economic agreement with the Taliban the day the World Trade Center fell. They installed a fiber-optic network in Iraq to help Saddam Hussein integrate his entire defense network, and then sold him missile gyroscopes and other missile technology for oil-for-food vouchers. They have a long history of economic and military ties to Syria, which was the host of current Communist leader Hu Jintao when he called Israel a "colonialist plot

aimed at detaching from the Arab nation a part that is dear to it &#65533;
Palestine&#65533;.

Back in the days of the First Cold War, between the U.S. and the Soviet Union, Moscow outsourced a good deal of its operations to its Cuban satellite state. The Communists in Angola, Nicaragua, and El Salvador were all clients of Havana. Everyone rightly pointed to Moscow as the ultimate beneficiary and benefactor of these forces.

Yet Communist China has managed to turn the Iranian regime into its chief ally and proxy in the Middle East and almost no one thinks to finger Zhongnanhai for its client state&#65533;s support of terrorists, including al Qaeda.

That has to change.

As longtime members of the China e-Lobby know (largely because I have all but hammered it into their heads), I wrote a book on this subject two years ago on the ties between the War on Terror and the Second Cold War (Communist China vs. the United States). Yet almost no one seems willing to connect the dots. Even today, hardly anyone is willing to call to account al Qaeda&#65533;s state sponsors and protectors (at this point almost exclusively Iran, although Syria is clearly helping anti-American jihadists join the Zarqawi clique), let alone the Communists.

If this continues, the War on Terror can not and will not be won.

Folks, you may hear this nowhere else, but that doesn&#65533;t mean it isn&#65533;t true: America, the United Kingdom, and the rest of the free world will never be secure until China itself is free. The road to victory in the War on Terror does not end in Kabul, Baghdad, Tehran, or Damascus, and it certainly doesn&#65533;t end in Jerusalem. The road ends, and lasting victory can be found, only in Beijing. Until China is on the list for liberation, preferably peaceful, the War on Terror will never end.

Yeah, they have some nice programming, too. I like to use this station
as a kind of 'benchmark'. I regularly tune to it to see what reception
is like.

Thanks, Phil. I have to walk with a cane and can't do much, but I
haven't given up.

The Bozos are just sore that their TV show was canceled and that no
one wants the tired old clowns in their way. ;-)

http://www.msnbc.msn.com/id/8569229/

Poll finds Muslim support for bin Laden waning
In heavily Islamic countries,

WASHINGTON - Support for Osama bin Laden and terrorist bombings against Americans and their allies in Iraq is falling in several heavily Muslim countries, particularly those where terrorist attacks have occurred.

According to surveys conducted for the Pew Research Center for the People & the Press, young people in Morocco, Lebanon, Pakistan and Turkey view America more favorably than the overall populations in those countries.

However, the research found solid majorities in Lebanon, Pakistan, Turkey, Jordan and Indonesia have an unfavorable view of the United States, while Moroccans are split.
Story continues below ↓ advertisement

“There are some signs — especially in Indonesia, Morocco and even Turkey, where they’ve had their own experience with terrorist bombings — that there’s less support than there was in 2003 for suicide bombings and for bin Laden,” Pew director Andrew Kohut said.

Pew interviewed people in 17 countries, six of which — Indonesia, Jordan, Lebanon, Morocco, Pakistan and Turkey — have majority Muslim populations. The polling was done before last week’s terrorist bombings in London.

Fewer justify suicide bombings
In Lebanon, the number of people who think the use of suicide bombing and other forms of violence is justified in defense of Islam has dropped from 73 percent in the summer of 2002 to 39 percent now. Smaller drops were seen in Morocco, from 40 percent a year ago to 13 percent now, and in Pakistan and Indonesia. In Jordan, the number of people who feel such violence is justified has grown slightly; the number in Turkey remains very low.

Since March 2004, the sentiment for suicide bombing against Americans and their allies in Iraq dropped from 70 percent to 49 percent in Jordan, which neighbors Iraq, and dropped by smaller margins in Pakistan, Turkey, and Morocco.

Public confidence in bin Laden has dipped sharply since May 2003 in Indonesia, Morocco, Lebanon and Turkey — all countries that have experienced recent terrorist bombings. In Pakistan and Jordan, a majority of people continue to say they have at least some confidence

in bin Laden, the Saudi leader of al-Qaida.

Hate to burst your bubble but the government does not control oil prices.
They are strictly a market driven commodity. The most recent spike in prices
is due to gulf coast oil rigs shutting down because of the hurricane. I imagine
they are now coming back online. What is needed is more oil wells inside the
US,, but between govt. regulation and the wacko enviromentalism this isnt going
to happen soon. Its still cheaper to buy from OPEC, than to put up with all the
OSHA regs. and other BS an oil company has to put up with, sad but true.

>

Frank,

I'll go first!

When you say "I find it to be the best overall receiver for what I use
it for" that is the right phrase. You have found the reciever that works
best for you. Congratulations.

There are many different receivers just as there are many different
listeners. Each listener may be looking for something different in a radio.

Just because radio 'x' doesn't meet my need there is no reason for me to
be concerned that it satisfies your requirements. Nor is there any need
for me to tell you that my choice for a radio would also be the best for
you.

I may choose to tell you which radio I prefer to use. But if I don't decribe my listening preferences, antenna, and conditions that existed when I made my decision or comparison, I am not really saying anything of value. For my opinion to mean anything, you have to know the context.

Your post indicates you go after DX. It also indicates that strong FM stations have caused problems with some radios. That information adds the context that explains why some radios didn't work for you. It may also tell the reader who doesn't have nearby FM transmitters that the FRG-100 may be worth looking at. A reader that has nearby FM transmitters may want to avoid the FRG-100.

You have also indicated that you have experience with many different radios. This also is worthwhile as your comments carry more weight than someone saying that radio 'y' is the best he's ever used only to find out later that it was being compared to a $25 thrift shop special.

My bottom line: Good Comments.

craigm

> Or is it self justification on your part because you either don't have or
> don't
> want to spend the money for a better rig?

No... Not true at all. I'd spend more money on a better rig. I was going to buy an NRD-545 not too long ago. I tried one out on loan from a friend. Although I loved the way it looked and I loved the way the controls were set up, I thought the weak audio was a serious distraction. Still... That is not why I didn't get one. I was primarily looking for a better DX'ing radio. I'd deal with lesser audio if the DX'ing abilities were better then my R-75. I came to the realization after testing out the NRD-545 that noting could help me DX' any better due to the high noise floor here in north NJ. I dont need a new rig, I need to move to another area.

I always did want to see the American southwest. May be Arizona :-)

> Yes, it's an OK radio, but come on...

OK.. I know you like your R8 series, but do you really think the R8 series is better then the R-75 for DX'ing. ??? The R8 series is only WAY better then the R-75 for one thing and one thing only. And not... not program listening. With my Kiwa mods and external speaker, it does well for program listening. Although not too many people mention it when comparing the R8 with the R-75 because everyone is pointing out the synch thing, the R-75

SUCKS ON ICE for medium wave DX'ing. It's way too noisy. I loved using all of the R8 series for MW, especially the R8b. I thought the R8b's AM synch was the cats ass.

Regardless, you cant tell me the R8 or R8a or R8b is better at SW DX'ing then the R-75.

Michael

Jesus when I said get a brain I meant a live one not one out of a corpse.
Its over already huh???? Lets see this AM I

filled my gas tank at 2.15 a gallon
the unemployment report was at 5% (which is considered almost full employment)
the stock market closed at 10,6xx close to a high back at 9/11/01
inflation is almost non existant
housing starts are going thru the roof
factory orders are up

Yep,,,, its over

I believe I already did. Several times!

By the way... I can never figure out why folks who claim to own an R75 most always refer to it as an R-75. Don't you look at the front panel?

Yup thats what I thought,,, another rabid Bush hating screaming me- me
liberal. Jimmy Carter had it right????????????? That is so laughable.
Lets see when he left office unemployment was 11.x %, the prime lending
rate was 14% or so, inflation was running at 10-12%. He had bastardized
the US military so bad we couldn't even stage a successful raid on Iran.
Jimmy Carter was a "classic" example of how a president can destroy a
country in one term. If you transposed those economic no.s above to
today you'd have half the country calling for Bush's impeachment, and Id
be one of them.

I wonder if the nuclear weapons will miss those Wal Mart stores?

And just how do they think they'll win their bid with Unocal after saying
shit like this?

> Well, Left-Dogg, this social experiment has already occured.
> Please read the many books available on the subject of the
> Chinese Cultural Revolution - circa 1960's.

The Cultural Revolution was more like the period of chaos that followed the defeat of the Soviets by the mujahedin in Afghanistan. The "freedom fighters" turned against each other with the main enemy gone, and ruthlessly slaughtered each other like the Red Guards did. That created a power vacuum that led to the rise of the Taliban. If Mao had been unwilling or unable to use the PLA to rein in the Red Guards it's possible that China would have fallen into an Afghanistan like state eventually resulting in some sort of mafia type rule. Or it could have become like Somalia where a few main cities remain killing fields while the rest of the country balkanizes into a number of fiefdoms. Suicide bombing is a totally new type of threat to civilization, one where everybody is a potential mass murderer. Before the threat came from a limited group-Red Guards, mujahedin, various secret police agencies or warlord's militias. And it was limited to one region or country. Today the threat is global in scope, and anybody can participate. Just think of what would happen if America's youth become suicide bombers.

> Surely, a grand mullah will arise out of the murderous turmoil
> to lead all the little Red boys and girls to do their dastardly deeds

You mean like Osama? By the way, communism and Wahhabi Islam have nothing to do with each other, something your one track mind and Red colored glasses can't seem to comprehend. Al Qaeda was born out of the fight against Afghan Communism.

It's coming on right now. I just heard the first few notes of their
theme music. Not a bad signal either. Conditions must be improving.

Steve

Haven't I wasted enough time on you already? You really need to learn how to pay attention.

Start off by gazing at that front panel and try to commit to memory the fact that you're using a R75 vs. an R-75.

That would be a good start. Now you get back to me tomorrow and we'll see if you've made any progress and then perhaps we might proceed from there.

Ah, so the truth comes out. You drop acid then post. LSD is a chemical,
an artificial chemical. If an LSD trip is reflective of the mind of God,
then stop the universe, I wanna get off. I think you've been taking too
much acid, if your posts are any indication. You drop acid while
watching The Daily Show then pretend to be an authoritative voice.

Oh... the front panel. I see it... Your wrong again... It reads "IC-R75".

> That would be a good start. Now you get back to me tomorrow and we'll see

I've become acustomed to your efforts of misdirection when you end up on the short side of a discussion. Now, let's get back to the larger point.

The R-75 is a better DX'ing, SSB and utility rig then the R8, R8a and R8b. Throw brand loyalty to the wind and shake hands with the facts.

Michael

Hardly obsolete, and even if it was, why sell it to the ChiComms???
Just another example of Jimmy Carters foreign policy. "Be nice to your
enemies and they will be nice to you" laughable,,, if he was the CEO of
a fortune 500 company and ran it the way he ran the country they would
be bankrupt and history in very short order. He was an abject clown
for a president. His idiotic grain embargo against the Soviet Union did
nothing to the USSR but it did just about ruin the american farm
economy, and added greatly to the unemployment problem that already
existed. Yea he was a great guy..... if you like clowns

And Carter brokered the deal.

LMAO... you really are full of it tonight aren't you? And you still haven't gotten even a simple grasp yet of what radio you are using (R75) and I'm supposed to believe you?

By the way, if anyone is on the "short side", it be you! After all, I'm not using an ICOM R75.

You keep plugging away though, and someday you might just make it.

Until then, I'll just be sitting here LMAO!

I wasn't wrong at all, 'tard boy... PLEASE try to pay attention. It DOES NOT say R-75 does it, 'tard boy?

Damn, you sure got a thick skull.

The deal was brokered well over a hundred years ago. All Carter did was
work out a treaty that would allow us to still use the canal after it had
gone back to Panama.
```

In terms of DXing and pulling stuff "out of the mud" you should read
about Terry's (r2000swler) experiments with receiver detector circuits.
This was very enlightning as to where many of the so-called
"sensitivity" or signal to noise ratio problems may lie in receivers.
He's done some great experimental work here with encouraging results.
I think most of his stuff is on the R-2000 Yahoo group.

Frank

You should like an insolent child on a playground. I'm still waiting for you to call me a "tard"

Do you have any quality commentary to offer here ??? That doesn't include fantasy. Insisting that any of the R8 series is superior to the IC-R75 for DX'ing and SSB/utility displays either a lack of experience with both of the radios or a petulant compulsion to spew out unqualified commentary to support bias and brand loyalty.

Michael

4075. Re: To Defeat Terrorism, We Must Defeat Communism

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 02:13:09 UTC
From: fcathell@msn.com

I think you are definitely correct here even though this doesn't seem to be related to shortwave.

FC

Yes, the R8B and RX340 both have this and it often works better than
passband tuning alone.

It doesn't read R75, nimrod. If you insist on mocking people for a petty oversight, I suggest that you should take more care not to make any oversights yourself as you have just done. It reads IC-R75. Now be reasonable and stop casting stones from your glass house.

Simply put to your stone casting frustration... The IC-R75 is a better radio for DX'ing and SSB/utility then the R8 series.

Yield to the facts. I promise you'll feel better once you do so.

Michael

Sure it does 'tard boy... look at it again! It sure as hell doesn't say 'R-75' now
does it?

> If you insist on mocking people for a petty
> oversight, I suggest that you should take more care not to make any
> oversights yourself as you have just done. It reads IC-R75. Now be

Like I said, your skull sure is thick!

> Simply put to your stone casting frustration... The IC-R75 is a better
> radio for DX'ing and SSB/utility then the R8 series.

Your fantasy, not mine!

> Yield to the facts. I promise you'll feel better once you do so.

I faced up to the facts many, many, years ago, 'tard boy. That's why I don't use
ICOM radios!

Get a frickin' clue, and try not to cry yourself to sleep tonight.

Clearly, your prone to antagonistic gestures when your compulsion drives you agaisnt facts. Your commentary is a Freudian delight. It's crawling with clues.

I strongly recommend you relax your compulsion and spend a few hours with the R8 and the IC-R75. Do a few side by side comparisons for DX'ing and utility. I promise that self discovery will be far more fullfilling over denial.

Greetings to All,

Try checking to see if your computer has a built in clock like mine has. This can be checked by clicking on Settings on your control panel. I have my clock set to GMT BUT one can set it to his local time or what ever time zone that he wants.

Good Listening and DX!!!

The Drake was much better built and actually quite portable.

Anyone know of a place that sells amateur or SWL type furniture? I am looking for deep shelves that can hold some heavy and not so heavy receivers (and other gear).
Thanks

Carter signed away the US's rights to the canal when he could have renewed
them. He signed them back to a very corrupt Panamanian govt. that had known loose
ties to China. Anybody with a tenth of a brain would have known that a corrupt govt.
would sign away the rights to the canal to the highest bidder, guess who that was.??
It was a very strategically stupid thing to do, but then again that was Carter.

Hold it Mike. Didn't you say that you are in a noisy area? Sensitivity (then) becomes the least important papameter you should consider (it's actually not a very important parameter for most of us since we are usually limited by atmospheric noise that is much greater than the receiver noise floor). Worry more about ultimate selectivity, dymanic range, etc.

Also I think you have your decimal points badly screwed up above. (.02 should be 0.2)

China prepares for war with U.S. over Taiwan

"Use reality, make a noise in the east, but strike to the west. Cut time and strike in multiple waves."
-- PLA Col. Wang Benzhi, on missile strikes against Taiwan

Missiles targeted at American cities

``DSP reports five events from known ICBM bases in western China.'' The airman's voice was tense but carried an air of nonchalance, a sign of rigorous training.

The airman was stationed inside a dimly lit command bunker nearly a mile beneath Colorado's Cheyenne Mountain, along with 20 other airmen, soldiers and sailors from the U.S. and Canadian militaries. This is headquarters for the North American Aerospace Defense Command, known as NORAD.

At NORAD, they think about the unthinkable 24 hours a day, seven days a week. Closed to the outside world by huge steel doors designed to withstand a nuclear attack, the bunker is where military personnel scan the globe from computer terminals, looking for signs of missile launches. They depend on infrared sensors around the world, primarily the constellation of satellites with the nondescript name of Defense Support Program - or DSP, as the airman said.

The five ``hot pops'' he reported as picked up by satellite over China were the first sign of trouble. Less than a minute later came more bad news: ``Sir . . . we have multiple missile launches. Stand by for target report.'' A few seconds later, the intelligence officer on duty broadcast further details: ``Intel indicates probable launch of five ICBMs from China. Intel assesses this to be combat against North America.''

Each of the CSS-4s carries a huge, 5-megaton warhead with the equivalent of 5 million tons of TNT - enough to blow up an entire city. NORAD's computerized attack-warning network plotted the targets of the incoming ICBMs and they appeared as dots on the giant map: Seattle, Colorado Springs (site of the Cheyenne Mountain complex), Chicago, New York and Washington.

Air Force Col. Allen Baker, NORAD's director of operations, explained that confirmation of Chinese missile launches would be followed by a call to the White House.

``At this point, I'd be telling the president how many minutes until Washington, D.C., is gone,'' Col. Baker said.

Flight time from China to the capital: about 35 minutes. Asked whether the U.S. military had the means to shoot down the incoming missiles, Col. Baker said, ``Absolutely nothing.''
...
On June 27, 1998, Chinese President Jiang Zemin appeared at a news conference after meetings with Mr. Clinton in Beijing. He announced: ``President Clinton and I have decided that China and the United States will not target the strategic nuclear weapons under their respective control at each other. This demonstrates to the entire world that China and the United States are partners, not adversaries.''

As with so many other statements by the Chinese Communist leader, President Jiang lied. The proof arrived in a form common during the highly politicized Clinton administration. It was kept hidden from public view as part of a classified intelligence assessment. On Dec. 2, 1998, the Pentagon's Defense Intelligence Agency (DIA) reported that the Chinese People's Liberation Army conducted exercises that included simulated nuclear missile attacks on Taiwan and U.S. military forces in the region.

The exercises, which ran from late November to early December, involved road-mobile CSS-5 medium-range missiles spotted by U.S. spy satellites as they moved up and down roads along China's coast. The DIA report, based on sensitive intelligence gathered by U.S. spying systems, also cited activities by silo-based CSS-2s.

``They were doing mock missile attacks on our troops,'' said one official who saw the report.

Analysts determined that the mock nuclear attacks not only were targeted against Taiwan, but against about 37,000 U.S. Army troops based in South Korea and 47,000 Marines in Japan, including 25,000 on the island of Okinawa.
...
http://www.gertzfile.com/gertzfile/excerpt3.html

The goal of Communist China is to exclude the United States both economically and militarily from the Asian-Pacific region. The grave fault in this logic is that the United States, geographically, economically and politically, IS an Asian-Pacific nation. The United States will always have an intimate strategic interest in the region.

Li, you're getting increasingly mentally unstable. Get help. Does
anybody know what he's referring to, other than the fact that the US
funded the mujahedin in the 80s, only to have it bite us back on 9-11?

But I have no any possibilites to select anything except "(GMT+03:00)
Moscow, Sankt-Peterburg [some etc..]) Programs also have no any options.
I saw "UTC bug" in one of them, but it does not do anything useful.

This illustrates a BIG error in Western thinking about terrorism: the terrorists couldn't POSSIBLY accomplish what they accomplish without the support of a state, the idea goes. Iran fits the bill, but they aren't rich enough, so say the "experts", so China must be funding and equipping the terrorists. In reality, Osama has the financial support of many of the oil sheiks the US likes to think is on its side. They have bottomless pockets, thanks to America's bottomless appetite for oil, and they're funneling lots of that money to Osama. Plus, it doesn't take a state to plan a terrorist attack. A small group of American men, maybe as few as two, managed to pull off the bombing of the federal building in Oklahoma City in 1995 without the support of any state. They used ammonium nitrate fertilizer and gasoline to build a bomb that leveled the building. It killed 168 people and at the time was the worst act of terrorism ever on American soil. A terrorist attack can be carried out by a small group of people who are simply inspired by Osama's fiery rhetoric. Now 9-11 is a different story. Osama had a base in Afghanistan from which to plan, deep pockets in the form of those oil sheiks, and men willing to fly planes into buildings. It has been estimated that the 9-11 plot cost $100,000, an amount that would be a drop in the bucket to, say, the Saudi royal family, known backers of terror. All the elements were there: safe haven in Afghanistan, financial backing from the sheiks, and men willing to die for Allah. The rest could be arranged. I've heard such assumptions about Al Qaeda such as the idea that they couldn't afford purebred dogs for chemical weapons experiments. Osama may live in a cave and ride around on a donkey, but

he's far from poor-his personal fortune is estimated at $30 million, and he has those sheiks backing his terror campaign too. The notion that they're too preoccupied with surviving to plan anything is fallacious too. Remember Osama's last video, in which he "looks like he's been hiding out in St. Tropez" as Newsweek put it? He's probably living in a Pakistani city in relative comfort, still planning attacks. America holds certain assumptions about Al Qaeda without realizing it. It does so at its peril.

The flaw in this logic is that if the oil sheiks are funding the jihadis, it would go against everything they have. For starters, the sheiks are 'haves' and the jihadis 'have nots'. Also, by destroying the economies of the Western consumer societies, it would pretty much rip away the base of their money.

It has been estimated that the
> 9-11 plot cost $100,000, an amount that would be a drop in the bucket

Huh? The Saudi royal family are TARGETS of the jihadis, and have been since before 9/11. The royals are scared of Osama.

So everybody who questions your Cold War rhetoric that blames the world's ills on China is automatically a communist themselves? Joe McCarthy would have LOVED you. Islam is Communism, the American Left is a united front run from Beijing, everybody who dares to question Bush is a commie lover. Not only are you paranoid, you're ideologically rigid too. You're still a "true believer", you've just switched from the Far Left to the Far Right. We're not fighting Communism anymore. We're fighting Islam. The two are not equivalent. Do you even listen to shortwave? Most of what you post is from the Epoch Times, a source of "news" that is about as balanced as CRI or RHC. The latter are on the left, the former is on the right. Each side has an agenda. Are you too blind to see that you have an agenda too, and that you're only using "news" that also has an agenda, and a rather obvious one at that?

Mostly because they are IC-R75 (and IC-R8500). There's a hyphen in
there, somewhere... I need the "R" to distinguish between the R8500
and my FT-8500, just in case I get confused. :-)

Okay, if you want to dig into the stone age, you can go look up

Message-ID: <tlrndugnqq23ob2loh07ulr7th5i5ltlgg@4ax.com>

Where I had the R75 and the R8B side-by-side under the bad conditions that soured me on the R75. While the R8B couldn't handle the situation well there, either, it handled it a great deal better than the '75.

The R8B is also noted to have a better choice and better shaped filters.

Finally, the audio is far superior on the '8B.

Me, the '8500 has wonderful audio. Shitty filters, wonderful audio. :-) Can't have everything...

Now a comparable new product to the '75 would be the WR G303. Yes, it needs a computer, but the SDR has incredible capabilities. It also has similar weaknesses to the '75, so if you have no problem with the '75 you'll have no problems with the '303... plus you'll have incredible filters and audio as good as your sound card (which can be very good).

An old product? Well, my R-392 is the Ultimate Bulletproof Receiver with all those tuned stages in it. It's also portable, especially compared to the better big brother R-390. Mine cost $100.

...you can always add a sherwood engineering detector, connect it to the I.F. out, and get that sync detector you want. You get a better sync detector, too... :-)

Well, "the best rig money can buy" ought to have good basics, or, by
definition, it isn't "the best rig."

Say rather, a $5000 radio with a fatal flaw in the basics is sorrier
than a $700 radio with the basics right but no frills.

My FRG-100 was that radio. Not as pretty as the '75...

I did just that. I also posted a link to it. My admittedly
radio-hostile environment was the subject; the question was (at the
time), what the hell is wrong here?

Ironically, the radio-hostile environment was swamping the radios
with RF on a...

...wait for it...

...radio quiet zone!

I'm using office furniture with risers about 10" or so high and 12-14" deep.
It works well for standard-sized table radios and puts the dials closer to
eye level. Install some under-shelf lighting under the riser and it works
great.

Dyess B-1B has bombing trouble: 11175 kHz USB
==========

It is Fri., 12:59am (0459z).
Monitoring 11175 kHz USB HF-GCS.
Just heard some very interesting comms from a Dyess B-1B pilot over
Salt Lake City talking to Dyess SOF. Dark 46 had a problem releasing a
bomb, the bomb is not hung, but there are other problem indications.
He is RTB to Dyess now. Pilot was discussing this with a YL SOF who
seems to be one of the most knowledgable YLs concerning weapons that I

But the gov can control the supply and price thru colluding with just one Opec country Saudi Arabia. Don't foget they now have access to the flow from Iraq also. If the big oil corps that put Bush in office decide to "dry things up a bit", you damn well better believe they can pull it off.

This energy crisis is part of a form of panic inducing behavior that the gov wants to instill in us right now and they are being very successful at it. It throws us off balance and misdirects our energy and thoughts.

Soon, the oil supply "will dindle" causing a real world panic. Just remember to keep your head when all those around you are losing theirs.

Yes I agree,

great comments from Frank. It was good little read! I was surprised at the reaction to the Palstar 30 though. I thought it was a decent receiver and was ready to bid on a "Lowe HF-350" made by Palstar. But Frank has me happy the auction got pulled.

Yes you are right. Without letting anyone know what your listening habits and preferences are, the review and opinion means nothing.

All that wasted typing :)

Lucky

Gee, I already did that some time back!

Keep trying.

Body handling: HTML body converted to readable text

I ended up building my own. I'm not Tim the toolman either. Although they don't look all that great, they work! BTW it was bookshelfs to hold radios, lots of nooks for books, scanner, radios, have antenna stuff screwed to it also.

"Brian Denley" wrote in message

Do you have an opinion as to whether the R75 is superior to the AOR 7030+ for DX purposes? I ask because the 7030+ and the R8B are usually described as about even in this regard. (I'd actually give a slight edge to the R8B, but that may just reflect some of my own personal preferences.) If this is correct, and if the R75 "beats" the R8B, then it should also beat the 7030+.

Does that seem right to you? If so, which receiver currently on the market would one have to buy to beat the R75? An RX-340 maybe?

Steve

I haven't had any LSD in a long time. LSD is the key to religion. It
proves that the Creator was a geneticist.

Ok, where do I start? Is there a guide somewhere? I was not a DXer
nor would I describe myself as a shortwave enthusiast in the past. I
just enjoyed listening to a few shortwave stations mainly for
information I couldn't get locally at the time. I have a friend who
enjoys plane-spotting. He goes to Logan Airport with a camera almost
everyday and gets excited when he sees a new plane or one in new
"colors" or strange markings. Is being a shortwave enthusiast a little
like that or is it more useful and less neurotic?

Yes, www.google.com

I'm not trying to be a smartass here. Do searches for military coms, hurricane nets (very busy at the moment), utilities listening, or whatever. You'll find some web sites with lots of info. You can quickly take the paths that interest you, better than following a random list of links that we might provide for you here.

You don't have to be neurotic to be an SWLer, but being neurotic helps if you want to participate in this newsgroup!

Happy listening.

Yeah, a lot of portables that came out during that era had the handles. Sort of a pseudo military rack handle look to 'em.

Not exclusively. The forward handles, were common on radios with
a high profile and gross weight. In the event of a tip over, they
prevented the knobs/switches from being crushed, broken or the face
cracked.

It doesn't take long for those leather handles and leather radio cases
to rot away either.I have a bunch of radios with rotten handles and a
few rotten leather cases.

Yeah,you were suppose to think the more transistors a radio has,the better of a radio it is.I have an old Four-Star (made in Japan) 12 transister AM FM radio here that I bought at a Goodwill store and it has a metal handle on it.I am not sure,but I think I have an old 14 transister radio around here somewhere.I think I own (I think,because I haven't ever counted how many radios I own.I bought two radios at the Goodwill store within the last week or so) about 200 old radios.They are scattered around here everywhere.Some of them work,some of them almost work and some don't work at all.

Body handling: HTML body converted to readable text

Rather than build the entire desk, I use wooden kitchen table, about 36" x 60". [Free]
For shelves I bought some 48" x 36" MDF boards, cut them in half lengthwise, and used 2" x 2"s for posts (glued & screwed on the top and bottom, glued wooden dowels in the middle).
It has a middle opening to fit a monitor.
Placed on top of the table gives a good, strong base for equipment and leaves enough room for a spacious writing surface on the remainder of the table.

I'm no artist, but this is approximately what it looks like:

```
************************* MDF 18"x48"
I I I I (2x2 post)
******* *******
I I I I
*************************
```

Indeed. On a side-by side comparison I could make the SW8 sound just
as good as
the Grundig using an outboard speaker. Even with the extra speaker,
the Drake/speaker combo
was less than half the size of the Grundig, whose construction quality
leaves
a lot to be desired (remember that tuning knob?)

I wonder if this is really true. I've never used an SW8 and I know that there are some similarities between it and the 800. However, based on what I've heard about the SW8, I thought it (at least in its later incarnations) was supposed to be in a different 'league' than the 800 performance-wise. Is this incorrect?

Steve

Other than case size and build quality, the Sat 800 is basically a post
'96 SW8.

They both have the unusual characteristic of displaying USB as L|SB.
(If that doesn't show up right, it's an L with a vertical line next to
it to create a U)

There may have been a preamp added to the whip on the 800.

But if I was considering buying one, I'd go for the SW8 in a heartbeat.

I tried them at 0245 and didn't hear them. If they were being broadcast
via China, as has been suggested, they would be audible on the west
coast, so they're likely being broadcast from a site in Iran.

Well, I'm surprised. I guess my understanding of the SW8 was a little overblown. But as my old uncle used to say, it's good to get surprised once in a while.

The point I was trying to make is that using minimal differences in stats is not a good way to demonstrate which is the superior raido. There are statistics and then there are statistics.

Radio Six from 6.00 - 7.00 UTC

IRRS Relays on 13840 - 15725 and 5775 khz

This Saturday morning the IRRS will be on 15725 kHZ using 50 kW
(Sat only for the time being)

Listeners in the Americas, Australia and NZ may tune in for DX
reception of this program.

This broadcast will be in addition to our regular broadcasts to
Europe on Sat & Sundays on 13,840 kHz from 0900-1400 CET
and daily on 5,775 kHz from 2100-2230 CET
(sign-off at 0000 CET on Fri & Sundays)

Please check our latest program and frequency
schedules online at :

http://www.nexus.org/NEXUS-IBA/Schedules

Reception reports by email are very much appreciated

Please email reports@nexus.org Thank You.

Do you have an opinion as to whether the R75 is superior to the AOR 7030+ for DX purposes? I ask because the 7030+ and the R8B are usually described as about even in this regard. (I'd actually give a slight edge to the R8B, but that may just reflect some of my own personal preferences.) If this is correct, and if the R75 "beats" the R8B, then it should also beat the 7030+.

Does that seem right to you? If so, which receiver currently on the market would one have to buy to beat the R75? An RX-340 maybe?

I cant answer that one... I have no experience with the 7030+

The Hurricane Watch Net is currently active on 14325. On present course and speed, Emily will come dangerously close to the southern shores of Jamaica late Friday night. Any slight track movement to the right suggests a possible direct hit. Even with a near miss as presently forecast, with the strongest winds on the right side, and considering the
mountainous terrain, there could be a significant impact.

No sooner did I post this the net went down. There are no new activation plans
posted at this time but I'm sure they'll have something up soon.

4169. All India Radio to vacate 90 metre shortwave band

Newsgroup: rec.radio.shortwave
Date: 2005-07-15 21:43:33 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3jqp00FrgjkiU1@individual.net>
Source record: 27807

Friday, July 15, 2005

The website DXAsia reports that All India Radio is going to vacate the 90 metre band altogether in favour of 60 metre band for domestic shortwave services. This means Shimla on 3223kHz, Bhopal on 3315kHz, Delhi on 3365kHz and Gangtok on 3390kHz will soon move onto the 60 metre band. It is expected that there will be some adjustments on the present 60 metre band usage by All India Radio.

I sure wish AIR would send my Gangtok QSL. Guess it's time for a f/up report.

There are no bids yet on that GE radio, and I'd buy it in a second, if I did not already have one of these excellent instruments. I prefer it to any recent Superradio I've seen, and the sound is pwerful and clear. Constructon includes a die-cast frame as a speaer baffle and antenna counterpoise. This is no piece of junk like the new Superradios; tuning is smooth and spread out well, even into theupper end of the (non-expanded) band, and it is stable, not drifting off like the new SR's because of crappy mechanicals and microscopic bandspread. I have had this one for maybe 5 years, bought it at a garage sale for $10 and used it daily ever since (like right now). There was an excellent website telling the development and some design principles of this radio, but I cannot find it right now. It was written by one fthe cheif designers and also tells of the state of GE at the time. Very interesting. This radio was intended from the start to be a classic for its time and beyond. If anybody has the model number, use that for a Google search and the site will show up. There is no model numer on the radio, but Iran across one on another radio site and went from there. I'd gladly spend $30 or more for this old radio, it is so good. Don't miss your chance (no, that is no mine on ebay, mine is playing softly on the table on my back porch, like it is every day). And, I am not selling mine, don't ask.

I noticed that Li has responded to every post I made last night with his usual claptrap-except this one. What's the matter, Li, did I hit a little too close to home? Afraid to admit that you're a modern McCarthyite, that you're an ideologue who just switched ideologies but remained as rigid as ever, and that you have a rather obvious agenda, one that has nothing to do with shortwave listening? Answer the questions, including this one: Do you listen to SW or not? Are you just here to spread your propaganda, and sneer at everybody who is sick of your China bashing?

Sure, it was China who sold the mujahedin shitloads of Stinger missiles
and provided all sorts of other support to them. Sure, Islam is just
another form of communism, and Osama worships Mao.

Says the guy who lives in a desert. Do you realize that if oil became unavailable, LA's food and water supply would dry up almost immediately, forcing liberals who wouldn't hurt a fly to fight off gang members bent on literally eating you alive? You guys have no natural sources of water (ever seen the Los Angeles River in summer?) and no desalinization plants. Your environment is completely paved over, leaving no place to grow food even if you did have water. You are completely dependent on outside sources of sustenance in order to survive. I, OTOH, live among some of the richest farmland in the world. I have lots of water and places to grow food (if I had to I'd tear up the lawn and plant veggies). If the fan really does hit the shit, who will do better? I'd love to see libbie David trying to talk gang members out of killing him (I feel your oppression, etc) for food. After all, you can't actually fight them off, since you don't own a gun.

My agenda? To expose people like YOU who have nothing better to do with a newsgroup than to post off topic bullshit. I shouldn't even be debating you, but I have nothing better to do. I suppose we all have our prejudices and agendas, but right now I just want you to go away and let us discuss SW. AFAIK, nobody here bothers to listen to CRI.

Yes, the CCP is dangerous if you live within China. Like all ideological dictatorships, the CCP heavily oppresses its own people and strives for regional superiority. If I was in Taiwan, I'd be worried. But the only way they will pose a threat to the US is if the US actually defends Taiwan against a Chinese invasion. I doubt this will happen, since China is so economically important to the US. Besides, all our troops are tied up in Iraq. We'd likely say to Taiwan "sorry, guys" and there'd be no more Sangean radios.

But the motives and agenda of the Party isn't what's being debated here. It's YOUR motives and agenda. I don't make repeated off topic posts bashing a specific people or country (David bashes the US, you bash China, Ace bashes everybody). So MY agenda isn't the issue here, since I don't shove it into the faces of newsgroup participants. I WILL say that I do NOT belong to any far left/liberal/commie organization, as you seem to assume that I do. I'm not paid to chase you out of here, I do it because I'm sick of your off topic China bashing posts littering a shortwave radio newsgroup. YOU are the one shoving YOUR agenda into everyone's face, and repeatedly pulling everybody off the topic of shortwave radio. YOU are the one who keeps changing your handle to avoid a well deserved place in our killfiles. YOU are the one who keeps bringing up the topic of China, a topic that has nothing to do with SW unless you want to talk about CRI. YOU are the one obsessed with fighting Communism, probably because you were once a Maoist (by your own admission) and now feel cheated of all those years, so you want revenge. Well, take your revenge to alt.culture.chinese and leave us alone! Do you even listen to shortwave? Do you care that you're off topic, or are you, like David, so full of hubris that you have arrogantly decided that

your agenda is more important than the real point of the group? Answer
the questions!

Last time I heard them was in the early morning Mideast time (around
0400 UTC) on a freq I can't remember. Their signal had a loud hum, like
an old tube radio that has a capacitor about to blow. I've also noted
Egypt with similar technical problems.

Uh, no. You get your water from the aqueducts, run by pumps.
>
> What you are doing is using the Louisiana Street fear mongering
> tactic. What a fucking creep.

It's not "fear mongering", it's reality. What would you EXPECT all those gang members in LA to do once the food and water run out? They'd do what they know best, and that is killing people.
>
> Label anyone who dares challenge the insanity as an ideologue with an
> agenda. My only objective is to stop the madness.

You ARE an ideologue with an agenda. That is obvious to everybody except you. What you don't realize is that "stopping the madness" would lead to even MORE madness, especially from people slowly wasting away from lack of food and water. The human body can only survive without water for seven days. Only 3% of the American population farms, or even knows how to grow their own food. The rest are totally dependent on the big corporate food conglomerates for survival. That includes you. Food doesn't come from a grocery store, and water doesn't magically appear in the pipes. Without food and water, you die within a week.

I never bid on anything on ebay or any online auctions.Now,if a seller on ebay has something I am interested in and if he or she includes his or her email address,I might,just might,email that person and make an offer,take it or leave it.Actually,I despise auctions.

I own an old Sears Travler big old heavy,and I do mean heavy,multiband radio that is outstanding at picking up long distance AM radio stations.I bought that radio for $2.00 at a Goodwill thrift store store about eight years ago.Trouble is,the on/off/volume control has just about gone bonkers.I can get it to work,but I have to mess around with it for a hundred years.I am hell when I am well,trouble is,I stay sick all the time :{)

If you live in such a good neighborhood, why would you have to lock up
trash cans???

Probably because of the jigaboos!

At 4:00EDT (22:00Z) today I heard what appeared to be
some sort of medical emergecny comm. Very weak and
fluttery. Right t the lower limits of my equipment.
Ic ould make out every other word or so from one
station. And very excited YL/SYL. I could just tell
there was another station responing.

My first thought was I had received a "State of Alaska
emergency HF channel" comm. My first. But given the very
bad band conditions, I somehow doubt a most likely mobile
could make it to here.

Is this freq still asigned to stte wide Alaska emregency
service?

Does anyone know of any other service that might use
5167.5KHz?

I didnt say the unemployment rate went down, it was reported (by an NPR station)
to be at 5%.... big difference

> > the stock market closed at 10,6xx close to a high back at 9/11/01
> Oh joy. The Dow has been flat for 5 years.

Actually if it werent for all the .com stock BS that went on in the late
90's the dow is pretty close to where it should be for a healthy economy.
Allan Greenspan saw what was going on and raised interest rates 6x's in less
than a year to put the brakes on the market. It worked, the market was so
overvalued according to the PE ratios that it went thru a major correction
which as far as Im concerned was needed. Then 9/11 hit and really shook
the markets. It is now close to where it would have been if the markets would
have been more traditional throughout the 90s. The fact that has been flat for
5 years is not all that statistically significant, its been flat before for longer periods
of time and it has always come out of it.

> > inflation is almost non existant
> Real wages have been dropping since Reagan. Middle class under
> attack.

No way, this is your fantasy

> > housing starts are going thru the roof
> Housing is a function of population. Always goes up.

Do you really believe your own BS??????? Housing starts are a function
of the economy not population. If people dont have money to spend they are not
going to be buying houses. In many parts of the US they cant build houses
fast enough, they are sold before they are even completed. After Carter left office

with the economy in shambles you had to practically give your house away, nobody was buying houses. Housing starts were almost nonexistant because few people had enough money to buy a house. " Housing is a function of population. Always goes up" What a dumb ass thing to say

> > factory orders are up
> For bombs.
---

laughable, simply laughable. Sheer idiocy

> > Yep,,,, its over
> Our collective lifestyle is not sustainable.

Yea lets all go back to living in caves and tents. I have wasted far too much time on your idiocy.

Michael:
BTW, I agree with you that the R-75 is a pretty damn good buy for the money. The only place we don't agree is that it's SSB perfomance is somehow better than the kilobuck receivers. They have all the ECSS tools too. The real shame is that all these manufacturers apparently don't think SWL has a future and have dropped out.

Yes and that NRD interface is very computer controllable. By that I mean
you can set all the user functions through the RS-232 port as well as the
front panel. Even the NRD-535Db bandwidth control unit could be set to just
about any bandwidth from 6 KHz to 500 Hz in 10 hz steps. I still find the
NRD receivers to have the best 'feel' of any of the ones I have owned.
Great tuning knob and easy to use controls.

4250. Why are so many sw receivers being discontinued?

Newsgroup: rec.radio.shortwave
Date: 2005-07-16 04:16:17 UTC
From: Alan Dye <alandye@pacbell.net>
Message-ID: <lS%Be.2959$mN1.2166@newssvr13.news.prodigy.com>
Source record: 27886

Hello All,

First Yaesu discontinued the FRG-100
Then Icom discontinued the IC-r75
Then Drake discontinued the R-8B

All within the last two years.

Two questions:

If a person wanted a decent tabletop in the $500-900 range and didn't
want the Grundig boom-box model what would he get?

Secondly, why are they all being discontinued?

Alan

Much of the discussion this week has been about R75. And that discussion began over the observation that the announcement of R75's discontinuation may have been premature. As was the announcement of FRG-100's discontinuation a couple of years ago.

Either is a decent receiver. And both fall into your price field.

The exit of manufacturers from SW has to do with shrinking customer base for SW hardware. SW is declining in use, people are exiting the hobby for, among other things, satellite radio and internet listening, so there are fewer sets being purchased.

Source record: 27891

How do I dissamble this unit? I was able to remove the back panel, and I have removed the screws from the bottom of the unit.
What I need to do is clean the frequency range switches. The PLL has some unlock problems, and the only way I can get at them is to take the unit out of the case. Also, does anybody on this group have any kind of service info that they can scan and e-mail to me? I would be glad to pay for the effort.

1) You're on the wrong track taking the bottom screws out. Put them back in.
2) There are six screws holding the front panel on. You'll need a long Philips screwdriver, 8" or more shaft, preferably with magnetic tip to pull the screws out. Without the service manual, you might be able to figure out which ones they are (two are inside the battery compartment lid, but the others are harder to get to.)
3) Buy the service manual for $19.95 at www.manualzone.com/. If you own this radio, you should have one.

This is a very service-hostile radio. If you do go through the trouble to take the front panel off, use that time to replace all of the bulbs.

I already checked that website.....it appears they only take PayPal, so that option is out. I get so many fraudelant e-mails from PayPal informing me about suspicious activity on my account. I don't have a PayPal account, so I will let it rest there.
The only other source is A.G. Tannenbaum, but they don't seem to answer their phones.
Any other sources? Also, I did see those screws for the front panel, but I need to remove the whole assembly so I can work on the synthesizer.
It seems that the LO output from the VFO droops at the high end of the tuning range. When I tune up above "800" on the mechanical dial, the synthesizer goes out of lock. This is on all bands, when they kind of work.
I believe that this synthesizer is a dual-loop hybrid vernier synthesizer. I just need to find out where the sampling point for the VFO is.
I do have a long Phillips head screwdriver, so I will pull it apart today.
Hopefully, the top of the unit separates from the bottom; that is all I need to pull off.
Thanks for the info!

Pete

I did manage to get five of the screws out, but there is a hidden screw on the right side of the front panel. The back panel has an illustration depicting that the screw is just above the front end module, but it appears to be hidden. Does anybody have any ideas?

I'm not saying we wouldn't get our hair mussed-up a little. It's
gonna happen. Iy'll be worse if we pretend we can continue on our
present course.

''The first aqueduct project began in 1905 with a budget of 24.5
million dollars. With 100,000 workers employed in its construction,
the Los Angeles Aqueduct was finished in 1913. It consisted of 223
miles of 12-foot steel pipe, 120 miles of railroad track, 2
hydroelectric plants, 170 miles of power lines, 240 miles of telephone
line, a cement plant, and 500 miles of roads. The aqueduct used
gravity to carry the water, so it was relatively autonomous and
cost-efficient. Apart from a dam failure in 1928 that flooded the
Santa Clarita Valley and most of Ventura County (resulting in disgrace
and financial ruin for Mulholland), and an incident of sabotage by
displaced Owens Valley farmers a few years previously, the aqueduct
system has worked quite well throughout its history. It was built so
well, in fact, that to this day the city still uses it to transport
water. The second Los Angeles Aqueduct was completed in 1970. It
carries water 137 miles''

It ain't just SWBC that's declining. A lot of MilComs are now via
satellite. Triple One Upper ain't what she used to be.

Speaking of China, I tuned in R. Taiwan last night (11.875 just after 2:00Z). I've never really listened to them before. The program was commentary, mostly concerning the war in Iraq. It was pretty much-anti war, anti-Bush, the war was ill advised, Iraq was not responsible for 9/11, etc. Also, critical commentary about the U.S. military's recruiting policies on high school campuses.

I REALLY don't want to throw these topics up for debate. What has me miffed is: Isn't the U.S., and currently the Bush administration, the only thing that prevents China from taking over Taiwan? What are those folks thinking?

You're probably asking the wrong question.

THose receivers have been around for some time. One thing that came
up with the R8 was that getting parts for it had become problematic, or
was about to be so. If they can't get the parts, they can't make the radio.

So it's not that those receivers have been discontinued. Your question
would be better phrased "why don't these manufacturers make replacements
for the discontinued receivers".

There is a movie titled "The Yellow Rolls Royce". It's three short stories about the lives of people while they own a particular car.

See:

<http://www.imdb.com/title/tt0059927/>

The Springfield plant was open from 1921 to 1931.

Springfield cars command a premium today because back when they were being built, folks wanted the ones that were made in England. Total US production was less than 3000 cars.

I'm not aware of any credible claims that ones from either side of the pond were more reliable.

The Springfield factory's Roll Royce official explanation in limeyland was Rolls Royce cars weren't selling too well in America.(now I ask y'all,were they or were they not?) At the Rolls Royce factory in Massatwobumps,they were useing some American made parts.Go figure.I have stacks and stacks of books here about antique automobiles.

Hi Brian!

Yeah, I love the way the solid feel of the NRD-525 controls. It's a well built receiver and it pulls signals out very nicely. The only problem I have is the audio of course. Even thru great speakers, it can sound muddy and flat. Not good fidelity even with a very wide filter. Other then that I like my 525 a lot but use the R75 most of the time.

Hi Peter

Our society has become so dumbed down by terrible public schools and mass migration of 5th grade educated aliens. So, they don't have the capacity nor the comprehension to be even remotely interested in SW.

I know you don't have to be the most intelligent to operate a receiver, but to know about it and be interested in it you must have some decent education and culture.

We live in a hip hop, lip syncing, shallow society now. Culture is all but gone.

Rolls Royce cars have always sold well in the USA.

The problem was many people didn't believe the Springfield cars were as good as the ones made in England.

So even though it meant paying an import duty, people would request the ones made in England. So it didn't make sense to keep the Springfield plant open.

1931 was also the year they bought Bentley.

...as a NRD-user you *should* know: Run the audio from the LINE-out
through a decent audio-amp or an good active speaker with seperate tone
controls. Line-out level is set by a pot accessible on the bottom side
of the 525.

>
> --

Hiya

The IC-R75 doesn't have any real "statistical" advantages over the radios that we have been comparing it to. I prefer it for ECSS/Utility/DX'ing/HAM over the R8 series primarily due to the twin pbt. It is not a "miracle" feature, but I find I can use it to make any signal that is strong enough to hear good enough to listen to. The 1 hz synthesizer is also handy as are the multiple steps of amplification.

And... It cost less too :-)

One of my friends has an R8, R8a and he recently purchased an R8b. He also has a mint condition Kenwood R-5000. He has also used my R75 for several weeks when we did receiver swaps. Given the IC-R75 twin pbt and the vaunted R8b ssb selectable AM sync, his favorite radio to use is the R-5000. He just likes it. So, I'm sure the larger part of what radio is the better radio can be determined by the most important feature of any radio. The user.

I'm also disappointed that there are fewer and fewer tabletop models being produced. I dont think manufacturers feel that sw listenership is on the way out, though. I'm sure they realize that sw is still a widely used and practical medium for broadcasters to reach the third world. For the most part, listeners in third world countries tune in to get news and information. They aren't into it for any "hobby" appeal. They just want the info that they couldn't get otherwise. It would go to reason that third

world listeners wouldn't be in the market for rigs like the R8b, IC-R75 or NRD-545. They would be well served with a capable and economical portable like the ones being churned out in China by Degen. As far as most of the western/modern world is concerned, with internet and satellite communications widely available, sw listening for content is a second string medium. It is less reliable and it is always of a lesser quality as far as the clarity of the transmission. It is true, however unlikely that the internet could go down and satellite com could be interrupted for any one of a number of reasons. If that does occur, you can count on it coming back up in a fairly short time. Not to mention, solar occurrences that are intense enough to wipe out satellite communications would also wipe out hf propagation. So, for getting information of all kinds, you dont have to worry about needing a pricy tabletop sw rig. It isn't 1920-1980 any longer. For the most part, the only ones left in the western/modern world who want an expensive sw tabletop rigs are hobbyists like us. So, I can see why fewer and fewer manufacturers are sticking with making tabletop sw radios.

4314. Communist Party's Efforts To Control and Take Over of Media Outlets

Newsgroup: rec.radio.shortwave
Date: 2005-07-16 16:48:16 UTC
From: Whats_Your_Agenda <JiangZemin@ccp.gov.cn>
Message-ID: <11dieotb5vhum69@corp.supernews.com>
Source record: 27943

SYDNEY - During the Forum of the Chinese People on July 10, former Chinese diplomat Chen Yonglin spoke for the first time about the specific methods used by the CCP to control overseas Chinese communities.

These communities continue in fear of the CCP though they live in the free world. Chen pointed out that the CCP's efforts in this regard are consistent with its plans to control Australia, also known as its "great border" strategy.

...

Control and Take Over of Media Outlets

Chen expressed that the CCP employs strict media control and censorship not only within China, but also within the Chinese communities scattered throughout the free world. Diplomats are heard making the same speeches in foreign lands, spreading the same CCP lies to the overseas communities.

He said, "In the past month some local Chinese media have not been very sensible in reporting my defection. One of the main reasons is that they are influenced and controlled by the CCP's General Consulate. Chinese media companies run on a smaller scale and are easily enticed by the CCP's economical interests."

Chen highlighted the three main avenues of media control: direct sponsorship, advertisements, and purchase of front-page coverage and broadcast time.

Some Chinese language newspapers publish editorial articles written by CCP members, showcased on special pages set aside for this purpose. This format has been well received by Beijing, and has become a frequently used propaganda tool. The head of the Publicity Department of the CCP Central Committee has visited Australia and been very pleased by the media situation that he observed - that the voice of the CCP is reaching far into the Chinese communities. There is also an element of economic advantage for these CCP compliant media, as they are granted special privileges and access to markets in China.

Chen commented, "I think as a media company, to betray the principle of justice is for sure to betray the readers, to betray the people. I hope certain media companies will discipline themselves, get rid of the CCP's control and become true media, instead of following the CCP down its path to destruction."

Cultural Activities and the Arts are Co-opted by the CCP Propaganda Machine

Chinese cultural arts performances are frequent events in Australia, with famed Beijing opera such as The Legend of the White Snake playing at the

Sydney Opera House, and this is as it should be. There is an abundance of quality art, informed by the rich Chinese heritage, flowing into Australia, and this is a truly beneficial cultural exchange. Unfortunately, the CCP has taken advantage of this established avenue, and routinely sends propaganda pieces in the guise of Chinese art and theater. To give an example, on October 4, 2004, the General Administration Art Group of the Chinese People's Liberation Army (PLA) performed at the Sydney Opera House, in an effort to erase its history of killing, such as its involvement in the June 4th Massacre on Tiananmen Square.

Another point raised by Chen is that cultural exchange should be two-way. When was the last time an Aboriginal didgeridoo ensemble was invited to perform in Beijing?

He remarked, "How many Australian cultural and art groups visited China? The only one I remember was in 2002 when Australia held a week of cultural activities. But every year there are many Chinese cultural groups traveling to Australia to perform."

People in the entertainment industry are making money off of these pseudo-arts, but Chen rightly pointed out that they should check their consciences and see if they really want to be supporting the evil CCP ideology.

4315. Thousands of Overseas Chinese Consulates Workers Waiting to Escape

Newsgroup: rec.radio.shortwave
Date: 2005-07-16 16:49:22 UTC
From: Whats_Your_Agenda <JiangZemin@ccp.gov.cn>
Message-ID: <11dieov105dsg6b@corp.supernews.com>
Source record: 27942

CHICAGO - Li Youyuang (an alias), a former Chinese consulate worker in Eastern Europe talked with The Epoch Times about his views on Chinese defector and former diplomat, Chen Yonglin, and the attitudes of workers inside Chinese consulates.

ET: As a former Chinese consulate worker, what are your views regarding Chen Yonglin's defection [from the Chinese Communist Party (CCP)]?

Li: I think this situation is in fact typical. It seems extraordinary to the general public, but those of us on the inside know that there are many "Chen Yonglins" out there just waiting to happen. It's my understanding that many Chinese consulate workers, especially those in western countries, are just waiting for their chance to escape to freedom. None of them really wish to continue working for a government that is an enemy to its own people. The fact is, that the CCP maintains very tight control over its consulate employees, and guards itself against possible defections, leaving very few opportunities to escape. What Chen did was extremely difficult. The others are searching for all sorts of ways to do what he did, and will continue to do so, though few have successfully managed to escape overseas after returning to China.

Chen is a visible representative of the many Chinese who wish to distance themselves from the corrupt CCP. All can see that the CCP has been opposed by the masses and deserted by its own people, and will not survive much longer. In the near future, I believe more "Chen Yonglins" will surface. This will soon become a very common phenomenon and no one will be surprised.

Overseas Workers Have Been Brainwashed

ET: Chen once said, "Consulate workers have a severe case of split personality." Based on your past experience working inside a consulate, is this the case?

Li: In my opinion, his statement is basically true because consulate workers have to go through brainwashing sessions in China before coming overseas. For example, they are instilled with the "10 Prohibitions on Disciplines For Foreign Affairs," such as the prohibition to spend the night outside the compound, a curfew of 11:00 p.m., the prohibition to read anti-Chinese magazines or newspapers, etc. And what exactly are anti-Chinese publications? Almost all materials that publish the truth are considered anti-Chinese.

If one is caught reading those materials, it is considered going against orders and he or she will face disciplinary actions. If I were to report on someone for reading such anti-Chinese publications, I would receive benefits. All of the workers are well aware of the situation so there is

much fear.

Are there ever times when people can let down their guard at work? Yes, but only when playing mahjong, cards, or chess during recess. People's behavior is most scrutinized when it concerns something specific that is said, what is done at work, and leaving the compound.

Every one of these workers has a conscience and knows the right thing to do, but they are kept from following their own moral guidance, because of fears for their families' well being. They know that there would be economic repercussions for their actions and so they don't dare act.

If it weren't for the brainwashing they would be able to see things from a broader perspective and would find the courage to act.

Chinese Consulates Have Tightened Regulations

ET: As you just mentioned, if the desire to resign is widespread among consulate workers, then following Chen's case, what measures will the Chinese consulates take?

L: I would say that the lives and jobs of all consulate workers in Western countries will be even more difficult and they will be forced to undergo further brainwashing. Beijing's Ministry of Foreign Affairs will send harsh orders for dealing with the situation. The number of rules and prohibitions are bound to increase exponentially, and the barrier between people's hearts will be even greater.

From what I know, the consulates have already implemented tighter security measures. I have a friend who works for the Chinese consulate in New York. A while back, I wanted to meet with him for a drink and catch up, but he said, "I'm very sorry but leaving the compound is no longer permitted at night. I'm sorry. We'll meet some other time."

http://english.epochtimes.com/news/5-7-15/30357.html

4316. Anything for Power: The Real Story of China's Jiang Zemin

Newsgroup: rec.radio.shortwave
Date: 2005-07-16 16:50:24 UTC
From: Whats_Your_Agenda <JiangZemin@ccp.gov.cn>
Message-ID: <11diep05c98nh6d@corp.supernews.com>
Source record: 27941

Never, normally, would someone with the stature of China's former president, Jiang Zemin, have something so basic as the identity of his parents be at issue. But then again, few would try so doggedly as has Jiang to glorify themselves, erecting monuments to themselves and commissioning biographies while tens of millions of citizens live in desperate circumstances.
Yet Jiang is no normal figure, and so it was that a bogus biography of the man, rife with contradictions and heavy government propagandizing, was written under the auspices of a Western businessman named Robert Kuhn, and foisted upon an unwitting general public.

Then just what sort of person is Jiang Zemin? Just what exactly is his family background, and why does it matter so much? How did he go from being a transitional figure who lacked popularity (owing to his narrow, partisan ways) to a full-blown dictator in charge of a massive nation? What lies beneath the veneer of prosperity thought by some to characterize Jiang's reign? And what will be Jiang's ultimate legacy?

Out of a sense of obligation to set the facts straight, we, the editorial board of The Epoch Times, took up the task of collecting all relevant materials and data; of note is the extent of inside information and hitherto undisclosed secrets provided to us by high-ranking Chinese Communist Party officials. The product is a comprehensive book unmatched in scope or detail: Anything for Power: The Real Story of China's Jiang Zemin. While its vision and inquiry are broad, we have done all possible to ensure that this is never at the expense of detail or precision. The stories told herein, so little known to the public, portray in full and as never before the real Jiang Zemin.

The book will soon be published in installments here on the website of The Epoch Times. It is a book not to be missed, for its boldness, candor, originality, and importance.

Yes, that would be CKZU which is audible at times here. The one that I really wish
was still on is CKFX on 6080 which ran 10 watts. That always made for a great DX
target.

Of course not! Especially when I see that somebody from Nigeria and somebody else from Bosnia is using my "supposed" account.
I guess they gave up on sending those "Greetings, I am Doctor Blah Blah Blah" things that offer to let me launder their 5 million dollar inheritance, if I will only give them my bank account number, routing number, etc.
It looks like I lost out on that one. I better move much faster next time I get one of those e-mails. What a good deal! The quick and easy way to file bankruptcy. But wait.....there's more!

That could indeed be true as most everyone comments on the bad audio which seems to always be overcome by the tuning knob.

They DO have a nice feel to them.

It is so easy to place the blame on the schools. Much of the blame also
goes to the parents who don't/won't instill the need for education.
People need to take responsibility and not look for the easy scapegoat.
Parents have a responsibility to their children. The school system is
not a means to escape that responsibility.

> I know you don't have to be the most intelligent to operate a receiver, but
> to know about it and be interested in it you must have some decent education
> and culture.

Does that mean some elite requirements to be a shortwave listener. I
would t hink that all that is needed is a radio, the knowlege of what
might be out ther (to listen to) and the desire to listen.

SW radio can be a vehicle to provide some education, however education
need not be a requirement.

SW may not be declining in use (or it may be). Degen and Tecsun seem to have found enough of a market for them to produce several new portable radios. Granted, these are near the low end of the market.

The problem comes with the supply and demand for higher end receivers. Much of the worldwide listening audience may not be able to afford several hundred dollars for a tabletop receiver. The big market for these receivers may be the US and Europe.

There may not be a decline in use of receivers. A good SW receiver will last several years. There have been many good receivers at various price and performance levels produced of many years. Most people may have found a receiver that meets their needs. If so, then there may be little demand for a new receiver. If one has a receiver that meets their needs, there is little incentive to spend big bucks to buy one that can only offer limited improvement over what they already have. The decline that is visible is in the sales of receivers.

For the manufacturers, they need to see that there is a market where people will buy a new product. If they don't see a market, it is very hard for them to invest the money to develop and market a new product. The cost to bring a product to market is fairly high and the manufacturer must be able to pay that cost from the sales of the product.

I hope some manufacturer will see that there might be demand for a new higher end receiver. That receiver would need something that sets it apart from others on the market and what folks already own. A 'me-too' receiver will not be able to generate much in the way of sales.

I agree that the CCP is an evil organization, that they certainly
oppress their own people and want to dominate Asia and conquer Taiwan-by
force if necessary. The main point of contention here is whether they
are a driving force behind Al Qaeda. Li implied that the Chinese ordered

the 9-11 attacks and that they basically run the terror apparatus. That is ridiculous, but Li believes it. China may be *complicit* in terror by giving financial aid to Iran which is diverted by the mullahs for terror, but that's a far cry from planning 9-11. He questioned whether Al Qaeda was born out of the mujahedin movement that fought the Soviets in Afghanistan and which was paid for by Reagan, calling this FACT communist propaganda. He even implied that the terrorists are closet commies, something that is totally off the wall. The CCP does much evil in the world, but Islamist terrorism is one thing they are NOT behind.

It looks like I will need a service manual for this radio. I cleaned the switches and it does work better, but the PLL is still in need of adjustment.
On the ranges below 5MHz, the system goes out of lock most of the time. Same thing when you tune above "900" on the tuning dial. I would surmise that there is probably a VCO coil that needs adjustment, and that right now, the system is set at the edge of its capture range. I'll let you folks know what the problem is once I finish with the repair.
Oh, I found out the reason that I couldn't find that final screw..........the documentation indicated that this screw was at a point in the chassis that was 3 inches higher than it really was!

> not a means to escape that responsibility.

Agreed, but the parents are part of the problem too. All they care about
is getting the easy A, getting the kid into Harvard so they can put
pressure on the poor professors to hand out A's because that's the only
acceptable return on their investment, and then making sure the kid gets
an MBA so that he/she can go straight to the top. It's all part of the
culture of instant gratification. Getting an actual education has been
kicked to the side in favor of getting an easy degree in order to get a
high paying job. It's the high paying job that's important, not the
actual education. 35 years ago, college students said in surveys that
the most important reason for a college education was to become a better
person, to broaden one's horizons, and all that "hippie stuff". Today
all the kids care about is getting in and out as fast as possible and
getting to the corner office as fast as possible, along with the Lexus,
the hot secretary, and the mansion. The whole culture has become
coarsened, and the only thing that's important is making a lot of money,
not becoming a better person.

> need not be a requirement.

SW radio tends to have more intellectual programming than say network TV. In America, the breakout TV hit of the summer is an abomination called "Dancing with the Stars", where washed up celebrities pair off with professional dancers in order to win a multiweek dancing competition. The costumes are titillating and the set looks like it came out of a disco hall. A culture that makes "Dancing with the Stars" a hit is not one that is interested in crackly, fading radio broadcasts on Ethiopian culture and news broadcasts that lack car chases and murders du jour. All of American culture caters to the lowest common denominator, and SW radio tends to set its sights higher. That's why hardly anybody in America listens to SW. People have been dumbed down by many different factors over the past 30 years, and they're simply not interested in SW's highbrow fare. It's a tragedy, and it may yet be the end of us.

And behold, the Lord of Time cast a fearsome spell on Wiseman such that all of his NIM Busters posts would be colored green. He then banished Roger and all of his works to Roger's Realm at http://the-forum.us/nimbusters/forum/forum.php?board=10.

The daleks saw it and rejoiced, for they knew the depths of depravity into which the Insane One had sunk, and they knew that the Insane One needed to be isolated, marked, and banished from the company of mankind.

The Lord of Time had prevailed at last, and the daleks celebrated by drinking Bud Lite and eating Papa John's Spinach Alfredo pizza with extra anchovies, jalapeno peppers, and portabella mushrooms.

The world was good again, and God was in His heaven.

But the Pale Dalek was down with indigestion.

I figured out the problem with the radio. I needed to clean the 1MHz tuning ranges. The interesting thing is that these ranges are not controlled by a switch, but by an indexing mechanism that tunes a miniature multi-gang tuning capacitor in what appears to be a form of the Wadley Loop system that the Yaesu FRG-100 uses.
This is a form of a hybrid synthesizer that uses a 1MHz comb generator as the reference. When you are changing the 1MHz tuning steps, you are essentially tuning a free-running oscillator. When you tune this oscillator to within the capture range of the PLL, this oscillator locks on to one of the harmonics of the 1MHz comb generator.
I still need to figure out why the system goes out of lock at the extreme upper end of the VFO tuning range, but I think that the amplitude of the VFO is starting to droop at this end.
I think that the RF output trimmer and padder need to peaked while watching the output on an RF Voltmeter.
A piece of cake.....I just don't know how big of a piece of cake it will be!

We were about ready to atrribute this post to Mr. Davies.

The wit, the grammar, the topic .. it had to be him.

Then there was a mention of drinking "Bud Lite".

Everyone knows Mr. Davies is a devout Baptist tee-totaler.

What would profit Stair say to the idea of Mr. Davies bending an elbow to get a snoot full of Bud Lite .. ??

We reckon it was one of Mr. Davies' daleks who did the post.

But if this is a good report, we're glad for Mr. Davies and all his daleks and the entire staff and management of Papa John's.

That pizza - we're sure gonna hafta try one of those from the local PJ's.

But we'll chase it with Diet Coke instead of Bud Lite.

Define 'portable 'and 'best'.

My NRD-525 in conjunction with a batterie and antenne for sure makes a
pretty 'fine' portable....
...surely not the 'best' though in whatever regard.

Portable by whom? A baby ? An athletic man?
What size? shirt-pocket-size? Portable in a handbag? Portable on a trailer?
External antenna connector is a big issue. But how to walk around the
block with a 50ft slinky antenna?

best in portability?
best in batterie consumtion?
best in sensitivity?
best in selectivity?
best in 'ergonomics'?
best in noise floor?
best in features?
best in sound?
best in SSB?
best for broadcast listening?
best for utility and amateur radio?
best in price?

Some of the likes exclude each other. So great selectivity with great
sensitivity allways results in much power consumtion....
Every good analog radio beats a pll-synthesized radio regarding
self-made noise floor
What ergonomicsdo you like best? tuning with up-down knobs or with a dial?
Too many features are a natural enemy of ergonomics.
So there is at least a handful of 'best' portables regarding of what
someone prefers most.
Among those is:
The Sony ICF-2010
The Sony 7600G and GR
The Sony SW77
The Sangean ATS-909

The Drake SW8
The Grundig/Eton SAT800
One of the Degen radios when it comes to the price.....

So PLEASE be more specific what YOU want!

> Define 'portable 'and 'best'.

The question is ambiguous for a reason: to be interesting. You have one vote for one posting. Pick your favorite portable and vote. So far Sony ICF-2010 leads the way.

Oh, one should 'vote'..... just another troll......
You should do some newsgroup search.
This question is asked every once in a while.

What is the "Qualification for best"?
TEchnology to dollar ratio?
Strict technical quality?
Greatest impact to a international listening audiance at a time when
SW was the ONLY mediem availale to axis nations? Or during the cold
war?

Yeah I am trolling... but with good cause as there does not seem to be
a lot left on SW to north america in English from world broadcasters.
If I (or you) were bi-lingual or tri-lingual from Asia or
Central/South America I would have a different question or answer.

The best portable for ME was a SONY CRF 5090.
I used this Sony extensively while serving in Southeast Asia. Great
sensitivity, excellent sselectivity and had a dial resoltion for
tuning that was pretty hard too beat for a slide rule tuning dial.
WWV, , Austrailian time signals at 12mhz as well as foreign
broadcaters of know frequency could be retuned pretty acurately. You
could extrapolate to within 25 KHZ with out to much difficulty.
That was before the time of digital readouts and just finding a
frequency plus or minus 100khz was almost unheard of on a portable.
ZenithTrans Oceanics and Juliette World band and others served well
too.

Sorry if this was not quite the direction you wanted the thread to go.
Your question was really pretty open ended!

I suppose this is one of the "every once in a while times".

I am not a troll. What are you talking about, you'nuts ?! I am a hobbist, pretty good in RF electronics and quite fond of my hobby. I built my first AM radio (7 transistors) when I was 7, for Pete's sake! When did you build your first? A piece of advice: think before trying to offend somebody.

A receiver popularity poll is not going to give you an updateon the
state of the art. If that is what you are looking for, then just ask it.
You may get your answer sooner as 1) people will be reponding to what
you really want, and 2) you won't get labelled as a troll.

Not a lot has changed in the past several years. Synthesized radios have
become less expensive. There is more integration of function that
generally drives costs down. The market is dominated by imports from
China and Taiwan.

Skipping the detail really won't tell you much.

craigm

P.S. Say you want nothing and then adding "I just want" could be confusing.

There's always been this split. Hobby types who are more interested
in the where rather than the content, and who not only may be interested
in great equipment, but that equipment can be an end as much as a means.

Then you have the people who are only interested in the content. They
emigrated from another country and want to hear news from home, or have an
interest in world affairs. The radio is only a means to that end.

I'm not sure how the latter group was served decades ago, though there
were all those multiband portables you could buy at the neighborhood store.
The Big Name shortwave manufacturers were sold in relatively isolated spots,
ie ham stores, and while you could get cheap ones the good ones cost
a pretty penny.

Nowadays, as you point out, there are quite a few shortwave receivers
available, and available all over the place. I suspect they tend to
be better than the cheap receivers of years gone by. At the very least,
they are easier to use. None of that calibration where there is a mark
every 500KHz (well, it's sort of closer to the 9 than the 9.5); you get
digital readout so you know you are tuned the the right frequency. One might
argue that digital tuning, plus availability, has meant more people tune
into shortwave, or at lest buy such receivers in order to tune in (though
perhaps they don't stick with it after the initial tuning).

Of course it's a loss if the relative high end receivers disappear. But
they cater to a relatively small market, ie those who can afford such
receivers and those who actually want them. Maybe there is a decline

in those numbers, so there is no longer enough of a market. But it could also mean that the receivers have priced themselves out of the market, that they can't be manufactured for the limited numbers at a price that will bring in enough buyers. For that matter, the available of decent receivers from Sony and Grundig may impact on those expensive receivers. If once upon a time one could buy an S-38 or an HRO, the performance level is pretty black and white. But if you can get a fairly decent receiver for $300, like a Yaught Boy 400 or the Sony 7600, it may be good enough for far more people than that S-38. And that may cut into the pool of buyers for the R-75 or the Drake.

The former group seems to be shrinking. Passport has said that most SW
listeners listen to just a handful of favorite stations.
>
> I'm not sure how the latter group was served decades ago, though there

Well, back in the 1930s, a six tube table radio (portables were rare
because of the tremendous power demand of the tubes, requiring 90 volt
batteries in some cases) that cost a modest amount usually had a SW
band, usually 3-12 Mc (cycles back then) or something similar. The
cheapest radios only had mediumwave AM, usually called BC, but the next
step up in price range usually had a SW band. Console radios, which were
big, 5 foot high radios with over 10 tubes that sat on the floor and

which were practically furniture, usually had several SW bands, covering
from 1700-1800 or so kc to 25-30 or so Mc. Shortwave listening was quite
popular during World War 2, and sophisticated propaganda stations were
operated by both sides. Even in Nazi Germany console radios usually had
a couple SW bands from what I understand. The kicker is, few Germans
could afford them.

When transistors came on the scene the familiar multiband portables were
built, including the Transoceanic, the World Monitor, and the Japanese
brands. They were heavy, had poor dial calibration, and had other
technical issues, but it didn't take much to tune in the blowtorch
stations operated by the Communists, and that was the main attraction.
Nobody ever admitted to listening to Radio Moscow of course, but it did
have listeners in the West, usually interested in the amusement factor
and the chance to hear the Cold War being fought live over the air.
During this period the big name SW radios were mostly for hams.

Compared with the big multiband portables of the 60s, today's radios are
well built, incredibly accurate, and have more features. They're also
smaller and lighter-not to mention cheaper. A TO cost several hundred
dollars, a pretty penny back then. Today's Degens and Tecsuns can be had
for $50 over Ebay, and a Degen 1102 is better in almost every way than
the TO.

I really think that the market for tabletops is saturated. There's
simply no more demand for them. In a world where a $50 radio will easily

pull in the 4 or 5 stations you listen to regularly, there's little need for a $1800 radio whose main attraction is its ability to ferret out weak signals, a vocation 95% of SW listeners simply aren't interested in. The few who are interested in DXing have a deep pool of used tabletops to choose from. The rest have cheap, well built Chinese portables to buy, and for them, that's all they really need. Tastes change, technology marches on, and the old becomes obsolete. Tabletops are, for the most part, obsolete.

I would disagree with that. There are many features on tabletop radios
that will probably never be found in portables.

Many of the folks in this group use tabletop radios.

There is nothing that acts as a replacement for the tabletop radio.
(Except, maybe the PC based radio.)

Tell that to Wilson, FDR, Truman.... all Democratic presidents during the
World Wars..
```

The Democratic Party was a far different animal then than what it has become
today!

15 years ago it was EAMs constantly, several REACH missions
simultaneously, AF1 and 2, Generals ordering limos and T-times,
personal HF phone patches, etc.

A lot of that stuff is digital via Iridium or other satellites nows a
daze.

I suppose you just put some parts of a kit together and surprisingly
enough got it working?
I can't go with this. It took me 16 before I designed(!) and built my
first (and sad enough the only one) SSB-capable radio with single parts
on my own designed and self made PCB. Before that I was into repairing
tube-radios and usualy made one working by plundering another one for
parts. It was not that easy to get enough old tube radios in that
hillbilly area where I lived when I was a kid. This was starting in the
late sixties at the age of 9 or 10 and transistors were quite rare and
expensive. Soldering prepared kits was much too easy so I can't remember
much of them. Although I put some of those kits of different kind
together in that time before I started my own projekt. "No money for
that playing and time waisting stuff" (as I'm the eldest of 7 children)
was a big handicap for me back then. So what's your point?
I started my education and profession as a plumber and heating installer
then and electronics is still *one* of my hobbies more or less since
then wich comes in right handy in certain situations when repairing
failing electronics on heating systems instead of just ordering a new
"module" or at least to get a system to run temporary until the new
module arrives some days later and preventing people sitting in a cold
